

## Exercise: the place of DMPs within your institution

1. Based on what you've learned about Data Management Plans so far, map out the different research tools and systems in place at your institution that could connect with DMP tools.

Use one post-it note for each tool or system (20 minutes)

2. Choose one connection to work on in detail as a group.
  - a. Identify the information held within the chosen system and the DMP to identify overlaps and details that could usefully be exchanged.
  - b. Describe how and when the systems should connect, based on the overlaps identified above.

Annotate your diagram and prepare to share ideas in the wrap up (30 minutes)
