Introduction

Since 2012, the Association for Digital Humanities in the German Speaking Areas (DHd)¹ has represented the field of Digital Humanities (DH) in Germany, Austria, and Switzerland. With over 400 members, it is one of the largest DH associations worldwide.

The DHd association has organized an annual DHd conference together with different local DH institutions since 2014.² At each conference, an average of around 130 conference papers were presented in the following formats: lecture, panel, workshop, poster, and, since 2020, doctoral consortium.

Usually, after each conference, an individual Book of Abstracts (BoA) is produced script-based³ and is published by the local organizers via the online storage service Zenodo⁴ (see Burr 2017; Stolz 2017; Vogeler 2018; Sahle 2019; Schöch 2020; Geierhos 2022).⁵ These BoAs represent an important showcase for the field of Digital Humanities (see Schöch 2020: V). Nevertheless, the collective publication of conference papers never allowed for individual citation and referencing of individual papers, nor could they be indexed in digital catalogs or used as research data. Potentials of an improved publication strategy as well as of improved scholarly analysis of conference papers have been already addressed by the DHd community (Cremer 2018; Andorfer et al. 2019;

Steyer et al. 2020; Busch et al. 2022) and partially implemented in exemplary fashion (Andorfer 2019; Lordick 2020⁶).

For improving the findability, accessibility, interoperability and reusability of the DHd conference papers in the sense of the FAIR-Principles (Wilkinson et al. 2016), the DHd association appointed a Data Steward.⁷ In this paper we will present publication workflows developed by the DHd Data Steward and illustrate how the collaboration with the DHd community is an essential part of the improvement of the publication strategy within the DHd association. More precisely, we will introduce the DHd Task Force “DHd Abstracts”, which is working on improving the submission and publication processes community-driven.

DHd Data Steward

Central goals of the DHd Data Steward include publishing DHd conference papers as individual publications and making the underlying TEI-XML files, which are generated by the authors during the submission process through the DHConvalidator⁸, accessible in a standardized way for reuse (Helling et al. 2022; Borges et al. 2022).

To this end, workflows have been developed for pre-processing⁹ the respective TEI-XML files of the individual DHd conferences and generating an individual PDF file¹⁰ for each conference paper. In addition, these workflows make it possible to publish the conference papers automatically via Zenodo’s REST API with rich metadata, which is extracted script-based directly from the TEI-XML files.¹¹

With this strategy, 1071 papers of the DHd conferences 2014-2022 have been published as distinct publications in the DHd community on Zenodo¹² under a CC-BY 4.0 license and with individual Digital Object Identifiers (DOI). The published conference papers were indexed by the Digital Bibliography & Library Project (DBLP)¹³ and the Index of Digital Humanities Conferences.¹⁴ Additionally, a strategy for publishing and providing conference papers as reusable research data was developed: for each DHd conference, a GitHub repository was created to make all conference papers available in TEI-XML and PDF format with their metadata.¹⁵ In order to avoid data loss, each GitHub repository is also published via Zenodo and is archived¹⁶ through the “cold archiving” processes (Rau, Helling and Barabucci 2022) of the Data Center for the Humanities (DCH)¹⁷ at the University of Cologne.¹⁸

While these workflows are a step forward in improving the publication strategy of the DHd association, there are still major challenges to address.

Task Force “DHd Abstracts”

To distribute the responsibilities of the DHd Data Steward the DHd association has introduced the Task Force “DHd Abstracts” in 2022.¹⁹ It consists of various members of the DHd community and is particularly concerned with the evaluation of the existing submission and publication process and its documentation for submitters.

Due to inconsistencies in the TEI-XML files the local organizers of the DHd conferences need to clean the TEI-XML files extensively to transform these into a comprehensive BoA. Analyzing and evaluating these inconsistencies is currently the main challenge of

the DHd Task Force and it especially requires the interregional exchange over locally generated knowledge during the organization of the DHd conferences.

The intent is to have a definite list of all possible mistakes in the TEI-XML files in order to develop strategies to prevent them in the future. For example, by creating a handout for submitters to reduce the respective inconsistencies in the TEI-XML files the Task Force aims to support the different institutions hosting the DHd conferences.

In addition, the whole submission process is evaluated and possible alternative tools improving the TEI-XML output, e.g., the FidusWriter (Gebhard 2022), are being tested. Furthermore, the Task Force is facing the problem of inconsistent affiliation details and is working on approaches to implement more authority data into the TEI-XML files.

The work of the Task Force is meant to address challenges and problems that affect the whole DHd community. Moreover, it opens up new possibilities to shape workflows that are part of the making of a community event, in this case the DHd conferences, in a way which involves the community of scholars themselves.

Concluding remarks

This contribution outlines how the original publication strategy of the annual DHd conferences was improved by the establishment of the DHd Data Steward. In addition, it describes the role of the community-driven Task Force in the improvement of both the submission processes and the publication strategy in the context of the DHd conferences.

In our talk, we will critically examine the workflows and processes for pre-processing and automated publication. Moreover, we will discuss further potentials for improving the whole submission process and plead for these tasks to be perceived and solved as a DH community task. As a matter of fact, with our paper we intend to share the strategies we developed with a broader DH community, in order to allow for their reuse. Indeed, they were already successfully reused in the contexts of different conferences in the German speaking areas, e.g., by the vDHd conference 2021²⁰ and the FORGE conference 2021.²¹
