All roads and belts lead to China. The bioluminescence has already been described by the Chinese over 5000 years ago while Aristotle learned about it mostly by his student Alexander's Indic campaign. The Indonesian cultures used luminescent properties of mushrooms as improvised torches as reported to Westerners by the botanist Georg Eberhard Rumphius (Rumpf, 1627 Hessen-1702 Indonesia) of the Dutch East India Company while the Micronesian cultures incorporated luminescent fungi into ritual dress and face paint. In 1655 Olaus Magnus (Olof Månsson, * 1490 Östergötland; † 1557 Rome) as the bischof of Uppsala described the practical use of mycelia-infested bark (Foxfire) by Scandinavians during long winter nights. Well informed as the business collaborator in Indic trade, Boyle proved oxygen consumption in bluish-green "foxfire (Congolese chimpanzee fire)". The glow of those mushrooms is also caused by the decomposition of plant matter while their fungal growth was determined as source of their glow only in 1823. In 1667 Robert Boyle had further shown that light worms stop emitting light when placed in a vacuum while their lighting returns in the air, if they survive the crude treatments of those days. Rudolf Albert von Koelliker (Kölliker, * 1817 Zürich; † 1905 Würzburg) and his former Würzburg assistant Franz von Leydig (* 1821 Rothenburg ob der Tauber; † 1908 Rothenburg) had studied the fine structure of the luminous organs of the firefly in Tubingen in 1857 while Louis Pasteur (1864) and the LGBT Darwinist Sir Edwin Ray Lankester (1847 London-1929 London) in 1870 researched bioluminescence with its spectra of the emitted light included. August Kekulé perfectly trained his Flemish Ghent student Leonard Bronisław Radziszewski (pseudonym Ignacy Czyński as Polish fighter for independence, 1838 Warsaw–1914). Radziszewski became an assistant professor of chemistry at the Institute of Technology in Habsburgian Krakow and later in 1872 a professor of general and pharmaceutical chemistry at Lvov University where he first lectured in Polish language. Radziszewski was the first to report on the chemiluminescence of the solution during self-oxidation in Krakow and Lvov in 1871 and 1877 as the pioneer of Habsburgian researches of luminescence during Karol Olszewski's studies of chemistry at the neighbouring Krakow Jagiellonian University in 1866–1872. In 1885 and 1887 in Parisian Sorbonne and Lyon Raphaël Dubois (1849 Le Mans-1929) found that the crude extracts derived from the common piddock (Pholas dactylus) emit light when mixed, with no phosphorus involved. He discovered luciferin in 1887. The piddocks use a mixture of luciferin and luciferase, which is the basis of all bioluminescent phenomena. Their glows resemble the yellowish-green light of Eurasian Lampyris noctiluca or Dubois' research of American Pyrophorus noctilucus (western Indian Pyrophores) about which Schöttl had asked his students in Ljubljana a century earlier. In 1904

[3511] Aimé Forster, Ueber Darstellung künstlicher Leuchtsteine, *Annalen der Physik und Chemie*, (1868) 209/1: 94-121; Kayser, 1908, 751, 827; Fritz, 1940, 29-30, 179; Harvey, 1957, 147.

[3512] Fritz, 1940, 99, 145; Kayser, 1908, 837.

his consideration of radioactivity persuaded Dubois that the distinction between "matter of life" and “living matter" is superficial.

After copying bird’s flying, dolphins’ diving, moles’ digging mines, torpedo fish’s (electric rays) electricity, hedgehogs’ and wheel spiders’ rolling, the humans finally decided to copy bioluminescent species. The first effective chemiluminescent materials without organic ingredients were synthetic compounds such as laminol (luminol). Its blue chemiluminescence upon oxidation in blood was first described by Herbert Otto Albrecht of Kaiser-Wilhelm-Instituts für Physikalische Chemie und Elektrochemie at Berlin-Dahlem for Ostwald’s *Zeitschrift für Physikalische Chemie* in Leipzig in 1928.

31.8 Research of Luminescence in the Habsburgian Monarchy and in Slovenian Areas

Vienna was never the sole Habsburgian centre of learnings with Radziszewski’s chemiluminescence in Krakow and Lvov, August Witkowski, Karol Olszewski and Wroblewski’s Krakow condensation of gases, Władysław Natanson’s Krakow statistical mechanics, Smoluchowski’s Lvov kinetic theory of molecules developed in 1898, Mach’s Prague University colleague during Tesla’s studies in Prague Friedrich Reinitzer’s (* 1857 Prague; † 1927 Graz) discovery of rodic liquid crystals in Prague in 1888 by collaboration with O. Lehmann. But Vienna influenced other as center of Bošković’s physics and later of kinetical atomism of Smoluchowski’s teacher J. Stefan. The first important Habsburgian luminescence research was published in Vienna by professor of experimental physics the Jesuitical follower of Bošković Herbert in 1773. In Vienna, the research assistant of the Imperial-Royal Mineral Collection, Ettingshausen's son-in-law Grailich, continued the research of luminescence. The Viennese academy awarded his book about crystallographic and optical research on 30 May 1857. He devoted a special chapter to the exploration of luminescence, especially in solid state. He used Herschel-Brewster’s method, with Stokes’ supplements, in an equilateral cylinder of diameter and height of 2 cm. Like Stokes, he noticed that the fluorescence of some crystals may be polarized after its exciting with unpolarized light. During the observation through William Nicol's (1770-1851 Edinburgh) prism, he also described "Doppelfluorescenz", a phenomenon related but distinct from dichroism, which makes the colors of the luminophore different depending on the direction of incidence of light relative to the crystallographic axis. Lommel (1879) and E. Wiedemann (1880) also studied that phenomenon.[3513]

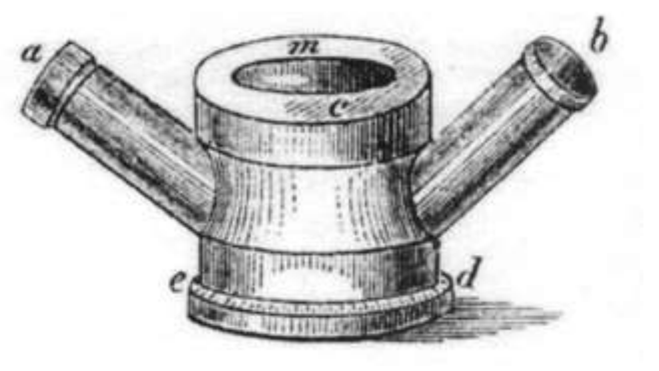

Figure 31-16: Grailich’s experimental tools.

After Grailich's death, Stefan became Ettingshausen's successor at their physical institute. Stefan’s research started in collaboration with physiologist Ernst Wilhelm Brücke, who investigated the opacity of the lens and cornea of our eye for ultraviolet light which causes luminescence in 1845 and 1846. The Viennese physician-physicist Pierre, who moved from Prague to replace Ferdinand Hessler at Viennese Polytechnic in 1867, headed the measurements of the limits and maximums of fluorescence spectra. E. Mach took over Pierre’s Prague chair and well-equipped lab with thousand tools. For nine years, Pierre was concerned with the question "Can dark rays, i.e., heat rays (infrared) whose wavelength is longer than the extreme red rays, also cause fluorescence?" Pierre's answer was affirmative as support of "negative fluorescence". Pierre continued Stokes’ measurements of chlorophyll and received preparations from Vienna and Frankfurt. He wrote that Stokes' law is useful for "simple", but not for "composite" fluorescence, which gained Lommel's approval. With the same excitation light, the florescence spectrum was always the same, but dependent on the pH of the

[3513] Joseph Grailich (1829 Bratislava - 1859 Vienna), privatdocent of Viennese physics Institute, Krystallographisch-optische Untersuchungen, Wien & Olmüz 1858, 60-61; Kayser, 1908, 873; Harvey, 1957, 402-403.

solution. Pierre used Stokes' idea of exploring the spectrum of luminescence to determine the chemical composition of matter.[3514] In 1862 he discussed the use of fluorescence phenomena for the detection of fluorescent substances in mixtures at the journal of the Royal Bohemian Society of Sciences and in 1866 he wrote about the heat radiation caused by fluorescence at the Viennese academic journal which was republished in Poggendorff's Annalen der Physik und Chemie. In 1884, soon after Stefan's heading of Viennese exhibition, Pierre established his own chair for electrical engineering at the Viennese College of Technology (today's University of Technology) and applied for the establishment of a laboratory based on the model of Germany's first electrotechnical chair of Stefan's deputy at the Viennese exhibition Erasmus Kittler at the Technical University in Darmstadt in Hesse.

After the March revolution of 1848 Pierre worked as substitute teacher (supplent) for physics and adjunct teaching mathematics and physics in Robida's Klagenfurt. Pierre was professor of physics at the Technical Academy in Lvov in 1851 and then full professor at the University of Lvov in 1853-1857 as predecessor of Radziszewski. In Klagenfurt, Karl Robida began his lecturing of mathematic and physics as the collaborator of his decade and a half younger but formally better educated Pierre during the Spring of Nations. In 1861, J. Stefan's grammar school professor Robida listed "fluorescence phenomena among the natural colors of the reflected light of the body." He agreed with Stokes that during the fluorescence "the oscillatory period" of the emitted rays is increased, which is equivalent to increasing the oscillation amplitude due to weakening forces between molecules of fluorescence material. He illustrated the "Fluorescence Reflection" of molecular and intermolecular dual layers on the surface of the prism with a sketch.[3515] Thus, Robida first wrote about Stokes' law in the Slovene national space to support his theory of the same volumes of (point) atoms with masses dependent on the properties of a substance, which is unacceptable today.

The Viennese high school professor Moravian Franz Josef Pisko also described his own observations of thirty luminophores illuminated by different vivid colors in 1861. He accepted Stokes' theory, although he also described Eisenlohr's ideas. In his closing chapter, he described the use of a fluorescence for the determination of the ultraviolet component in different spectra. They should not be permitted in a photographic darkroom, since fluorescence rays are also photochemically active. He noticed that the fluorescent invisible script made by the quinine or the aesculin solution could be photographed through uranium glass in the microscope to avoid strong blue-sky light.[3516] His uraninite (pitchblende) was was extracted from the Habsburg silver mines in Joachimsthal (Jáchymov) for a colouring agent in the local glassmaking industry. Ettingshausen's student Pisko was a great historian of thermodynamics and optics as well as editor of final third edition of F. Hessler's textbook of technical physics published in 1866 which made his popularizations widespread in Habsburgian monarchy. Pisko served as professor of physics at the Viennese technical military academy in 1870-1872 and finally as a high school director even if Habsburgian regular curricula never fully adopted luminescence again after the Jesuits Biwald, Schöttl and Herbert's Dissertatio de igne of 1773.

At the Yugoslav Academy of Sciences in Zagreb Tesla's teacher Sekulić announced that the frequency of light cannot change upon its transitions from the ether to the substance, which could only affect the amplitude of light. He did not trust Stokes' law because Sekulić refused ether in general. He observed "calcescence" in glass cathode ray tubes in which he inserted powders of various metals. Sekulić interpreted the phenomenon, like Lommel, by analogy with Helmholtz's combination of tones. In changing frequency of the absorbed light, Sekulić saw an example of more general mutual conversions of light, heat, electricity and magnetism. Sekulić concluded the discussion with an idea in Lommel's style: "The phenomenon of fluorescence and

calcescence can only be created by a combination of two waves of different nature, therefore, with two colors of a different nature."[3517]

In 1876/77, Reitlinger and his student turned assistant Alfred knight Urbanitzky (1852 Voitsberg 30 km west of Graz in Styria-1905 Vienna) investigated the green phosphorescence at the cathode-ray tube. They found that an inch broad phosphorescence carries a negative charge and affects the voltage and the current through the cathode-ray tube.[3518] In 1879 Urbanitzky and Reitlinger described the absorption of gas on cathode in fluorescent cathode ray tubes, and also how a green phosphorescence spot formed on the inner wall of the tube approached by conductor from the outside. In 1877 at the Viennese TH Urbanitzky presented a first remote transmission of music using Bell's telephone over a 210 km long telegraph line and received his PhD with a dissertation on the stratification of electric light at the University Tübingen. In 1883 he and J. Stefan co-founded Elektrotechnische Verein in Vienna (today Austrian Association for Electrical Engineering, Österr. Verband für Elektrotechnik). He became a great popularizer and historian of electromagnetic sciences.

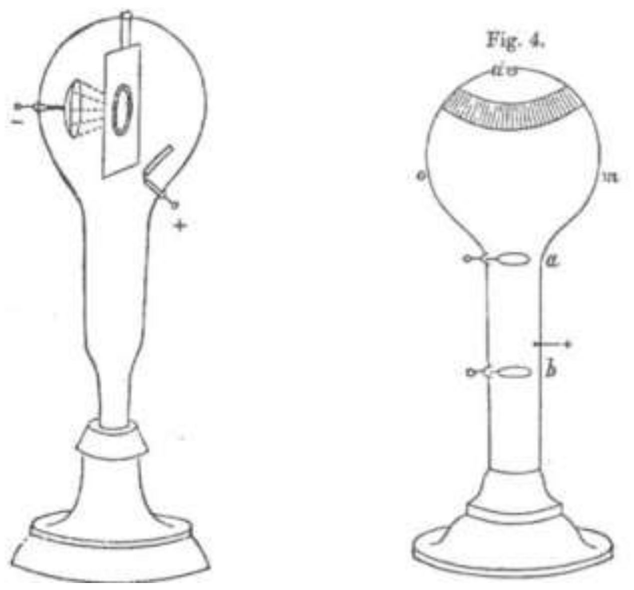

Figure 31-17: Puluj's experimental devices.

Urbanitzky's seven years older Ukrainian colleague Ivan (Johann) Puluj as the Orthodox theologian turned electrician studied the changing phosphorescence in the overpressure cathode ray tube. He noticed that carbonized paper showed bluish green phosphorescence when bombarded with cathode "rays". The color resembled the diamond's phosphorescence, therefore he repeatedly checked his charcoal under a microscope. Unfortunately, only for similarity.[3519] No diamonds around and Puluj did not became a magnate.

Puluj criticized Goldstein's assumption that phosphorescence does not produce cathode rays, but the accompanying "positive light". He also rejected Crookes' finding of 1879 that the glass wall is "tired of forced phosphorescence", as fluorescence is supposed to reduce sputtering (overlapping) of particles on the glass.[3520] Today, we consider (Crookes') aging of the supposedly tired luminophore as well as the (Puluj's) diffusion of ions if metals on it.

31.9 Luminescent Lighting (Electro (Photo) Luminescence)

Puluj made up a radiometer with plates covered with luminescent calcium sulfide. He covered the mica plate shaped as an ellipse with the same luminophore the cathode-ray tube. The aluminium cathode had the same diameter as the cathode ray tube, while he put much smaller anode above the luminophore: "The light of the phosphorescent lamp is bright enough to illuminate the room and allows reading at a considerable distance." Puluj demonstrated his lamp, which enabled reading at distance of 3 to 4 meters, at an international electric exhibition in Paris in 1881[3521] together with the designs of Urbanitzky, Ernst Mach and Jewish student of Prague Polytechnic Josef Kareis (1837 Semice (Semitz) in Bohemia-1913 Vienna). Kareis represented his native Bohemia as secretary of J. Stefan's Internationale Elektrische Ausstellung in Vienna in 1883, became first editor of Viennese Zeitschrift für

Elektrotechnik and later excelled as a prominent Viennese municipal politician.
On 13 February 1896, Puluj proved that the fluorescent substance in his lamp did not radiate X-rays like Becquerel's following Poincaré's Parisian suggestions few weeks earlier. Puluj was, of course, not the first European to come to terms with luminescence lighting, as Alexander von Humboldt (1769-1859) in the Caribbean already loved the lighting of his giant fireflies enclosed in glasses. As early as 1860, Gassiot described the use of cathode ray tubes for lighting in the Transactions of the Royal Society in London. In 1882, Rankin Kennedy (1853/54-1917 Isle of Bute) of Glasgow received an English patent for a cathode ray tube with electrodes covered with phosphorescent material, which glowed after bombardment with cathode "rays". Rankin Kennedy later worked under the director of his fellow Scotsman Lord Kelvin in the limited liability company Kelvin and James White Ltd. newly formed in 1900.

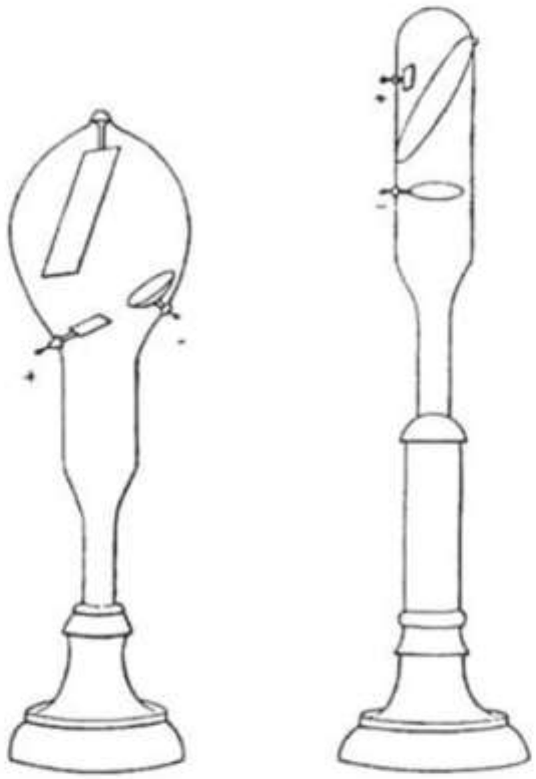

Figure 31-18: The design of Puluj's radiometer.

Despite of USA efforts and needs the decisive discoveries in luminescent lighting were mostly still achieved by the Germans and the French. Pohl used to deal with metal thin-layer mirrors before the First World War in Berlin. Between 1920 and 1923, and in 1929, together with his Göttingen student turned assistant Bernhard Gudden he detected changes in the motion of electrons by the excitation and emission of light from Théodore Sidot's blende invented in France in 1866. Pohl's discovery was contrary to the results of the Lenard's group from Heidelberg. Between 1909 and 1914 Lenard and his guys reported that the conductivity caused by lighting is not related to phosphorescence and that phosphorescence does not affect the conductivity of luminophore.[3522] Pohl supposedly disliked Lenard's Nazism while placing his Göttingen students of experimental physics at best German academic chairs resembling Sommerfeld's Munich students of theoretical physics or earlier J. Stefan's Viennese students, but Pohl's student Gudden died as dismissed arrested Prague university professor after lost WW2.

Pohl's research was continued by Frenchman Georges Destriau (1903 Bordeaux-1960 Paris). He examined the suspension of the same Pohl's polycrystalline luminophore in oil in *Centre national de la recherche scientifique* (CNRS) in 1936. It turned out that the most suitable mixture for implementing Destriau's effect is the mixture obtained by glowing 3/4 of available zinc oxide bleach with the other 1/4 of zinc blende with traces of blue vitriol at a temperature of 1200°C. The brightness increases at higher frequencies and voltages, and at higher temperatures.[3523]

Geissler's cathode ray tube was offered for lighting shortly after its invention. In 1862 in Great Britain the first patents came out by experts from Birmingham at Warwickshire Timothy Morris and Robert Weare, and by Edward Henry Cradock Monckton from Fineshade at Northamptonshire. In 1860 in the *Proceedings of the Royal Society of London*, Faraday's biographer the chemist John Hall Gladstone (1827-1902) described a bulb filled with helium. He used to be Graham and Liebig's student and married the niece of Lord Kelvin which enabled great impact of his suggestions. On 13 May 1859 Gladstone and his fellow commissioners appointed to inquire the Condition and Management of Lights, Buoys and Beacons, viewed the Way's lighters. They merely examined

the professor John Thomas Way's laboratory and house at No. 15, Welbeck street West End central London, but also his designs at Hinde street and the corner of Manchester Square, where his great superiority over gas light was evident. John Thomas Way (1820–1883) was a professor at the Royal Agricultural College at Cirencester and became a Consulting Chemist to the Royal Agricultural Society as and expert for river pollution and soil manuring. Though Humphry Davy demonstrated the possibility of producing light from a discharge in mercury vapour by maintaining an arc between a wire and a pool of mercury as early as 1821, on September 3, 1860 J.T. Way first demonstrated practical lamp by completed installation of modified carbon arc lamps on the Hungerford suspension bridge in London. His arc operated within a glass vessel containing air and a sizeable pool of mercury. The actual point of light generation in the carbon arc was the incandescence of the electrode tips, the arc itself being substantially non-radiative. In J.T. Way's lamp the heat from the discharge caused a small amount of mercury to evaporate, filling the glass chamber with its vapour, which was consequently ionised and imparted its blue-green colouration to the arc while also greatly increasing the total light output from this source. He was duly granted a British and USA patents for this novel extension of carbon arc lighting technology by the method employed for starting the arc in his lamp. With the ordinary carbon arc, the discharge was struck by bringing one of the electrode tips into contact with the other, and then withdrawing it slightly, the arc initiating as soon as contact was broken. This inconvenient method was surpassed in his mercury lamp, in which the upper electrode was fabricated with a small hole running along its length. To strike the arc, part of the mercury was poured through this hollow electrode, falling into contact with the lower electrode and automatically initiating the discharge once the flow finished and contact was broken. The electrodes in the lamp were stationary and as they burned away during use, complex electrical control gear would have been necessary to adjust the electrical supply as the arc gap lengthened. Way's light was produced in a stream of mercury flowing through slender tubes and connected above and below with the poles of a powerful battery. By clockwork, the connection can be broken and remade, and the light extinguished and relit instantaneously. The powerful light of a peculiar ash grey colour, which gave a ghastly appearance to every person and thing in the room. The health and safety issues associated with such a lamp would be horrendous today, since mercury was freely vaporised and released into the open atmosphere. No other known installations of Way's lamp are known, and in view of its dramatically enhanced performance this seems unusual. It is probable that even in the mid 19th century there were concerns over the possible poisonous side-effects of the lamp he developed as B. Hacquet published about it earlier. Later in 1899 the other Arthur Fitch Way, as collaborator of Franke Stuart Havens who received his PhD at Yale, filled a patent for Kent chemical laboratory at Yale University in New Haven completed by Albert E. Kent's gift in 1888. However, helium was never frequently used in incandescent light bulbs, because it is expensive and better good conductor of heat than most gases, which makes helium filled bulb less efficient.

In 1879, Crookes somewhat disappointed expectations when he proved that under certain pressure the luminosity of cathode ray tube could no longer be used. The cathode ray tube was first commercially employed for lighting on Queen Victoria's diamond anniversary in England in 1897.[3524] The use of cathode ray tubes for lighting was limited by their short life.

By his patent granted in 1901 the son of New York mayor Peter Cooper Hewitt (1861 New York-1921 Paris) produced around 100000 Hg lamps 1 m long with a diameter of 2.5 cm. The efficiency surpassed Edison's bulbs but the emitted light was of a bluish-green unpleasant color. In the 1930s at GE a fluorescent coating was added to the inside of the tube for more pleasing white light radiated after it absorbed the ultraviolet light from the mercury. This made the fluorescent lamp one of the most widely used lamps in the modern world.

In 1895 the first usable "neon" lamp was finally demonstrated by former Edison employee Daniel McFarlan Moore (1869 Pennsylvania-1936 New Jersey), who solved the problem of short life with a valve that admitted the air into the tube when the pressure in it fell excessively. Moore's neon lamp had a length of 7-9 feet with a diameter of 2-2.5 inches and could use other gases. At first, he worked for US GE, and then he set up his own company. After Moore left United Edison

[3524] Bowers, 1998, 115-119.

Manufacturing Company his lamp became the first commercially viable light-source based on gas discharges instead of incandescence. He used the USA standard voltage of 110 V for his 2.5 to 3 m long tubes.[3525] He arranged cathode ray tubes and neon lamps for illumination at the beginning of 20th century. But lighting was dangerous as the unemployed inventor became enraged after finding his invention which he filed for was already the subject of a patent granted to Moore. And the bullet was ready for poor old Moore there in wild wild west.

The French chemist Georges Claude (1870 Paris-1960 Paris) developed the industrial liquefaction of air and commercialized Moore's neon lighting as a supporter of Jacques-Arsène d'Arsonval's ideas of generating energy by pumping cold seawater up from the depths for ocean thermal energy conversion (OTEC) in Cuba in 1930 shortly before N. Tesla discussed OTEC in December 1931. In 1910, Georges Claude presented a neon tube in the Grand Palais in Paris and in the church of Rouen. The "Neon lamp" needed high voltage and expensive and complicated installation, but it worked well and gave a better light compared to the bulbs which used the tungsten filaments. In the 1930s, Claude dyed the interior of the luminescent bulbs with enriched fluorescent color. He developed a technique for liquefaction of air and separation of its constituents, among them noble gases needed for his bulbs. In 1902 he founded Societé l'Air Liquide. In 1925 he was joined by his younger brother André († 1955), the graduate of École de Physique et Chemie Industrielle. They founded Société Claude Lumière, which joined Paz & Silva in 1935.[3526] But Moore's neon lighting did not end well even for the royalist Claude because of his collaborations with Nazis' Vichy regime.

The couple Curie's industrialist-chemist partner Emile Armet de Lisle (1853–1928) launched first radium factory in the world Parisian Société anonyme (S.A.) Françaises dite Banque du Radium. In 1910 in Belgium his factory patented luminescent sulfides, which illuminated upon radiating by radium in the vacuum.[3527] One of his best assignees was the inventor Alfred Neveu. In 1904, Armet de Lisle began financing the French journal *Le Radium* resembling Edison's Science in the USA.

However, luminescence lamps began to be widely used only after Arthur Holly Compton's successful experiments with fluorescent lighting at General Electric Co., Ltd. in Great Britain in 1934. Several weeks later the pacifist George Elmer Inman's (1895 Kenosha, Wisconsin-1972) team at General Electric's Nela Park (Ohio) engineering designed laboratory prototype of fluorescent lamp. They applied for a patent in the US in 1936 which was granted only during the war in 1941.

The other triumph of lighting with cathode-ray lamps began after the use of fluorescence coats. In 1859 E. Becquerel first used them at a pressure of 1-2 mm Hg in the cathode-ray tube. In 1896, Edison himself filed a patent for a fluorescent lamp which he got approved in 1907. In it, "cathode rays" arose the fluorescence of calcium tungsten, which gave light like a sun. In 1902 Steinmetz made a fluorescent lamp, but he did not have much success with it. In 1906, German engineer Richard Küch of Heraeus' firm used the molten SiO_2 and developed a lamp that worked at higher pressures and temperatures than the ordinary glass bulbs.[3528] The GTE Sylvania began researching the fluorescent lamp in Massachusetts and Pennsylvania in 1921 and then started to sell them in the form of long tubes nicknamed "neon lamps". As a rival to GE, although under the GE license the GTE Sylvania continued to produce bulbs.

Prior to the middle of the twentieth century, it became clear that the fluorescent lamp had a lower consumption of energy at the same luminous intensity compared to the ordinary incandescent light bulb. It functions longer and, with the choice of the fluorescence coating around the cathode ray tube, offers a much wider range of possible colors than the bulb, which is eventually cheaper.[3529] By assuming a shape like a bulb, just as centuries ago the bulb assumed a shape like a gas lamp, the "energy-saving" lamp might be predicting the final discharge of the good old Edison's bulb sometimes soon. However, we can only use the predictions like those of liquid crystal displays scheduled to replace cathode ray tubes. The Edison's bulbs and Braun's cathode ray tubes were on maybe still are

among the longest serving technical-industrial tools.

The next success was only the GTE Sylvania's first light emitting diodes patented in the United States in 1948. The research of electroluminescence as a light source was limited after the conclusion that it cannot exceed the "lifetime" of five hundred hours. Since the 1960s, similar technology has been developed for use in flat displays of laptops.[3530]

31.10 Conclusion

We have read one of the first descriptions of " fluorescence" and "lighting or phosphorescence" in the Slovenian language of Tušek who taught in Croatia: "...the most famous are the so-called light stones, which, after shortly put in the sun, shine in the dark in various kinds of colors. Those stones are artificially made by the connection of the sulfur, phosphorus, arsenic with lime, barite or strontium."[3531] A century later, Slovenians developed their own laboratory for the research of cathodoluminescent substances for the screens of miniature cathode ray tubes labelled as MKEM in V. Nemanič's vacuum lab of IEVT.

The modern physics was based on luminescent observations. The modern entertainment and computer industry is in its many aspects the observation of luminophores, since "one picture is worth a thousand words",[3532] as equivalent to a Chinese proverb "Seeing once is better than hearing a hundred times (百闻不如一见, bǎi wén bù rú yī jiàn)". As most luminescent and vacuum techniques, even that one originated in Far East. But the Westerners were able borrowers anyway. The Easterners and Native Americans always knew luminescence and other eternal truths, while we the white Westerners just loved to borrow their knowhow to prove its obviousness by their experiments, now for one and next time for its opposite theoretical direction, and to turn all that into the aggressive profitable technological business.

V. Finale: Organizing Vacuum Researchers & Backfired Philosophical Issues

32 Expert Societies for Expert Firms – and Vice Versa

32.1 Early European Vacuum Technology Companies

32.1.1 Introduction

The luminescence and advanced vacuum techniques soon needed businesses and organized focused research groups. The Americans might have been the first in moneymaking, but their European counterparts soon followed while their military humiliated Russian and Chinese by Crimean and Opium wars. Immediately after the Spring of Nations of 1848, two large Central European vacuum companies from the Leybold and Heraeus's families emerged as mushrooms after rain. Of course, the story is well known, and we will mainly summarize and beautify it here. A few people know that only a few years before those, one of the greatest physicists and mathematicians in that period was still close to Slovenian-Italian border in Gorizia to design the theory of vacuum, ether and optics of thin metal layers, which soon came to the headquarters of Leybold and Heraeus. Here is our story about the future baron the erudite Cauchy and about the popping of vacuum firms around his excellent theoretical studies ...

32.1.2 Heraeus

On April 1st, 1851, but without the fool's day first April joke, Wilhelm Carl Heraeus (* 6. 3. 1827 Hanau; † 1904) took over his father's company "Zum weissen Einhorn" in the town of Hanau in the state of Hesse, east of Frankfurt am Main. Their pharmacy has supplied Hanau citizens with necessary and less urgent medicines since 4 April 1660, all the time owned by the Heraeus' family. The town of Hanau as the home of the Lutheran storytellers the brothers Jacob Grimm (1785–1863) and Wilhelm Grimm (1786–1859) developed another dreamy story, this time based on the local smithery traditions of immigrant Protestant Calvinistic tradesman of French Huguenot and Netherland Walloon origin.

Young Wilhelm worked hard and soon his pharmaceutical and chemical preparations and pure rubidium and cesium became famous throughout Europe. He worked closely with local jewelers in Hanau, especially when using relatively new metal called platinum after Hacquet and his peers introduced it to European literati. This metal melts barely at 1769°C. Nobody was able to maintain such high temperatures before Heraeus; so, platinum was hammered while glowing white, which was only the best masters in Paris and London were able to achieve. In 1856, a year before Cauchy's death, Heraeus completely reversed the power ratios, as he succeeded in stacking two kilograms of platinum in the fire of a vapor of oxygen and hydrogen. Thus, Heraeus soon set up jewelry stores, dental products and chemical factories worldwide. The silver smile of platinum artificial teeth became a fashion that massively mutually attracted members of opposite sexes. Soon, Heraeus was among the first to produce pure rubidium and cesium.

Naturally, it was not possible without politics and the rich Wilhelm Carl Heraeus followed the German tradition of Guericke in Magdeburg and Hevelius in Gdansk; he was chosen to be mayor's deputy in Hanau. Of course, this did not make him poorer.

The biggest invention of Heraeus was, of course, their family business. So, Wilhelm Carl Heraeus knew very well how to raise his sons dr. Wilhelm Heraeus (1860 Hanau-1948 Hanau) and Heinrich Heraeus (1861–1910) to enable them to successfully take over his business in 1889, on the centenary of Cauchy's birth. In 1896, a platinum smelting company with forty employees had to move to the outskirts of Hanau because of their rapid growth of production, since each year they produced about one ton of that precious metal. Heraeus has become the major suppliers of platinum for the first ceramic paints, the electrochemical industry and factories of plastics; before the First World War, Heraeus especially proved himself in catalysis for production of nitric acid.

Figure 32-1 Portrait of Wilhelm Carl Heraeus (* 6. 3. 1827 Hanau; † 1904 Hanau)

The student of chemistry in Göttingen and Berlin Dr. Wilhelm Heraeus and Heinrich Heraeus were able to attract their classmate from Hanau Grammar school dr. Richard Küch (1860 Salmünster 40 km northeast of Hanau-1915 Hanau). Richard Küch studied chemistry, mathematics and physics in Marburg and Leipzig. With his inventions and his direct contacts with the world of science, Richard Küch developed a relationship between production and research at the Heraeus' plant. So, he followed Edison's American example. Küch developed the first platinum blast furnace heaters, and in 1889, the process for production of high-purity quartz glass, which became the foundation of the subsidiary of Heraeus Quarzglas GmbH established in 1912. In the 1960s the director of Heraeus Dr. Heinrich Mohn continued Küch's work.

In 1904, Küch discovered a strong greenish light of mercury vapors in cathode-ray tubes. The most ingenious Germans from Heraeus, with the help of Allgemeine Elektrizitätsgesellschaft, immediately set up the Quarzlampengesellschaft mbH, which produced the original Hanau silicone sunbursts for artificial sunbathing. All the Germans of both sexes who gave something to themselves ceased to crawl along the hills or on Slavic Adriatic seas and by the pleasant light of Küch's inventions appropriated the desired color of their skin faster and less effortlessly. Until Hitler's takeover, there was practically no competitors in this field; Heraeus has remained strong even in the modern market of UV and IR lamps.

Despite his cooking surname Küch has proved himself with many scientific achievements. Richard Küch used platinum and rhodium for thermocouples and thermometers, and thus based the modern prestigious Heraeus measuring technique.

In 1913, Rohn was a head or research labs of the Heraeus' firm, called Physikalischen Versuchslabors der W. C. Heraeus GmbH in Hanau. Under Nazis' patronage, Rohn was also the member of the Heraeus board of directors and the president of German society for the science of metals (Deutsche Gesellschaft für Metallkunde, DGM) in the Association of German engineers (Verein Deutscher Ingenieur, VDI). In the decade before World War I, Wilhelm Julius Paul Rohn began commercial sales of vacuum smelting in large melting furnaces for Heraeus. In 1913 Heraeus produced the first vacuum alloys. In 1917, Rohn melted nickel alloys with Joule heat and patented the process after a year of testing. In 1921, Heraeus used a low-frequency vacuum furnace with a mass of 300 kg. Three years later, in the impending economic crisis, Rohn described the production of pure chromium by reduction of oxide in hydrogen. In 1928, he used a 4-tonne 350 kW power source for casting 2-ton ingots. He mainly produced thermocouples and alloys for resistant heating.

In 1929, Rohn composed a device for melting large pieces of metal at a pressure of 10 to 50 mm Hg. With additions of iron oxide or chrome ore he reduced the percentage of carbon in molten ferrochrome from 1% to 3% to 0.04%. In the decade before Hitler's takeover of power, Heraeus received a total of eighty-four German and 101 foreign patents by Rohn's and other technological innovations. However, under the Nazis, Heraeus largely sold his vacuum smelters to Siemens, and the rest was sold out in 1948 upon the death of Wilhelm Heraeus (1860 Hanau-1948 Hanau). That vacuum branch of production, unfortunately, was very different from the company's overall orientation.

During the economic crisis after the First World War, the third generation of the Heraeus family took over. In 1925, Dr. Wilhelm Heinrich Heraeus (1900 Hanau-1985 Hanau) made frontlines, and five years later, his cousin Dr. Reinhard Heraeus (1903-1985) also excelled. Between 1927 and 1965 dr. Wilhelm Heinrich Heraeus was the director of the company, while Dr. Reinhard Heraeus performed the same duties from 1931 to 1970 and took care of technology verification and the use of new physical discoveries for his company. Wilhelm Heinrich Heraeus was clever enough to join the Nazi party already on 1st May 1933. Wilhelm and his wife Else († 1987) founded Wilhelm and Else Heraeus Foundation to promote physics in the country. Under Reinhard's leadership, the company began to develop highly vacuum dispensing technologies in 1930; the first dental compound was produced under the very willing Hitler in 1934. Of course, the price of platinum fluctuated greatly, as the main supplier was a politically unstable Soviet Union under the Stalinist regime. At the beginning of the Second World War, there were already thousand people working for Heraeus; of course, the allies destroyed the production capacity of Heraeus as one of the main backbones of the Nazi regime in 1944 and 1945. The German industrial thinkers did not have any doubts about the choice of their subscribers at all only if they were decent enough to pay.

In the 1950s, Heraeus helped with the production of arcs and cathode-ray tubes with American aid, which typically followed US bombs. This cruel American tactic worked in Italy at the same time, but today we are following it mainly in Iraq; of course, the townsfolk of Dresden or Baghdad do not admire it too much.

Since 1911, Heraeus and Leybod have developed industrial vacuum engineering for themselves. In 1966, they were founded by Heraeus Hochvakuum GmbH and in the following year they finally merged with Leybold to Leybold-Heraeus GmbH and soon concentrated in vacuum coatings. In 1994, the joint venture was renamed ALD Vacuum Technik GmbH.

Multi-layer coverings were researched in the US and in Europe in 1938. The first technically satisfactory solution was published by a 40-year-old Max Auwärter with a two-layered system in 1949. By the end of the World War Auwärter was famous enough to resign the otherwise promising work at Heraeus on February 22, 1946. By the invitation of the Duke of Liechtenstein Franz Josef II he began to produce rhodium mirrors in the Balzers region based on his patent and research published in 1939. Only God knows what Auwärter, as the former fugitive from Heraeus, was thinking of a vicious circle, after which Balzers joined Heraeus ALD Vacuum Technik GmbH in 1995, as he passed away in that same year. The good old Central Europe did not merge only in Brussels, but at the same time by our a vacuum technique.

In 1983, Dr. Jürgen Heraeus (* 1936) took over the company as the fourth generation of a famous family and turned the company on Asian markets. We are still waiting for the fifth generation as Jürgen produced "only" daughters...

32.1.3 Leybold

On the same time, a similar company grew up On the same time, a similar company grew up besides Heraeus. In 1834 and again in 1846 a young village worker, the Lutheran Ernst Leybold, arrived in the city of Cologne and became a reseller in a well-groomed shop of Martin Kothe († 1851). A cute little man knew how to blur the ladybugs every time when her old lord was not home. After his death, of course, he was happy to cheer up the nice widow Marie born Völker as she might have been exactly six years his older. Already in 1850, the trader with imported wines and pharmaceuticals Ernst Friedric Leybold (* 7 November 1824 Rothenburg on Tauber; † 10 February 1907 Cologne) founded his own independent company and included in it the production of physical, chemical and pharmaceutical devices in Cologne. Already since 1851, he has made experiments with platinum, like Heraeus. This newly discovered metal offered many promises; even the Ljubljana researcher

Hacquet wrote about it. Leybold ascended to the summit on 30 May 1852, when he met at Cologne his nice hostess Marie Völker (* 1. 11. 1830 Köln; † 14. 10. 1890 Köln). They married soon enough in 1854. The new acquisition of family life has a beneficial reflection of Leybold's fresh corporate direction in the spirit of the boom that followed the spring of the nations in Central Europe in 1848. So far, Leybold has manufactured medical glass and thermometers, but has now decided to expand the activity. Like his rival Heraeus, Leybold has also moved from pharmacy to scientific devices and the use of platinum. In 1866, Leybold bought the Marienburg estate and built a porcelain factory there. A decade after Cauchy's death he set up a glass and mechanical workshop in 1867. This was the beginning of his production of physical devices for science teaching and for laboratories. Cauchy's work in Gorizia brought the best mathematician and physicist from Paris to German-Slavic land, while also the similar flourishing vacuum science came to fruition.

In 1870, Leybold sold its successful and well-established company to Emil Schmidt and Otto Ladendorff, who renamed it into Leybold's Nachfolger. Leybold himself, even before meeting with Abraham, could afford well deserved rest, to which he successfully devoted almost the entire second half of his life. Despite his sale, his company was partly succeeded by his grandson with the same name Ernst Frideric Leybold. By 1931, the company was headed by Emil's son Alfred Schmidt, followed by Alfred's son-in-law dr. Manfred Dunkel until 1967.

Figure 32-2: Portrait of Ernst Frideric of Leybold (* 7 November 1824 Rothenburg on Tauber; † 10 February 1907 Cologne).

The firm Leybold was famous in Cologne for producing radiometers which they sold even to Slovene secondary schools. In 1890, Leybold's Nachfolger introduced a vacuum technique to produce quartz glass. Soon afterwards, the collaboration with Gaede enthroned Leybold's Nachfolger on the Parnassus of vacuum technique tools production.

Soon after the election of Hitler, Leybold developed the first sputtering apparatus for industry. Two decades later, the Slovenians began to use their novelties. In 1957, on the centenary of Cauchy's death, at the first thematic conference by Leybold's premises, an association of manufacturers of vacuum coatings was established, which has thousands members today.

32.2 Vacuum Researchers in "Big Science" of the Second Half of 20th Century

The big firms like Leybold, Balzers, Heraeus, the French Compagnie générale d'électricité (CGE) founded on 1. 4. 1898, and their American competitors soon stimulated the organizations of vacuum researchers. The first monographs of the scientists from pioneering generations published description of early vacuum technology already in the years 1906 to 1926. Nonetheless, only the later vacuum researchers after so many successes began to consider their work as an independent branch of science and one of the foundations of physics. In Slovenian sometimes backward milieu, the vacuum researchers are still mostly classified as the researchers of the new materials, which is not fully adequate. Perhaps a decades long delay in the development of this feeling was due to the commitment to the various branches of learning that form vacuum technology as a concealing common denominator of vacuum research. Thus, in 1939, the descendent of Alsace family which decided to remain in France even after Prussian victory in 1870/71 Ferdinand Holweck (1890 Paris-1941 Paris) was a successful advocate for the establishment of national vacuum societies as former personal assistant to Marie Curie and Paul Langevin. He patented thermionic tubes in 1914 and a decade later he designed a vacuum pump known under his name which utilised the drag of air molecules against a rotating surface to achieve vacuums with pressures as good as one millionth of a centimetre of mercury. After his collaboration with pilot-writer Antoine count de Saint-Exupéry (1900-1944), the Gestapo freaks killed Holweck. Due to the war, Holweck's initiative had to wait for a Saturday afternoon in November 1944, when the French vacuumists met in the famous Parisian inn near Saint Germain. They were struggling behind their good drops of fine wine, whether to establish a union or rather a scientific society. At the end of the evening, the last opinion prevailed, and on March 19, 1945, nineteen members formed a society named Société Française des Ingénieurs et Techniciens du Vide (SFITV, later renamed as Société Française du Vide, SFV) with the first issue of their Journal Le Vide published in December 1945. Later it was renamed to Vide: Science, Technique et Applications, while it is published as La Gazette du Vide since 2003. In January 1951 it was soon joined by Amsterdam Elsevier Science journal Vacuum which published a study about the pioneering Carniolan vacuum researcher Guericke's patron Auersperg in 2016,[3533] two decades after the Eindhoven headquarters of Karl Marx's cousin Phillips moved to 125 km northern Amsterdam in 1997. On April 13, 1962 the Dutch Vacuum Association (NEVAC) was founded to promote the exchange of knowledge in the field of vacuum technology and areas in which vacuum plays a major role as the part of the International Union for Vacuum Science, Technique, and Applications (IUVSTA). The NEVAC assembles nearly 300 scientists, technicians and representatives from some 60 companies.

Eight years after the French, their United States liberators founded a similar organization. On 18 June 1953, at the initiative of Frederick A. McNally, fifty-three researchers met in New York and identified the need for an institution to discuss the problems and uses of high vacuum technology. Six days later, the first meeting of the Committee on Vacuum Techniques was organized and formally established in Massachusetts on 19 October 1953. The first national symposium with 295 participants and thirty-five presented papers happened in Asbury Park, New Jersey between 16 and 18 June 1954. The name did not appear to be sufficiently punctured, and ~~in~~ three years later the members voted to change their name to the American Vacuum Society, Inc. (AVS). Between 1964 and 1980, AVS attracted 2000 to 3000 members, and the membership doubled in the early 1990s. In September 1964, AVS established an expert journal, Journal of Vacuum Science and Technology, which soon became the main reading of researchers of the vacuums.

On 5. 5. 1958, the Japanese established a vacuum society during their very close contacts with similar organizations in France, the US, West Germany, Sweden, Italy and Belgium. Already in 1948, a member of the French Vacuum Society Robert Champeix planned the International Vacuum Conference for 1949 or 1950, but the proposal fell into the water due to the lack of money. The initiative was taken over by the Belgian section for vacuum technology founded in 1954, which seriously advocated an international vacuum congress in 1956. IOVST was founded at the 1st International Congress on Vacuum Technology (Premier Congrès International pour l'Etude des Techniques du Vide) led by Émile Thomas (2 April 1907 Brussels-14 January 2001) in Namur in Belgium 50 southeast of Brussels on June 13, 1958. This was the first major international meeting of 522 vacuumists from twenty-six countries associated with the simultaneous world exhibition in Brussels. Émile Thomas became the president of International Organisation for Vacuum Science, Techniques and Applications (IOVST, later renamed IUVSTA) to serve at that post until 1962. France Lah (30th May 1923 Prvenci 5 km east of Ptuj-25th September 1998 Ljubljana) and his two then young collaborators of IEVT participated in the congress in Namur. When the Slovenians heard about it, within a few months they established their own Slovenian vacuum technique section of Electrotechnical society (EDS) a predecessor of the Society for Vacuum Technique of Slovenia (DVTS). Initially it used to be a vacuum technique section at the Electrotechnical Society of Slovenia as most of members participated in both.

On December 8, 1962 in Brussels IOVST was renamed IUVSTA (International union of vacuum science, technique and application) when it became an international association of state vacuum organizations with ten founding members based in

[3533] Južnič, 2016 November. Four centuries of Slovenian Vacuum Techniques from Auersperg-Guericke's experiment (1657) to Tesla's Maribor (1878/1879) (on 400th anniversary of birth of the Prince Johann Weikhard Auersperg (1615-1677)), *Vacuum* 136 (2017) 60-63.

Brussels. The founder of American Vacuum Society (AVS) in 1953 Medard W. Welch (D. 1980) became its new president serving until 1965. In the mid-1960s, many countries already had professional vacuum societies or national committees dedicated to vacuum. On the autumn day on 20-22 October 1960, the Slovenian vacuum technique section of Electrotechnical society (EDS) under Dušan Lasič's supervision organized the first Yugoslavian meeting about vacuum technique with over hundred participants who read forty-eight expert reports to establish Yugoslavian center for vacuum technique (JCVT) with its seat in Ljubljana, transformed into Yugoslavian committee for vacuum technique (JUVAK) on January 26, 1963. On 29th October 1979 it was renamed into the Union of vacuum societies of Yugoslavia under the presidency of Jože Gasperič still with its old popular name JUVAK. That was a great beginning of future successes. On 16th October 1972 the Slovenian vacuum technique section of Electrotechnical society (EDS) became an independent society inside EDS. On 22. 1. 1977 it got a present name Society for Vacuum Technique of Slovenia (DVTS) which was formally registered next year on 29th September 1978.

On 29th September 1981 Society for Vacuum Technique of Slovenia (DVTS) began to publish its journal "Vakuumist" which gradually became an expert journal under the editorship of Andrej Pregelj, Peter Panjan, Miha Čekada and Janez Kovač. As the editorial board member Jože Gasperič stated in his 1999 Vakuumist paper and on 2016 meeting of the editing board, the journal is that basic glue which keeps the society afloat.

Organizations of vacuumists are professional societies; they help to overcome restructuring problems when new areas of vacuum technology are opened. Of course, the organization cannot influence the limitations imposed by nature itself, but it must support the promising solutions.

33 Vacuum Questions Philosophers & Theologians

33.1 Vacuum Philosophy

After the Spring of Nations, the newly invented vacuum cathode ray tube first proved the electrons, atoms and their nuclei much closer to the thinking of physicists and chemists, and only afterwards opened the door to biological entities like viruses, which had yet to be brought to a convenient crystalline form. Even though the most obnoxious virus of the day was the evil causative agent of the Spanish flu, which, despite of its killing of the Spanish king, did not transmit so much in neutral Spain as among the warring parties of WW1. The experts were mainly studying the TMV virus, which was most at hand and it peacefully refused to attack animals or humans.

The virus had successfully evaded the Dutch microscopes of the days of Galileo and Leeuwenhoek because of their poor resolution despite of the professional instrument maker Baruch Spinoza's polished lenses. The problem was finally resolved by the newly designed fertile cathode ray tubes: first by a much more distinct X-rays beam imaging of the son of Dutch mother Roentgen, and then, after World War I, by even more powerful electron microscope. In that way, the modern problems with viruses influenced the philosophical ideas of smallest entities with vacuum included.

33.2 Slovenian Philosophical Minded Physics about Vacuum[3534]

33.2.1 *Sašo Dolenc as Physicist-Philosopher*

The vacuum firms and societies smoothed the technological advance, which gradually returned the research of vacuum to its basic puzzles: what is missing in vacuum, could we achieve something like total vacuum? Even for Slovenes the vacuum is no longer just a technical tool, but also the subject of profound reflection. Dolenc's book saw the light of the world as result of the research, which was financially supported by the ARRS. It is one of the first high-profile Slovenian interdisciplinary research, which itself promises new times. On the one hand, it united the efforts of the Slovene thinkers of the empty with the Russian and the Western research. Above all, it allowed physicists to socialize with philosophers, such as Sašo Dolenc or Miha Nemevšek from SISSA (Trieste) and IJS department F1.

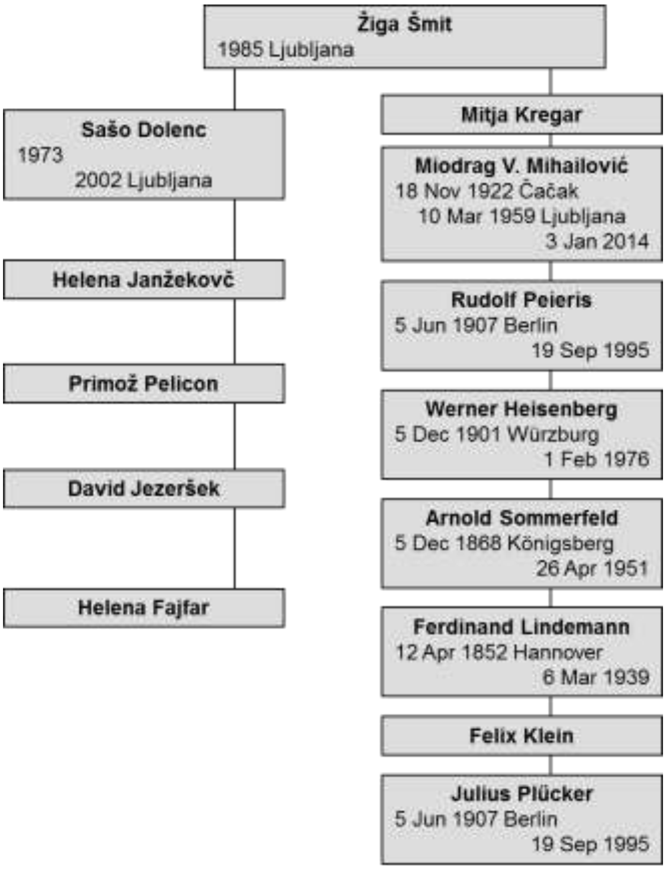

Figure 33-1: Academic ancestors of Sašo Dolenc by his physics graduation thesis awarded by grant of Prešeren

Miha Nemevšek described a vacuum in quantum field theory as a state with the least possible particle-free energy, with a spin that is not zero. He was interested in the possibility of measuring a strong neutrino signal in the Large Hadron Collider to determine how heavy and light neutrinos are combined in Higgs vacuum.[3535] In doing so, he proceeded from the basis of Paul A. M. Dirac, but he upgraded it with the assumptions of Ettore

[3534] Sašo Dolenc (ed.), The Structure of the Void.

[3535] Nemevšek, 2013, 94; Nemevšek, 2013, 1.

Majorana (1906-1936) developed just before Majorana's mysterious disappearance in 1937; his neutrino mass matrices were integrated into the minimal left-right symmetry model. Using the Dirac-Yukawa range of neutrons for the Dirac-Yukawa colliders, such as the Large Hadron Collider, shows ~~how~~ a prolonged influences provided by a century old pioneers of quantum mechanics, whose assumptions are worthy of attention even in today's completely changed circumstances.

Similarly as Nemevšek, Sašo Dolenc also mentioned the works of the great joker Richard Feynman, who, in his own way, began to teach everyone. The New Age is supposed to solve the philosophical ignorance of the early quantum mechanics by denying the "Shut up and calculate".[3536] Niels Bohr (and, besides him, Werner Heisenberg with their many supporters) believed that people will never be able to understand the internal composition of the atom because of their mental and linguistic limitations.[3537] That funny postulate can be seen in a different light in the changed new economic and networking situation. Sašo Dolenc compared the problems of newly discovered irrational numbers faced by Pythagorean reality with the problems of modern perception of reality and vacuum focused with the advent of quantum physics, in which the main problem is no longer ~~a~~ Bohr's human defects, but rather ~~in~~ Heisenberg's uncertainty principle of 1927 which pushed the universe of vacuum and invisible particles into the realm of statistics as an echo of the uncertain world we lived in the times of recession that occurred in 1923 and 1927 just few months before the fatal Great depression. In fact, the main problem became the very area of statistics,[3538] also because insecurity of Heisenberg's 1927 times might not be the same feeling which we witness today in globalized world full of oily trade wars and coronaviruses as kinds of organic nanoparticles. In Einstein's sense, God is not a gambler and statistical-quantum mechanics is primarily due to ignorance and not to the objectivity of Heisenberg's principle of indeterminacy (uncertainty).[3539] The statistical mechanics won only temporarily by the transformation of the person himself into the subject of statistics and will fall when a person returns from the object to the subject. Sašo Dolenc received the Prešeren's award for his undergraduate thesis Dual ionization of internal atomic shells by electron collisions in Ljubljana and continued with his philosophical PhD studies about the importance of mathematization of continuum and the scaled measurements of time for the constitution of modern science to became the great editor of leading local popular magazine, albeit just for s short time as the reactionaries accused him of making a new Scientific American our of Proteus. Instead, Sašo Dolenc became the leading local populariser of sciences.

33.2.2 Structure of the Empty and Detela's Polyphase Cradles

The uncertain world of emptiness versus the technical reality of vacuum tools in our everyday use is just one aspect of puzzles which we face as the heirs of Bohr's Copenhagen mainstream interpretation of quantum mechanics. The other puzzles focus entropy as the time arrow itself sanctioned with Carnot's principles two centuries ago. Andrej Detela presented his syntropy effect to us the young physicists a long time ago[3540] in a hand-bound A4-format booklet, which was gently handed over to us by our older colleague Detela. He said what we all felt: the truth is more than precious, only the courage needs to discover it. Even today, I have this book bound in a yellow card in a prominent place in my library.

Detela's di-entropic effect has matured in the meantime and has become syntropy! Andrej Detela built his new book based on many years of cooperation with the leading colleagues of the Vakuumist magazine. Prof. dr. Maja Remškar showed him the images of atoms on the screen of an electron microscope and introduced Andrej to the secrets of nanotubes. Prof. dr. Slavko Amon has often taken time and acquainted Detela with semiconductor structures, so that Detela could calculate the necessary parameters of the experimental nanostructure and other parts of his experimental confirmation proposals,[3541] for the time being only by predicted manufacturers of

[3541] Detela, 2014, 22.

syntropy. Based on Amon's advice, a model for a syntropy source of energy with a glowing core which transforms the heat energy of surroundings into electricity. Detela called it glowing incandescent (vajkta, vyakti). It should be made from a thin semiconductor plate with nanoelectrodes bound in a three-phase resonator has been developed. With the future development of nanotechnology, according to theoretical calculations, a compact device of a volume one liter and a kilogram mass could supply as much as 1 kW of electrical power.[3542] At today's level of development, the achievable power is much smaller, yet measurable - certainly a challenge for a courageous vacuumist, who would focus on the experimental check of Detela's plans.

Detela’s new models of the new generation of electric vehicles have gained a lot of recognition among the Japanese, although they are not available on the market yet. The Japanese experience could be decisive on the balance that would convince the Slovenian vacuumists to implement Detela's theory. Not without a reason.

One of the most imaginative Detela's proposals for experimental evidence of a violation of the second law of thermodynamics is based on the production of a thin layer of InSb with a thickness that should not deviate from the desired thickness for more than half the grid constant parameter.[3543] That is no doubt a serious technological limitation, which, however, accessible the modern vacuum researchers at the IJS and in other laboratories could achieve if the verification of Detela's theories will be promising and the interest will be yielding. Especially because Detela mitigated his problem in the version in which the external magnetic field eliminates the requirement for that extreme accuracy of the manufactured thickness. His novelties were published in English language in 2020.

Of course, this is also a big challenge for modern, fast-moving thin films’ techniques. For the verification of the theory, the expensive AFM (atomic force microscopy) technology would not necessarily be needed, which alone would be able to produce individual electrodes in high-power futuristic power plants. This is the extreme example: the width of the electrodes is less than 5 nm in the three-phase version and is a for 50% thinner in the two-phase version. The conductive layer should not be deeper than 1 nm below the surface, which may have been achieved with graphene. Such a layer of few atoms would be covered with a thin layer of dielectrics and covered with nanotubes.[3544] For the initial verification of the theory, Detela’s book also presents a model with electrodes, which are "only" about 100 nm thick. To make such a system today is perfectly possible, while of course, it is still a great bite for a modern vacuum researcher.

In his research, Detela also tackled the history of developments of a never finally proven entropy law. In doing so, he obstructed notably the funny Maxwell's imagination of the demon as an intelligent nanostructure that redirects individual molecules.[3545] Of course, the idea of the imaginative Scotsman Maxwell's seemed to be a more fortunate joke to his contemporaries than a serious physical experiment, while in the modern nanotechnological operations with individual molecules, this is not necessary the case anymore.

The research of Andrej Detela's syntropy as the natural ability of many complex systems to spontaneously self-organize themselves to an ever-increasing degree of internal ordering in contravention of the entropy law is certainly a kind of heresy for people who are educated in the spirit of the second law of thermodynamics. Thermal fluctuations are not the same as quantum indeterminacy, but some parallels are suggested: In Einstein's sense, God is not a dice gambler and statistical-quantum mechanics is mainly due to ignorance (lack of sufficiently accurate vacuum gauges) and not just the objectivity of Heisenberg's principle of indeterminacy. The statistical mechanics may have won only temporarily because of the transformation of the person himself into the object of statistics and will fall when a person again becomes a subject; we are already witnessing something like that in web communities. With modern nanotechnology, individual atoms/molecules slowly become distinct from one another in a multitude of themselves, just like a modern-day person who no longer wants to be just a figure in statistics.

[3545] Detela, 2014, 386.

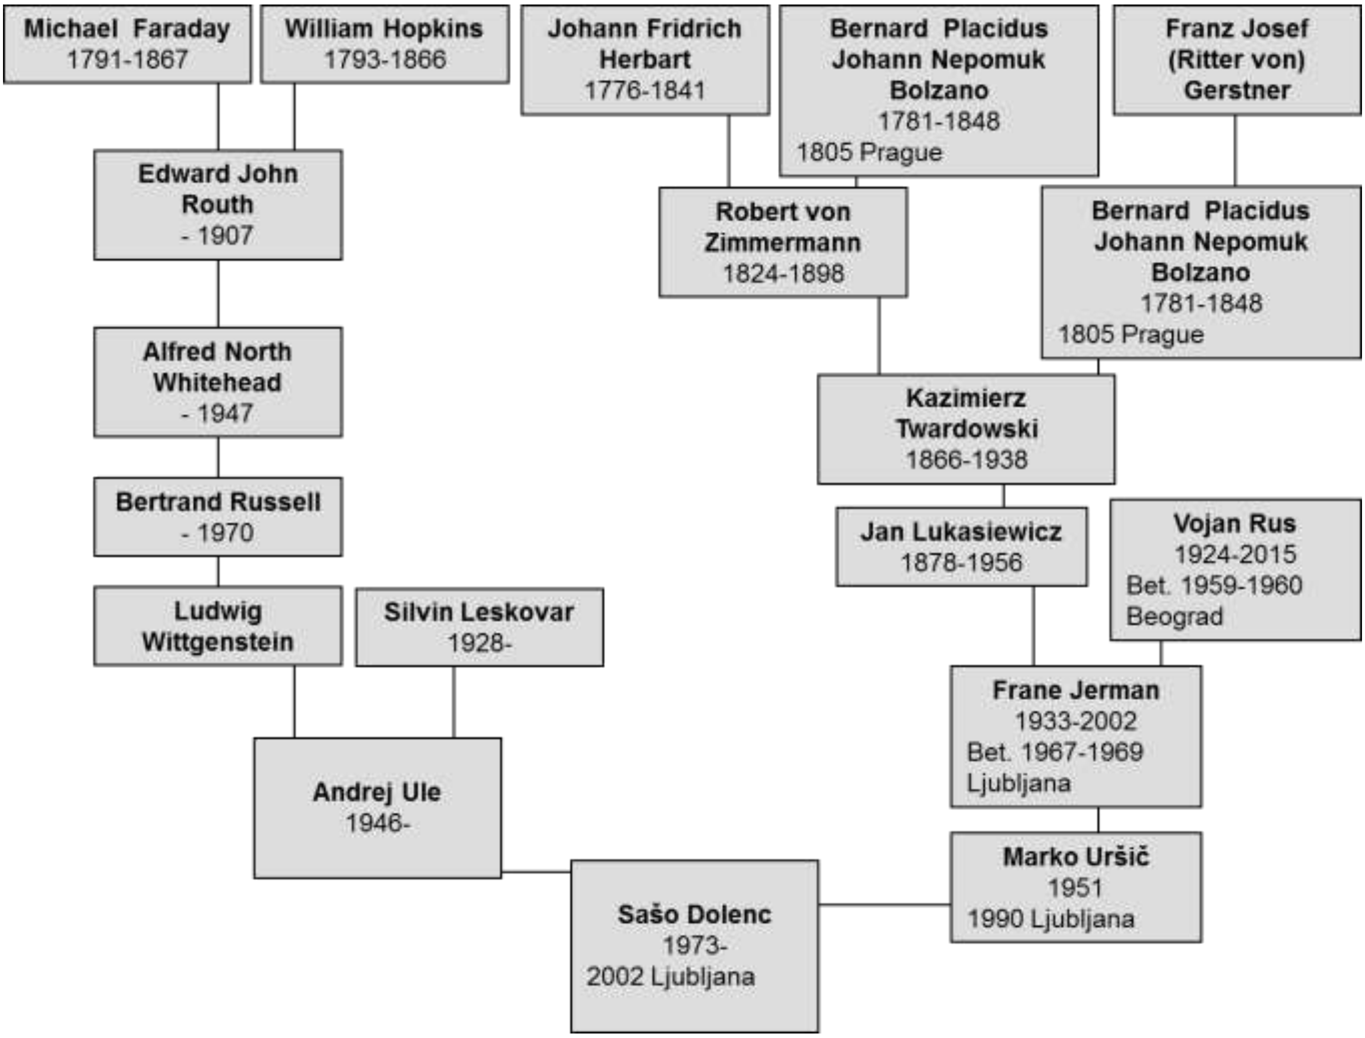

Figure 33-2: Academic ancestors of Sašo Dolenc by his philosophical dissertation

The theoretical background of Detela's novelties can be debated, but the puzzle stands and falls with an experiment. Who among the Slovenian vacuumists will he brave enough to carry it out? Of course, there is a certain risk and deviation from the financially supported ongoing programs, with a small chance that the syntropy will be directly included among them. But courage, both in life and in vacuum technology, always yielded interest. It just needs a little bravery. As Detela loves to narrate his teacher I. Kuščer's expressions of some doubtful aspects of entropy law in his last published paper "Should we believe the entropy law?" Certainly, Émile Amagat's (* 1841) and Jacob Tripler Wainwright's (* 1854) early criticism was misplaced. In their simple cases, the entropy law is nonetheless valid. Namely, entropy is an additive quantity, and if we make up the individual parts of the system, and if these individual parts each separately obey the entropy law, then it also applies to the whole. One should look for a medium that behaves differently at the microscopic level - e.g. some new physical phenomenon in some strange field, etc. That's no longer a matter of statistical mechanics and conventional thermal processes.

33.3 Development of Vacuum Technology Under the Toynbee-Kuhn-Južnič Scheme

33.3.1 *Introduction*

Dolenc's and Detela's thoughts about vacuum could be compared with similar approaches of former physicists even if Émile Amagat's and Jacob Tripler Wainwright's (* 1854) early attempts were too simplified. Exploring the empty is as old as the world itself; it's about thinking about the infinitely small and infinitely large, which are at the same time the foundation of an infinitesimal calculus originating in the thoughts of India.

Naturally, the deliberations about the existence of a vacuum in nature were not initially supported by specially convincing experiments.

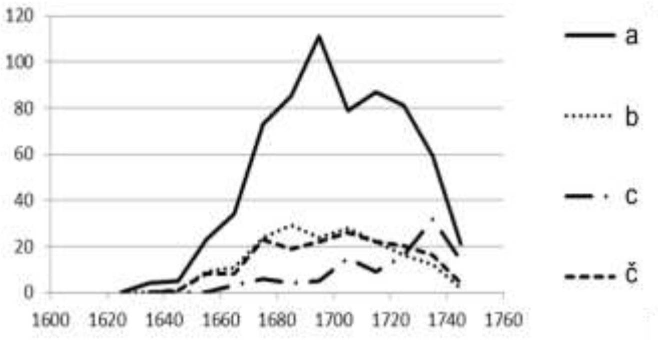

Figure 33-3: The number of Jesuits born in the middle of a decade long interval drawn on a horizontal axis: (a) serving in Ljubljana between 1704 and 1773, (b) taught philosophy in physics in other colleges in a total of 178, (c) they taught or specialized-repeated mathematics in other colleges of a total of 104, (c) the number of writers with preserved works among Ljubljana's Jesuits out of a total of 169

The uniform Ancient European physics was divided into the basic, nowadays classical branches for a relatively long period between 1600 and 1785, between Galileo and the French Revolution. The physiologist turned physicist Hermann von Helmholtz' four branches of physics were adapted to five human senses, which he knew as a physiologist to the last detail: the mechanics for touching with acoustics for hearing, eyesight related to optics, heat of touching again, while the electromagnetism was perhaps much less obviously connected to smell-odour and taste of Galvanic tongue. Before the 20th century, Helmholtz's classical physics was be divided into four branches: mechanics (noted as M), optics (S), electricity-magnetism (EM), as well as research of heat phenomena (T). Helmholtz's distribution resembles the four antique sorts of elements: earth, water, air, and fire. The first three belongs to mechanics and the last one to heat and optics, while the ether could be imagined more electromagnetically. Similarly, six antique arts contained architecture, dance, sculpture, music, painting, and literature. None of them was connected to electromagnetism before the seventh art was invented to endorse photography and/or film. In 1773, with the suppression of the Jesuit society, they also suppressed the formal scholastic teaching of Aristotle's eight books about physics followed by the books On the Heavens, On Generation and Corruption, Meteorology and On Soul.

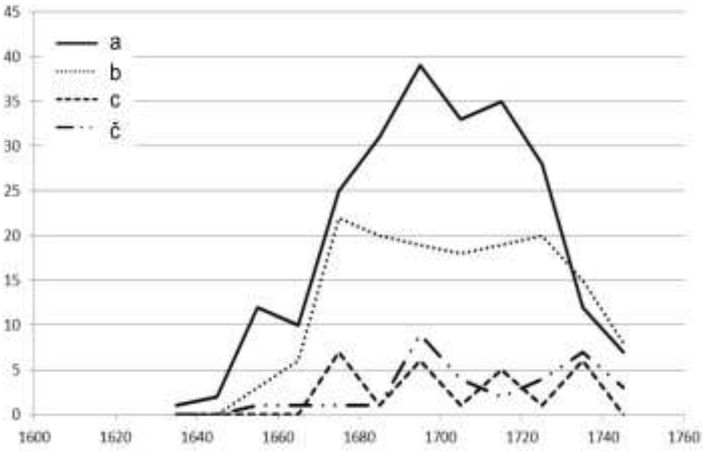

Figure 33-4: The number of former students of the first year of philosophical studies born in a decade long year period, drawn on the horizontal axis: (a) students of philosophy with physics at Graz University of a total of 224 Ljubljana's Jesuits, (b) students of philosophy with physics at the Viennese University among those who served in Ljubljana during the years 1704 and 1773 of a total of 150, (c) students of philosophy with physics at the University of Trnava of those who worked in Ljubljana between 1704 and 1773 out of a total of 27, (č) the professors of philosophy with physics who taught in Ljubljana between 1704 and 1773 out of total of 35

The billionaire turned philosopher Ludwig Wittgenstein's (Vienna-1951 Cambridge) influences his Cambridge fan Stephen Toulmin's (1922 London-2009 Los Angeles) opinion that the finality, in addition to resting as a natural state of Aristotle's science instead of modern dynamics, were Aristotle's medieval advantages and at the same time his Renaissance weaknesses. They became the obstacles to Galileo's change and progress.[3546] As a scientist, Aristotle retained his prestige primarily in biology, where Charles Darwin respected him; in 1842, Johannes Peter Müller proved the long-overbearing Aristotle's observation of the catsharks.[3547] Similarly, Kircher's scientific credibility was retained primarily in acoustics. The scholastic and, basically, Kircher's unconventional criticism of the theoretical consequences of the development of vacuum technologies has marked the education of the people of Ljubljana, mainly under the influence

[3546] Kovačevič, 2014, 19; Južnič, 1983, 228, 237.
[3547] Grant, 2007, 34.

of the Jesuitical University in Graz; the influence of Viennese scholars was considerably lower than Graz's influences as shown in the graphs below.

The Jesuits loved and still love Aristotelian scholastics. Andronicus of Rhodes was supposed to arrange Aristotle's books barely after Christ's death, as Hegel and others reported; although some recommended starting a reading of Aristotle's wisdom with his physics, the influential Andronicus ordered the introductions with logic. Aristotle's physics and metaphysics were banned at the Parisian University in 1210 and 1215; the ban did not affect the apparently uncontrollable Aristotle's logic. Thus, Aristotle's doctrine indeed dominated European thought until Galileo's days for three or at most five centuries; then his ubiquity slowed down also due to Aristotle's rejection of the vacuum, in which the Aristotelian peripatetic bodies were supposed to fall with an impossible infinite speed. The middle eastern Aristotelians had more time as they had no barbarian intermezzo because of Byzantine continuity, but their military performance might not have been European match in 19th century.

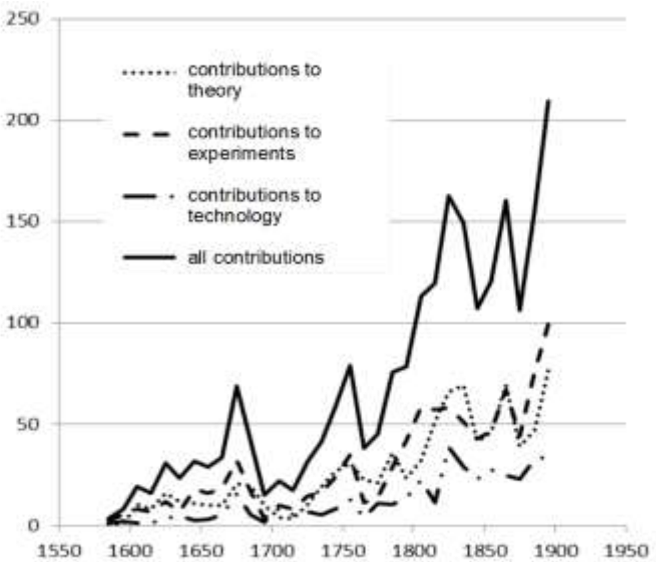

Figure 33-5: The contributions of all physicists according to Asimov (1978), rated from 1 to 9. Vacuum techniques have mainly contributed to experiments, the most perceptible in the middle of the 17th and in the middle of the 18th century, with inventions of the barometer and vacuum pumps or with invention of the Geissler's electrical glow discharges in diluted gases leading to the arc-lamps, X-ray tubes, Braun's cathode ray tubes, Fleming's vacuum tubes etc

Aristotle's prestige was undermined by vacuum technologies as an interdisciplinary research field, born with the barometer of Evangelista Torricelli in Florence almost four centuries ago. According to the division relevant to classical physics, it can be said that barometers and vacuum pumps were initially used in all branches of physics, including the research of mechanics and optics. In the middle of the 19th century, with the Plücker and Geissler inventions of the cathode ray tube for the modern experimentations, the researchers of vacuum specialized in the use of vacuum technologies for the study of electromagnetic and thermal phenomena.[3548]

The vacuum technique obviously advanced all the times to reach ever lower pressures to be distinguished from many other scientific fields, where the direction of any progress cannot be easily determined. The vacuum technology research, like any other, periodically brushed with great inventions, such as a barometer, a vacuum pump, gauges, getters, or a cathode ray tube. Thomas Kuhn might have these events for the revolutions. The invention was followed by a steep increase in research contributions, which was eventually introduced during the expansion into the previously uncovered area of research, such as biology. That could be Kuhn's normal period of research.

Along with the challenges of the new areas, seemingly unsustainable problems were created, which stopped the growth or drove it to the wrong abortive directions. The curve of growth is broken, as we call in physics; its derivative changed the sign. The mainstream researchers of those days did not seem to be alarming, and their investigations continued in the universal paradigm which became relevant for many scientific research fields. However, the disordered clutter disorder of the breakdown had silently aroused and triggered newly developed ideas that competed with the previous basic course of development called mainstream. When different programs were compared and tackled by the prevailing ones, there was a crisis and controversy among important currents that wanted much more money for their expensive research and all kinds of support. A new discovery enabled a breakthrough and triggered a revolution, followed by a new growth.

Thus, each paradigm of the research of vacuum technologies and similar physical investigations

[3548] Južnič. 2012, 34–39.

with a little effort could be conveniently divided into five states: growth (noted as r), breakdown (z), (disintegrating) universal paradigm (u), crisis (k) and revolution (p); the growth of the first paradigm of a given research branch is its genesis. During the development of the paradigm, the essential working aids are born, which we call universal research methods. The individual paradigms play their role and gradually cease to act as useful research ideas or instruments; that fateful destiny has, for example, seduced the vacuum mercury barometers, which we do not use today in laboratories anymore, and they merely belong to museums because of the poisonous effects of mercury. The universal research methods are in their own way eternal, since they are inherited from the paradigm by its successor; likewise, the universal churches with millions of believers are repeatedly resurrected, despite their seemingly indefinable, occasional crises including the sexual abusers in modern Catholicism or the growing modern scientific atheism. People just need their universal churches and universal scientific research methods as their stones guiding them from personal and professional crisis.

The eastern conceptions of void vacuum and infinitesimals slowly prevailed over European Aristotelianism by growing maritime trades. The ability to develop vacuum technologies was hidden in its extremely rapid initial growth in two experimental directions. The first two crucial experiments, which vacuumists have established on the European scale, have been staged very fast one after the other. First, the Florence Galilean spiritual heirs E. Torricelli and V. Viviani conceived and carried out an experiment with their first barometer. Ten years later Otto Guericke, with the help of Carniolan Prince Janez Vajkard Auersperg, carried out his first public experiments with a vacuum pump. The northern Italian experts, Blaise Pascal with his barometric altitude measurements in France and Guericke with a barometric prediction of the storm in Magdeburg, upgraded the discovery of the barometer. At the same time, Guericke's invention of a vacuum pump was introduced in parallel. The pump has had advantages and disadvantages compared to the barometer: it allowed the installation of the experiment and its actual change in the recipient, but initially did not reach the low pressure of the then barometers. Thus, both groups of researchers swore each to their own seemingly better experiments. Galileo's heirs, gathered around the Florentine Academia del Cimento, praised their barometers, the "pumpers" collected around Guericke's facilities in central Germany, Boyle's England, and Huygens' circles in Paris and the Netherlands, preferred vacuum pumps. Pumps have gradually turned out to be more convenient and have become commonly used, albeit initially an extremely expensive universal instrument. In England, they were produced for wholesale by Newton's protege Francis Hauksbee, and soon after the brothers Musschenbroek followed him in the Netherlands. With their production, the paradigm of vacuum pumps entered their universal phase when they were widely used in many scientific branches from biology to electricity also in Ljubljana in the middle of the 18th century; vacuum technicians tried to eliminate as much gas from the exhausted vessel as possible and to prevent leakage from the pumps with a solid piston. From the original 10 mbar they slowly approached the dream value of 1 mbar, but still without special business success or any profitable industrial use. The steam engine, of course, compensated lack of business offered to vacuum tools with its overpressure; however, the steam engines designers nevertheless developed exactly their same vacuum technique in completely new material conditions, full of industrial growth and moneymaking. The evolution of the vacuum technique stopped in the shadow of the steam engine marketing until 1857, when the imaginative Geissler replaced solid pistons with liquid pistons to reach nearly a millionth part of a millibar in the middle of the century during the growth of the new vacuum technology paradigm. In fact, Geissler successfully joined both tradition of European producers of vacuum by mercurial vacuum pump based on moving a column of liquid mercury instead of mechanical pistons, which lowered his absolute pressures of about 0.1 mm Hg based on a new type designed more than 130 years before Geissler's time by the Swedish scientist and theosophist Emanuel Swedenborg's (1688–1772) combination of Torricelli's mercury barometer of nearly a century earlier with von Guericke's pump. In a kind of dialectics frequently propelling the developments of sciences, the thesis of barometer with its antithesis of pump produced Swedenborg's and Geisler's synthesis still in charge today. Certainly, the synthesis needs promotion, therefore in November 1862, the Igelshieb native with some ancestors from the 100 km eastern Habsburgian

Bohemia Geissler joined Plücker on a journey to the Great London Exposition where they presented their experiments to Faraday, Gassiot, the secretary of Royal Institution of London chemist Henry Bence Jones (1813–1873 London), the president of Royal Society Babbage's antagonist Irish General Sir Edward Sabine (1788 Dublin–1883 London) as worldwide barometric measurer of heights, another Irishman John Tyndall and several others.

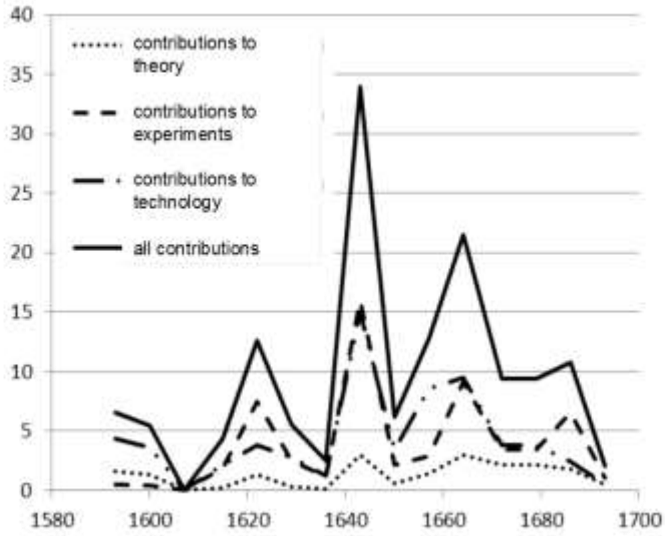

Figure 33-6: Research contributions in Galilean mechanics with vacuum contributions to experiments in the middle of the 17th century and with later technologies of steam engines.

Like once did early vacuum pumps, Geissler's electrical glow discharges in diluted gases leading to the cathode ray tubes have been used to greater extent as the universal instrument of all well-equipped would-be quantum mechanics laboratories. The mercury vacuum barometer was then removed from the laboratories as unscrupulous, according to recent research even a dangerous meter and matter after three and a half centuries of massive usages. The pioneering experiments with barometers and vacuum pumps upgraded by Geissler's electrical glow discharges in diluted gases for cathode-ray tubes may be the only or at least the most convincing examples in the history of physics of the rare case, in which the contributions of experimental researchers have far exceeded their colleagues of the theoretical fields of research. Something similar much more related to the profitable technology happened to steam engines before Carnot.

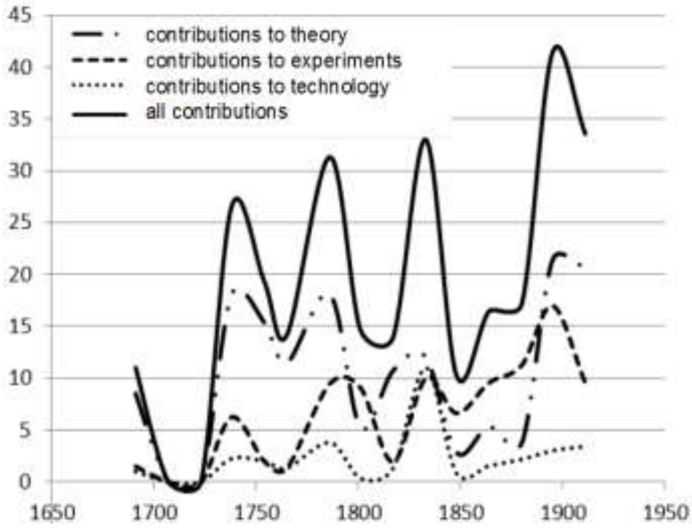

Figure 33-7: Research contributions in Newtonian mechanics

The competitions among the researchers is nicely illustrated with the graphs below. At the end of the 19th century, technological applications even overwhelmed the research contributions of experimental and theoretical scholars. The problems of the development of cathode ray tube vacuum techniques have again increased with the material successes of their industrial use in televisions; at first glance, the successful marketing appears to be welcome, but in real word they have become a goal for themselves and a unique obstacle to further innovation. The new paradigms have exhausted their capabilities during the First World War; 10^{-8} mbar was achieved by new diffusion pumps, and 10^{-14} mbar was made possible by more promising pumps with traps.

In the 21st century we again witness stagnation, and already dubious laboratory attempts to reach the vacuum with lower pressure than that of the interstellar space. The questionnaire returned to its starting point of four centuries ago: Is the (perfect) vacuum possible? What's left in it? What does it contain if there is nothing (material) in it? Is the proximity of absolutely empty a promise of a similarly surprising physical characteristic as the proximity of the absolute temperature zero of Fin de Siècle which the Kamerlingh-Onnes' superconductivity measurements provided? Probably also resembling the surprising effects of approaching the velocity of light including the twin paradoxes and relativistic length contractions?

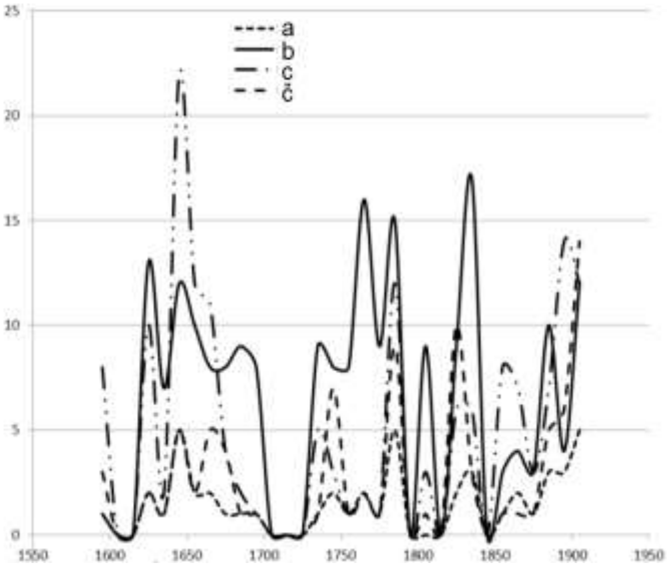

Figure 33-8: Researchers of mechanics designed by the middle date of their work plotted in the decade long intervals: (a) the number of researchers, (b) the contribution of theoreticians, (c) the contribution of experimental work primarily in vacuum technologies, (č) the contribution of technological applications

33.3.2 Cathode Ray Tubes as Historical Case Study

The mixings of experiences from different fields of research likely provides new insights even if it is hard to compare any experimental and theoretical methods with each other, especially in modern physics; the comparison between diametrically different research methods is often abortively poor. On the way to the universal experimental method, vacuum pumps and barometers were, at least in the barometrical networks of Florentine academics, associated with Galileo's research method (A'). They paved the way to Geissler’s glow discharge tube filled with dilute gas leading to cathode-ray tube; torsion scales (B2') and electrolysis (F) were similarly important in different fields of research. In fact, physicists have developed many other universal experimental methods that physical paradigms and industries borrowed from each other: in addition to the most important use of vacuum electronic devices including cathode ray tubes in all modern physics and technology (H'), there is also an example of thermal determination of the intensity of electrical current or luminance used in liquid crystal displays, and similar tools combining different traditions of research. John Tyndall in O2r also surpassed the original boundaries with his measurement of the body temperature according to the color of the emanated light. His results were used by Jožef Stefan by the discovery of his famous law at T2k in 1879.

Despite their great popularity, the vacuum barometer or vacuum pump did not develop into an Pan-European universal research method, although the pump was not far from that by its many designs of burning, ringing, breathing and many other experiments performed in the emptied recipient. A truly universal method, which we inherit even today, has become barely Geissler’s glow discharge tube filled with dilute gases emptied by a vacuum pump, and most of all its descendant, a cathode-ray tube; its emptiness was often maintained and even escalated with getters and other additional aids. In our scheme we will label the vacuum with the letter H or H' as the mark for the universal research method of vacuum pumps needed for Geissler’s glow discharge tube filled with dilute gases leading to cathode ray tubes. Vacuum experiments and pumps in M1k were the basis for testing steam engines in T1k and T2, and later for cathode ray tubes in electronics (EM3k, EM4r).

The experimental universal methods successively influenced various paradigms. Thus, experiments in the ever-better vacuum of Otto Guericke, following the incentives of the Carniolan Prince Janez Vajkard Auersperg, first made a decisive contribution to the criticism of Aristotle's (M1) and Descartes’ mechanics which rejected the vacuum; in fact, an experiment with horses resembling Guericke’s ideas was previously conceived by the Parisian professor of theology Jean Buridan (* about 1295; † after 1358), but he used it to discard the existence of an emptiness, which did not please everybody. Nicole Oresme imagined a vacuum as a space between two worlds; both should necessarily be round, so there is some room left between their spheres. The first rector of the University of Vienna (1365), Albert of Saxony, even described cases of supposedly slower falling in the empty space compared to the falling in filled spaces, which today seem to be false. Of course, none of the medieval vacuum-based assumptions could be verified by then available experiment.

Boyle designed his famous law while seeking evidence against the doubters of the existence of a vacuum.[3549] The ideas of the early modern sciences of Galileo, Boyle and Newton came to Slovenian countries in books, measuring devices, including proportional heights, in Halley's personal visits and in various Jesuitical events until Bošković, whose vacuum and other modern discoveries were finally sufficiently interwoven with Aristotle's logic. Knowing the properties of low pressures and vacuum helped many British inventors of steam engines in T1 and T2,[3550] as well as Jurij Vega and researchers of external ballistics in M2. Finally, vacuum of Geissler's glow discharge tube filled with dilute gases leading to the cathode ray tubes developed during the EM3 growth became part of almost all experimental devices of modern physics and industry, except for the later liquid crystal displays. Thus, Torricelli's description of the vacuum in the barometer more than any other invention in history successively influenced the theory, technological application and physical experiments.

Table 33-1: A comparison between the powers of the paradigms grown from the development of vacuum techniques. The letters refer to parts of the paradigms, highlighted in the text above, and the numbers indicate the sequence of the paradigm.

Year	**Appearance (technology)**	**Relative power of opposing paradigms**
1644–1654	Barometer, vacuum pump, air pressure	M1u < M1k (Torricelli, Valeriano Magni, Guericke, Pascal and Boyle against Aristotle, Kircher and Descartes)
1918–1931	Television	M3r < EM3p (Zworykin Technology)

The most powerful tools of physics during the Renaissance and quantum mechanics were Galilean thought experiment by neglecting the disturbing effects of friction and of imperfect vacuum (A') and the use of infinitesimal calculus in analytical mechanics (D). According to Chandra Kant Raju (* 1954 Gwalior, Madhya Pradesh in India)[3551] the infinitesimal calculus was transferred by the Jesuit missionaries under the Portuguese flag from the South Indian area of Kerala to Newton and Leibniz's networks in the second half of the 16th century. Both tools connected with endless, a vacuum and an infinitesimal calculus, are still powerful universal methods even today; they had inappropriately more power than other competitive methods of research. In the genesis of EM3 with Oersted's experiment in 1819, the idea of the law of energy conservation (C1''') dominated the mathematical tools of analytical mechanics (D) under the influence of *Naturphilosophie* of Fichte's student and Hegel's classmate Friedrich Wilhelm Joseph Schelling (* 1775; † 1854).[3552] In addition to thinking about the existence of a vacuum, this was probably the only direct influence of philosophers on the development of Western modern physics after the Hellenic era, while in India or Far East we could expect more of them. Between 1820 and 1834 Ampère proved the superiority of the universal method D, to which he added the revived Descartes' vortexes (B1). Cartesians used them against possibilities of total vacuum once upon time, but new Euler's and Ampère's generations of erudite were able to neutralize or at least ignore that Cartesian mistake. If it was mistake at all since the total vacuum never happened anyway.

Max Planck attributed to Boltzmann's definition of entropy a greater weight than to the universal method of Maxwellian force fields , which contrasted Einstein's conviction. Einstein set Maxwell's force field as the basic element of his physical description equivalent to matter in Newton's theory. Einstein was so convinced that he even confirmed the previously discarded Descartes's opposition to the vacuum with no Cartesian space that would "be emptied of the entire substance." Naturally, Descartes and his restorer Einstein linked the dimension-space with bodies without which it cannot exist (or at least cannot be perceived), which resembled V. Magni's victimized peripatetic idea. Einstein upgraded the centuries dilemma with the fields converted to masses by his equation $E = mc^2$. There the constant speed of light has become almost the property of the field.[3553] The power ratio from Maxwell's times turned around with Planck, which is not surprising. Planck gave to Boltzmann's universal method an advantage over Faraday-Maxwell's universal method, as Planck continued his research exactly where Boltzmann finished it, even if Boltzmann criticized Planck's editorship of the works of dead Kirchhoff. The claim is valid despite Planck's early inclination to Mach's doubt in the existence of atoms that angered Boltzmann. The son of the landowner who breed the Japanese silk moth (Antheraea jamamai) at the Lower Carniola (Dolenjska) Gorjanci, Ernst Mach, was a loud provocateur who asked the speakers during the symposium on the atoms: "Did you see them?" Mach diametrically opposed Rutherford's defense of the electrons against Eddington's criticism at the exclamation: Not exist, not exist - why I can see the little beggars there in front of me as plainly as I can see that spoon?!"[3554] They do not exist? Do not exist? I can clearly see them, just like this spoon in front of you! Such a ridiculous rhetoric of researchers who advanced on the shoulder of each other has more than simply a decisive importance as a source of legendary imaginations that were admired by the young generations of their followers under their umbrella, below the skies of doctored biographies of their glorified predecessors. Similarly, as Mach rejected the invisible cutting of visible particles, the Prussian-Polish Jew, the successful agricultural entrepreneur Leopold Kronecker (* 1823; † 1891) opposed the cutting of whole numbers, striving that all fractional, irrational or even the mystic transfinite numbers were merely a human creation; that Kronecker's opposition also hampered the

adoption of George Cantor's leading theory of infinity in Germany.[3555]

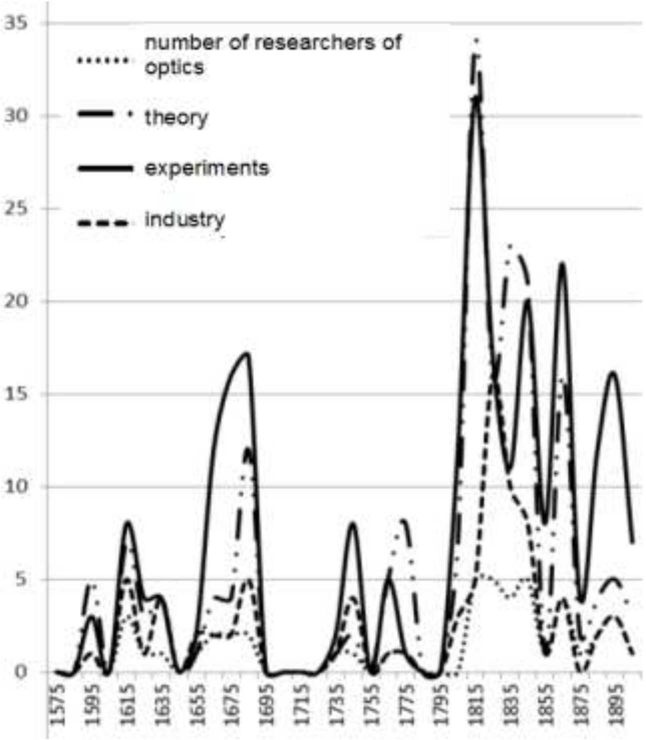

Figure 33-12: A more detailed list of explorers of optics

33.3.3 *Vacuum Experiments as a Motor for the Development of Physics and Chemistry in the Era of Crises*

The vacuum experiments (H) played an important role in (M1k), in steam engines (T1k, T2) and in cathode ray tube electronics (H') in T3. It is especially worth emphasizing Guericke's vacuum pump (1654) from Mk1 with experiments set up to answer the doubts of Prince Janez Vajkard Auersperg. It was connected to the contemporaneous Guericke's electrostatic frictional generator turning a sulphur globe by spinning wheel. The fields of infrared (thermal), ultraviolet and visible waves and new rays in vacuum (emptied) tubes were established after 1857. That was one of the pre-paradigmatic environments inherited from M1k, in which quantum mechanics (T3u) developed. New types of rays discovered by experimenting in Geissler's glow discharge tube filled with dilute gases leading to cathode ray tubes did not trigger the growth of the new universal paradigm in quantum electrodynamics EM4r or T3u, although they developed experimental methods using vacuum techniques. The universal method of theory remained the statistical theory, inherited from T3r. T1 was determined by vacuum experiments with M1k steam engines during exploration in T1k and T2.

Researchers on both sides of the boundary between the contradictory ideas often use thought experiments to describe the roots of the crisis they are witnessing. These methods are used either because true experiments would be too complex/too expensive, or if their preparation would be too long in time constraints due to the rapidly changing most influential areas of research during the crisis. A thought experiment is a self-exploring method at the boundary between theory and experiment. Its real factual impracticability is due to idealizations such as: neglect of air resistance and friction (Galileo in M1k, (anti)perpetuum mobile in T1k), the unreachable total vacuum (Galileo, Guericke 1654) or the unreachable absolute temperature zero postulated by Nernst. The design of experiments is obstructed by impediments like Einstein's (1905) impossible acceleration to the speed of light, the lack of materials of the required quality, the unrepeatability of homeopathic experiments with the memory of the water of Jacques Benveniste or Luca Montagnier,[3556] as well as the lack of sufficiently sensitive measuring instruments needed to perform real Maxwell's demon puzzle in T2k. Schrödinger's cat (1935) was a particularly famous thought experiment in quantum mechanics; many others emerged upon exchanged views between the rival Jews Einstein and Bohr at the Solvay Congress in 1926.

Even inside their outdated paradigm, Kircher's Aristotelian Jesuits, Leibniz's followers and Cartesians persisted as opponents of the (total) vacuum inside M1u, Biot and Poisson retained their opposition to Fresnel's transversal light in S1p, Kelvin, Clausius and Simon Šubic doubted Boltzmann's statistic by their obsolete T2p, Einstein fought his opponents in M2p. They and many others were stubborn and conservative because they were committed to the ideals of their youth. The opposition to the vacuum was enhanced by the fierce but abortive rise in research contributions of Kircher and his pupil Linus during half of a century following Torricellian barometer

[3555] Reid, 1977, 39, 133; Poliščuk, 1980, 28.

[3556] Hadži, 2014, 149.

of 1644; simultaneously the Cartesian denials of absolute vacuum developed their vortex models.

Except for the universal states of development of physical paradigm, the share of technological applications is usually a quarter of the entire research work in physics. It is the highest in explorations of heat, where the experts further tested the operation of steam engines developed by vacuum-like technologies, and later constricted the internal combustion engines. In the second place is electromagnetism, where in the 19th century (EM3) Faraday enabled the use of an electric motor and a dynamo machine. Thomas Alva Edison later patented the vacuum bulb, thus enabling the postponed use of Lambert's known measurements of physiological optics developed for industrial purposes already in a previous century. Although such important technological achievements did not follow the research in optics and mechanics, the share of technological research in optics and mechanics was only slightly smaller.

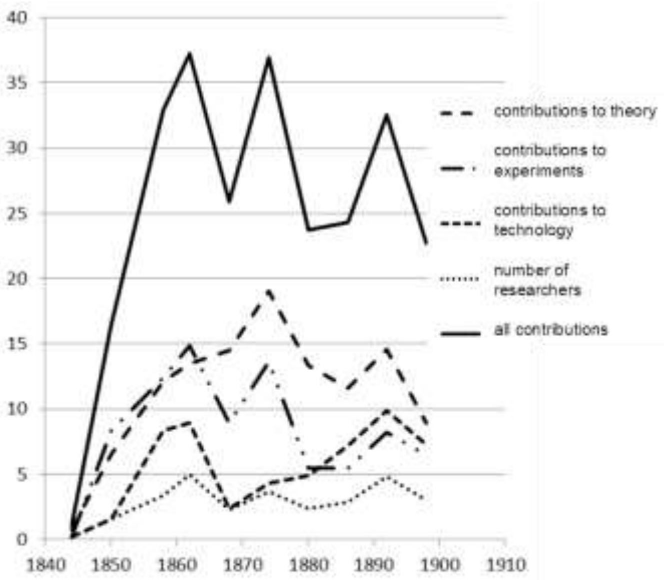

Figure 33-13: Research contributions to the law on the conservation of energy, heat as motion and kinetic theory according to Asimov (1978)

The contributions of individual types of research activities in various branches of physics are changing over time. Between 1841 and 1871, during the spring of nations followed by the wars for unification of Italy and Germany, the share of European experimental research was relatively small, despite the important contribution of Faraday; the share of technological applications was proportionally greater with the most successful among them such as: vacuum pumps for Geissler cathode ray tubes, dynamo, electric motor, telephone and bulb.

If we draw the number of researchers or their research contributions in mechanics as a function of time, we cannot see the marked maximums at points where they would be expected due to the development of a new paradigm. Four different peaks defined the development of mechanics: the first in the 17th century was neither Galilean nor Newtonian but was due to the relatively large research activity of pioneers of vacuum techniques during their era.

The curve of the development of theoretical research of heat had three maximums. In the first around the year 1680 prevailed the preparadigmatic study of gas laws and the operation of a steam engine developed by the somewhat reversed vacuum techniques. The second peak emerged around 1770 due to the research work of Scotsman Joseph Black, the Frenchmen Lavoisier and Laplace in T1, although Black remained the champion of the phlogiston.[3557] The study of the law on the conservation of energy in T2 caused up to date last maximum of investigations of heat in 1840 or in 1860.

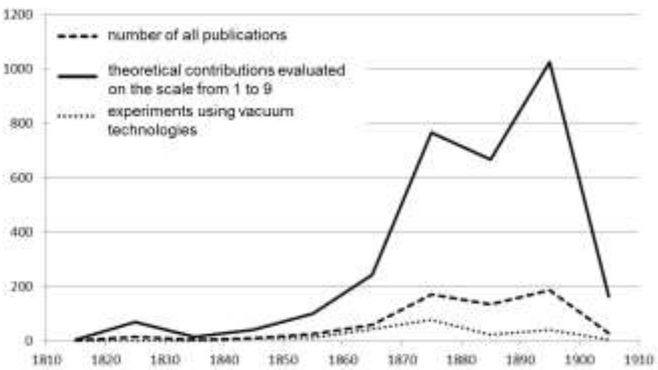

Figure 33-14: Number of publications about heat motion, kinetic theory and statistical mechanics according to S. Brush's census published in 1976

The use of physics in technology and industry has always been a specialty. For example, in his critics of Hobbes,[3558] Boyle liked to report on the usefulness of the food storage in vacuum, and the mayor of Magdeburg Guericke warned his voters

[3557] Kuhn, 1996, 70.
[3558] Kuhn, 2000, 316.

with a barometric forecast of the forthcoming storm. With a great deal of caution, we can, to some extent, distinguish the industrial usability from experimental and theoretical research in physics. In such a simplified model, physical research is limited to experiment and theory, that is, to experiential findings and their abstract mathematical formalism. In the first paradigms of physics, both components of the research were much closer to each other, but eventually the mathematical formalism gradually became more and more abstract.

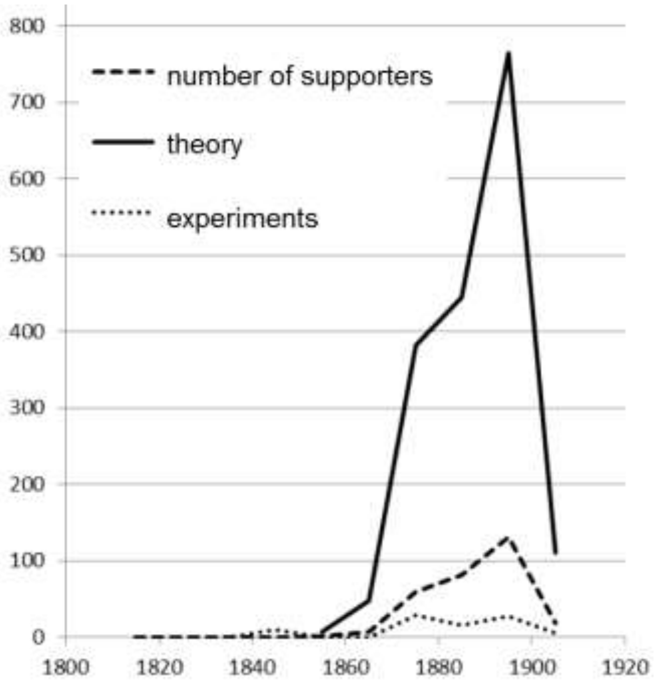

Figure 33-15: Proponents of statistical mechanics

The thought and real experiments in the spirit of Plato and Archimedes were opposed by the scholastic metaphysics of Aristotle's followers. Similarly, the Renaissance mechanics and astronomy of Johannes Kepler (* 1571; † 1630) each offered its own way of exploration. A lot of new discoveries as challenges often forced the old paradigm into a quick search for answers that surpassed its possibilities. The undefined answers therefore often opposed each other; the complexity of the old paradigm grew more rapidly than its accuracy. Soon it became clear that (Aristotle's) physics does not offer the right answers, at least not the ones demanded by developing westerner bourgeoise. Aristotelianism ceased to be a relevant explanation of physics of Galileo's experimental science. Galileo’s fans turned Aristotle's obsolete concepts upside down: Torricelli's vacuum experiment was explained by air pressure instead of Aristotle's force, which is supposed to drag the mercury up. The generalizations of Boyle, Pascal and Huygens followed the experiments in vacuum of Torricelli-Magni and Guericke-Auersperg.

At the same time, the vacuum became a kind of ether. The breakdown of the second paradigm of optics between 1830 and 1853 has triggered former friends Fizeau's and Foucault's attempt to measure the velocity of light in water compared to the speed of light in air between 1849 and 1853. Already Bošković planned to do it, but upon the spring of nations Arago’s suggestion won the day even if he did not like the little Napoleon III so much as Foucault. The association of refractive index with the density of matter became the "experimentum crucis" of Foucault and Fizeau’s decision against Newton’s corpuscula in favor of Huygens’ waves in the middle of the 19th century.

Main problem of Cauchy and others was that the models of the ether should combine the properties of an exceptionally rigid hard solid needed for the spread of transversal waves and the totally empty space for the smooth movement of celestial bodies. During the universalization, the effects of electromagnetism were favoured due to the same velocity of propagation of light and electromagnetic waves in a vacuum. Therefore, the same universal state of paradigm prevailed in S2 as in EM3.

Vacuum experiments with cathode ray tubes became a universal experimental research method, which was also used in the next paradigm called quantum mechanics (EM4). The discovery of electrons and other elements of matter in vacuum experiments produced the basis for new descriptions of the physical world. The electromagnetic field theory, born in EM3z, partly complied with the universal method of S3. In the domain of experimentations, the research involving vacuum prevailed.

33.3.4 Contemporary Orientations in Slovenian Vacuum Tehnique

The entry of bourgeois sons into European science (1554-1600-1698) was defined by successes of Copernicus, Gilbert, Galilei, Kepler, Kircher, Harvey, Descartes and François Vièta; next to

them were the vacuum researchers like Pascal and Guericke. The nobles of the highest class like Tycho Brahe, Valeriano count Magni, or Boyle were mostly the exceptions among them. Under their leadership astronomy, magnetism, mechanics, optics, physiology, geometry, mathematics and vacuum technology developed, while vacuum technology and electrostatic also influenced all known science of their times. Apart from the Jansenist gnostic Pascal who did not take sides, Brahe, and the Jesuit Kircher, all of them were Copernicans, including Gilbert's editor Edward Wright; among them only Descartes refused to believe in the existence of a (total) vacuum.[3559]

The sons of non-noble families took the initiative to develop vacuum techniques in central Europe two centuries after similar events enabled the successes of bourgeoisie in Newtonian England. For the development of Slovenian vacuum techniques, the spring of the nations in 1848 was essential; after those political changes the sons of the merchants were given equal opportunities for education, which were once reserved only for the heirs of blue blood. These changes enabled the work of one of the most important and today'soldest Slovenian vacuumists, the Upper Carniola (Gorenjska) merchant’s son Alojz Paulin.

The turning point in 1945 brought the new vacuum techniques into the able hands of even more unprivileged Slovenian peasants’ sons, who advanced well the modern vacuum techniques. The research of non-Europeans and feminization of the development of vacuum techniques followed to important new directions. The share of women in the development of vacuum techniques is also advancing steeply in Slovenia as the present writer described in his books: Physics, my profession (2007), Anton Peterlin (2008) and In the footsteps of Nikola Tesla (2014).

33.3.5 Conclusions

The development of vacuum technologies in the labs of non-white researchers will certainly define the future. The home environments of educated so far neglected people from Africa, Latin America, Aborigine Australia, the Pacific Islands and the Middle East will bring newly developed ideas that are different from the former merits of white Europeans of Christian ancestry. The concept of empty and nothing in the traditions of these peoples is in many ways diametrically different from the traditional practices of the white Christian folks. Depending on the speed by which the bourgeoisie developed vacuum technology in their times, and after them the farmers' kids and females, the contributions of non-whites can be expected very quickly, as soon as the current brain drain orientation of the transition of non-white erudite to Western universities will somewhat cease to enable the developments of third world global south countries' own educational institutions sufficiently.

33.4 Vacuum as a Limit

33.4.1 Introduction

The breakthrough of non-white vacuum researchers may change the European vision of vacuum as unachievable limits, since the European concept of the limit of infinitely small or large is by no means the only possible. When the "Non plus ultra" limitation was completely erased from

the European Herculean pillars in today's Gibraltar, the magnetic needle became indispensable, with its unusual deviations observed during the sailing of Columbus and Cabot, flourished as desired and therefore well-paid research projects. The type of philosopher ready for this kind of observation was necessarily inclined to an experimental direction, and vacuum technologies soon became the main stars on European flags. Like in earlier adventures of Newtonian borrowing of Indic infinitesimal calculus, the Westerners never quite understood the nothingness of vacuum, but they were nevertheless able to market it.

Modern physics began to evolve soon after the experts had successively discovered their key measuring devices: telescopes, microscopes, thermometers, barometers as manometers for vacuum pumps, portable clocks and sufficiently precise scales seemingly mostly in Europe of the first half of the 17th century because nobody researched the earlier developments of those devices in China and in other places outside the European domains. At various times, scientists differed considerably on the alleged limits of their surveys, but only with the development of their advanced experimental tools the ancient assumptions were rigorously examined. In physics, we have since been dealt with quantities that are in one direction limited, while in the other direction their limitations are doubtful. Such are the pressure-density or temperature, which have lower limits (vacuum and absolute temperature zero), while their upper limits (the highest possible density-pressure or temperature) sometimes seem plausible, but and occasionally not at all. The opinions change according to the current state of research in astrophysics and particle physics. Similarly, however, it is with the electrical charges; it can be completely zero, while its upper limit or charge density is most likely also limited in its own way. Something similar is attributed to the irradiance (flux density) of luminous radiations or the electromagnetic waves in general. Also, a time and a distance seemingly have a lower limit, which is zero, while their upper limits are debatable.

The Hinduists traditionally conserved much broader spectre of matter-energies compared to their later European imitators who limited themselves to the domains outside human brains in funny traditional European borrowing of only partly understood eastern wisdom which included infinitesimal calculus, vacuum resembling nothingness, and economic antifeminist celibate of Lateran Councils (1123/1139) and the Council of Trent (1545–1564) without proper yoga Hindu trainings westernized by Al-Biruni (* 973). Even some European literati were sceptical as they felt that no conservation law was useful as we do not know all energies involved. After the mid-19th century crew of Dutch and British ships finally applied the Hindu Vedic sub-category Upanishads to their physics the scope of the law of the conservation of energy was rapidly apparent to most physicists or even the less educated people, as was the restriction put forward with Nernst's law, which limited the absolute temperatures to zero, resembling Einstein's velocity of light, or the absolute vacuum as the limit of emptiness.[3560] Of course, Einstein limited the speed upwards, while the vacuum researchers and Nernst limited the density, pressure and temperature downwards. Contrary to the vacuum limits for densities, the speeds are indeed limited in both directions between the static and the speed of light in the vacuum. In this case, we do not only deal with the limit, but with the actual "static" speed with a velocity = 0 and the velocity of light, although the velocity of light in practical experiments with acceleration of bigger masses in a vacuum indeed turns out to be an unachievable limit.

Figure 33-23: Koller's illustration of fixed and movable wires in Ampère's experiment at the beginning of first Stefan's lecture about electrodynamics and induction at summer semester 1863, read on 21 April 1863 (Koller's notes taken from J. Stefan lectures, manuscript 32).

Of course, the second law of thermodynamics, with its entropic time arrow, remained the secret of all the secrets and the godparent of statistical interpretation of the world in quantum mechanics, which has mastered physics and related disciplines already over a century. Boltzmann combined mechanics and heat as two expressions of the same invisible physical phenomenon,[3561] but the entropy law soon proved to be beyond any proof developed inside the handy classical mechanics; so, he had to limit the possibility of combining observable macroscopic phenomena with those invisible from the submicroscopic world in a kind of predecessor of Bohr's correspondence principle developed in 1913-1920 to ensure the reduction of a new scientific theory to an earlier scientific theory in appropriate circumstances of its limited validity. Under that principle no today valid theory could be ever falsified like Aristotelian mechanics used to be, which is certainly an abortive attempt to guide present ideas form any kind of refutations as attempt to make modern western scientist immortal like Galileo or Newton despite of false Galilean theory of tides and false Newtonian ideas of eternal chromatic aberrations of lenses.

Certainly, the different branches of physics developed different traditions. While the inevitable tools for vacuum experiments like barometer, vacuum pump or thermometer were available in the middle of the 17th century, the useful electrical charge gauge was not designed for another hundred years.

The smallest and largest parts of the substance have similar problems. With the development of physics and chemistry, the honor of the smallest particle of matter was attributed to the atoms, and later to the nuclei down to the quarks, and even further or deeper. Limits are (still) not even on the horizon. For the most distant largest stars, the situation is comparable in its own way, as our greatest dimensions are constantly expanding with new discoveries, while repeatedly magnifying both the age and size of the universe. For both directions of measurement the microscope and the telescope appeared initially as very usable device, completed after the development of glass processing in the Netherlands and in Venetia which enabled the inventions of the telescope and the microscope around 1600. The invention is mostly attributed to craftsmen such as Cornelis Jacobszoon Drebbel (Drebel), Jakob Metius, Hans Lippershey or Zacharias Jansen in the Netherlands around 1600, but most of its profits were earned by the ingenious Galileo a bit later. The lucky "first come, first meal" is not always valid, but the guy must be also at the right time in the right place, as

3560 Feynman, 2000, 118.

3561 Heisenberg, 1998, 15, 69; Petković, 1998, 143.

Galileo used to be in the middle of the wealthy gullible Venetians. Galileo was clever enough not to tell his Venetian masters to loud that the invention was not entirely his own.

This opened the European view into the Indic feelings of infinitely small, infinitely large and infinitely distant. Those feelings soon became established in a differential calculus, where they found the first general and useful European form in 1660 with Newton and Leibniz's borrowing from Indian researchers by the mediation of Jesuit missionaries, as recently proved by Chandra Kant Raju's (* 1954) empirically decolonizing mathematics and physics into Ubiratan D'Ambrosio's (* 1932 São Paulo) ethnomathematics. The mechanics of ballistics and astronomy with the theory of orientation in the space gained the most from those novelties which the imperialist westerners borrowed outside Europe.

The communications between scientists through an accelerated exchange of ideas triggered a new way of thinking (almost) hostile to philosophy. In the middle of the 17th century, the Englishmen named this novelty with their insightful title Experimental Philosophy to promote their empiricism. Why did this happen right in the middle of the 17th century? Among others also because it soon turned out that science with vacuum pumps included can also be sold for the nice valuable prices. A century later the Victorian imperialism needed further distinguishing of westerner way of thinking, therefore the Kantian English historian of science white supremacist racist William Whewell (1794-1866) coined the term scientist in 1833/34. Certainly, the white scientists as the master of them all superior just because they had more guns and will to use them against their colonized coloured victims.

Soon it was clear, unfortunately, that the atoms were submicroscopic, and most of the stars were far behind the capacity of telescopes. Thus, even the special tools equipping the human eye by lenses could not determine their whereabouts. Fortunately enough, few more possibilities popped out with the observations outside of visible light which the nature intended for humans. We therefore use the electron microscopes and "telescopes" detecting the invisible rays. Already in the early 19th century it became clear that light has a much wider spectrum than it is perceived by human eyes. The ultraviolet and infrared light were traced primarily by their chemical and thermal effects. Prior to Röntgen's discoveries, their spectrum was not limited. The frequency of fluctuations included the thermal phenomena of infrared light, and the electromagnetic fluctuations have even lower frequencies. Thus, by the renewed ideas, a century and the half old phlogiston theory reappeared because the good old fans of phlogiston also claimed that the electricity, heat and light are the degrees of a same burning principle called phlogiston. In Maxwell's theory of electromagnetic waves in a vacuum, which, of course, was mathematically much more complete, the energy principle simply replaced once discarded phlogiston. When the newly advanced approaches of the Jew Heinrich Hertz and the Croatian-Serb Nikola Tesla pushed the Maxwellian waves into the world of industry and entertainment, the walls suddenly broke down into the global Earth of contemporary globalization.

Again, the space-distance or time seems to belong to somewhat different species. Both have limitations on their lower sides, but their upper limits are probably not attainable, just as in the cases of temperature or density-pressure. The distance zero between any objects would be contrary to the principle of the exclusion of the Viennese Jew Wolfgang Pauli. Otherwise, we want to describe the time interval zero in the conversational language as "at the moment I'll be there"; in real life, something like that is not possible due to Einstein's relativity theory. In the opposite upper direction, the time and distance-space are limited or not: it depends on the theory that currently prevails in astrophysics. Basically, the time also has a gigantic theological significance. Parallel with vacuum pumps, the clocks became more and more accurate,[3562] while nowadays time is by far the most accurately measured physical unit. The most accurate watches were used by astronomers all the time, because soldiers and traders gave them and the seafarers the greatest support. On the other hand, more accurate clocks allowed a more precise description of the sequence of natural phenomena. For the first time, initially shy and unconscious, researchers have introduced a time component into their study of natural phenomena after humanism introduced a sense of time and aesthetics as illustrated in the

[3562] Pipunov, 1982.

work of Francesco Petrarch (Petrarca) who collaborated with Barbara of Celje father-in-law Bohemian king turned emperor Charles IV (1316-1378) in the 14th century. The time has always been present in the Hindus' minds in the form of an inevitable time of kāle, which is identical with God himself.[3563] while the Westerners were willing to introduce time as their own basic concept only after the manufacturing processes of their oppressed workers demanded accuracy. The consciousness of the dynamics (time component) of events in nature finally penetrated only with Darwin's evolution and Boltzmann's entropy after the middle of the 19th century as the echo of their neighbouring industrialized working process. The arrow of time-entropy was born for scientists and against delays of disobedient lazy workers at westernized factories, while the Japanese started introducing their now legendary timing only with state decrees half of a century later. Inside the former European feudal system just the amount of tithe was demanded without any interferences in its production, while the modern capitalist doesn't want just the work done, but also wish to control then workers' time spent at a working place. The same system was introduced for (lower) education where not only the endorsed erudition matters, but also the time spent behind the school benches as a kind of acculturation.

The eastern arrow of time was introduced into western working processes and entropy concepts because of economic needs while its puzzles as singularities never really fitter the western minds. The vacuum soon became the important basic element of such singularity, which appears in the vast majority of allegedly point-like centers of forces. They were best developed in the imaginations of the Jesuit Bošković from Dubrovnik, who visited Ljubljana at least three times and spread his ideas among Slovenian ancestors. Soon after, his indirect student, the Slovenian Jurij Vega, began to solve the task of a body that would fly through the vacuum to the center of the Earth. Would it stop, flew through, return, or maybe it would rather oscillate around the center of the earth? In all cases, this was an example of an idealized movement in a vacuum, while the argument of possible or acceptable solutions was highly revered and loud.

33.4.2 Limits Outside Physics

In mathematics, of course, things are completely different, as the mathematicians do not tolerate so many borders that we the physicists have imposed. The other sciences are even much more subject to the borders, which in the modern ages gradually take over the leading roles and money from the hands of physicists. Thus, we have chemistry with eighty stable chemical elements comprising a total of 252 nuclides that have not been known to decay, and it is unlikely that we will ever find in the nature the additional stable ones. In the other hand, there is no real restriction put on radioactive nuclides that can be artificially created. The number eighty is surely interesting at the same time with its Western recognition, which for the first time unanimously adopted the periodic system of the Slavic genus; before Mendeleev, Lavoisier and many others tried to draw different tables of elements that even additionally contained some or other medium for the transfer of energy. It is similar in biology, where we have to do with many living beings, but their number is not infinite. The human being has twenty-three pairs of chromosomes, which is once-again a limitation, and with it, the investigators of genome get the most research money now and likely also in the future. Likewise, is with the life expectancy (longevity) which could be extremely short, while the maximal lifespan appears to be limited, although (yet) there is no biological law that declares the necessity of death. So, the clever Jewish New Yorker Richard Feynman even cried out that he may outsmart or even bribe the death itself, as the advancement of biology and medicine could soon discover all about the healing of a serious illness called death, which is the illness mostly just in westerners' eyes.[3564] Despite of such prominent ideas, even the genius of Feynman's sort finished his times in 1988. In modern American visions, the vacuum of zero-death is a great taboo theme, and instead of the direct unquestioned title death they preferred the term passed away or the deceased, with American Protestant cemeteries being more the meadows-parks, then the places of Confucius-like paying respects to ancestors. The day of the dead (of all saints) celebrated in central Europe would be a perfect alien for most Americans, especially right after Halloween's humor. The reflections about zero and vacuum

[3563] Kohler, 2011, 22.

[3564] Feynman, 2000, 100.

always had a strong Indian touch and are therefore a hard nut for Westerners' focused thoughts preferring to see just his or her own (full) pocket without emptiness.

It is similar with modern technologies, including those the most important: while for half of a century they have been fighting around the age when oil is expected to run out, according to recent studies, that oil is still rapidly generated in the interior of the Earth, which declares the oil-panic as the false alarms or fake news invented for the profits of the well-defined industries that are competing one against the other to lower the prices of Muslim, former Soviet and Venezuelan oil.[3565] Thus, the friend of the writer of these lines, the leader of the TRIGA reactor Matjaž Ravnik, in his book Greenhouse (Topla Greda) criticized the use of fossil fuels under the influence of then popular reflections on the Boundaries of Growth,[3566] which I in my physics student's reflections described in the Ljubljana student Tribune, rebaptized in the Meadows' Growth of mediocrity margins (Travniška Rast omejenosti).[3567] Of course, most professional ecologists reject not only fossil fuels, but also nuclear reactors, which is certainly not exactly the positions suitable for most physicists.

33.4.3 Europen Limits

Vacuum is today clearly a limit, to which we approach by excessive pumping or gettering. In the past centuries, many other opinions about this kind of activity have undoubtedly been considered. In the European tradition, the view of the vacuum, the empty, the zero, the limit, and the infinitesimal calculus remain mysterious. The Europeans borrowed most of these concepts from the Easterners, especially from the people of India, while the Westerners became only partly familiar with some marginal aspects of Indian philosophy. Thus, the number zero, limit and infinitesimal calculus were assumed only for the sake of easier European calculation, without understanding what exactly they do while calculating. In the case of the number zero, the Arabs were mediators and the process of borrowing was never questioned much. In the areas of the limits and the infinitesimal calculus two antagonist European groups fought for their supposed priority gathered around the Leibniz's Acta Eruditorum in Leipzig and around Newton's London Philosophical Transactions of RS. They hided the fact that their "inventions" were brought by Jesuit missionaries from India, where also the famous Matteo Ricci worked in his era.

In addition to the infinitesimal calculus, the Europeans were "infected" with a probability calculus, developed from the theory of games that were very popular in the high societies of the 17th century. The centralized countries with a general military commitment have encouraged demographic statistics and statistical methods in mathematics. At the same time, a mechanical view of physics was born; but both novelties did not mix until the second half of the 19th century, that is, for two full centuries after their genesis. The needs of mechanical physics demanded a new mathematical approach, which could have played the role resembling a microscope in mechanics or biology. The idea of the infinitely small and unlimitedly great has not only been established in biology and astronomy. The numerical series entrusted infinity to mathematics, and the need to determine the surface of irregular bodies (vortices, surfaces of revolution, solids of revolution) also brought it into mechanics in the form of an infinitesimal calculus. Such calculus was already offered by Huygens and by the English mathematicians to solve individual cases, but only Newton and Leibniz developed a general form of an Indian model that became a kind of microscope for the observations of events in mechanics and astronomy. Due to the accompanying prestige, the deepest dispute over the discovery of infinitesimal calculus has blown up, but the Jesuit missionaries from India, in fact, brought it to the networks of both main quarrelling protagonists, Newton and Leibniz. Despite of modern Indic science historians, the westerners continue to emphasize Newton's championship besides Leibniz's independence with much more useful Leibniz's symbols as the basis of modern terms of infinitesimal calculus. The ancient literati of India today justifiably appear to be a kind of modern synthesis in this once seemingly European dispute.

During the eras of Matteo Ricci and A. Hallerstein, it would be difficult to find the autonomous reverse influences of China on Europe or the independent Chinese orientations in mathematical physics that

The numbers in succession show the dates of births, the study of physics with mathematics or relevant academic promotions, the chairs of physics and mathematics held, and finally, the year of – death

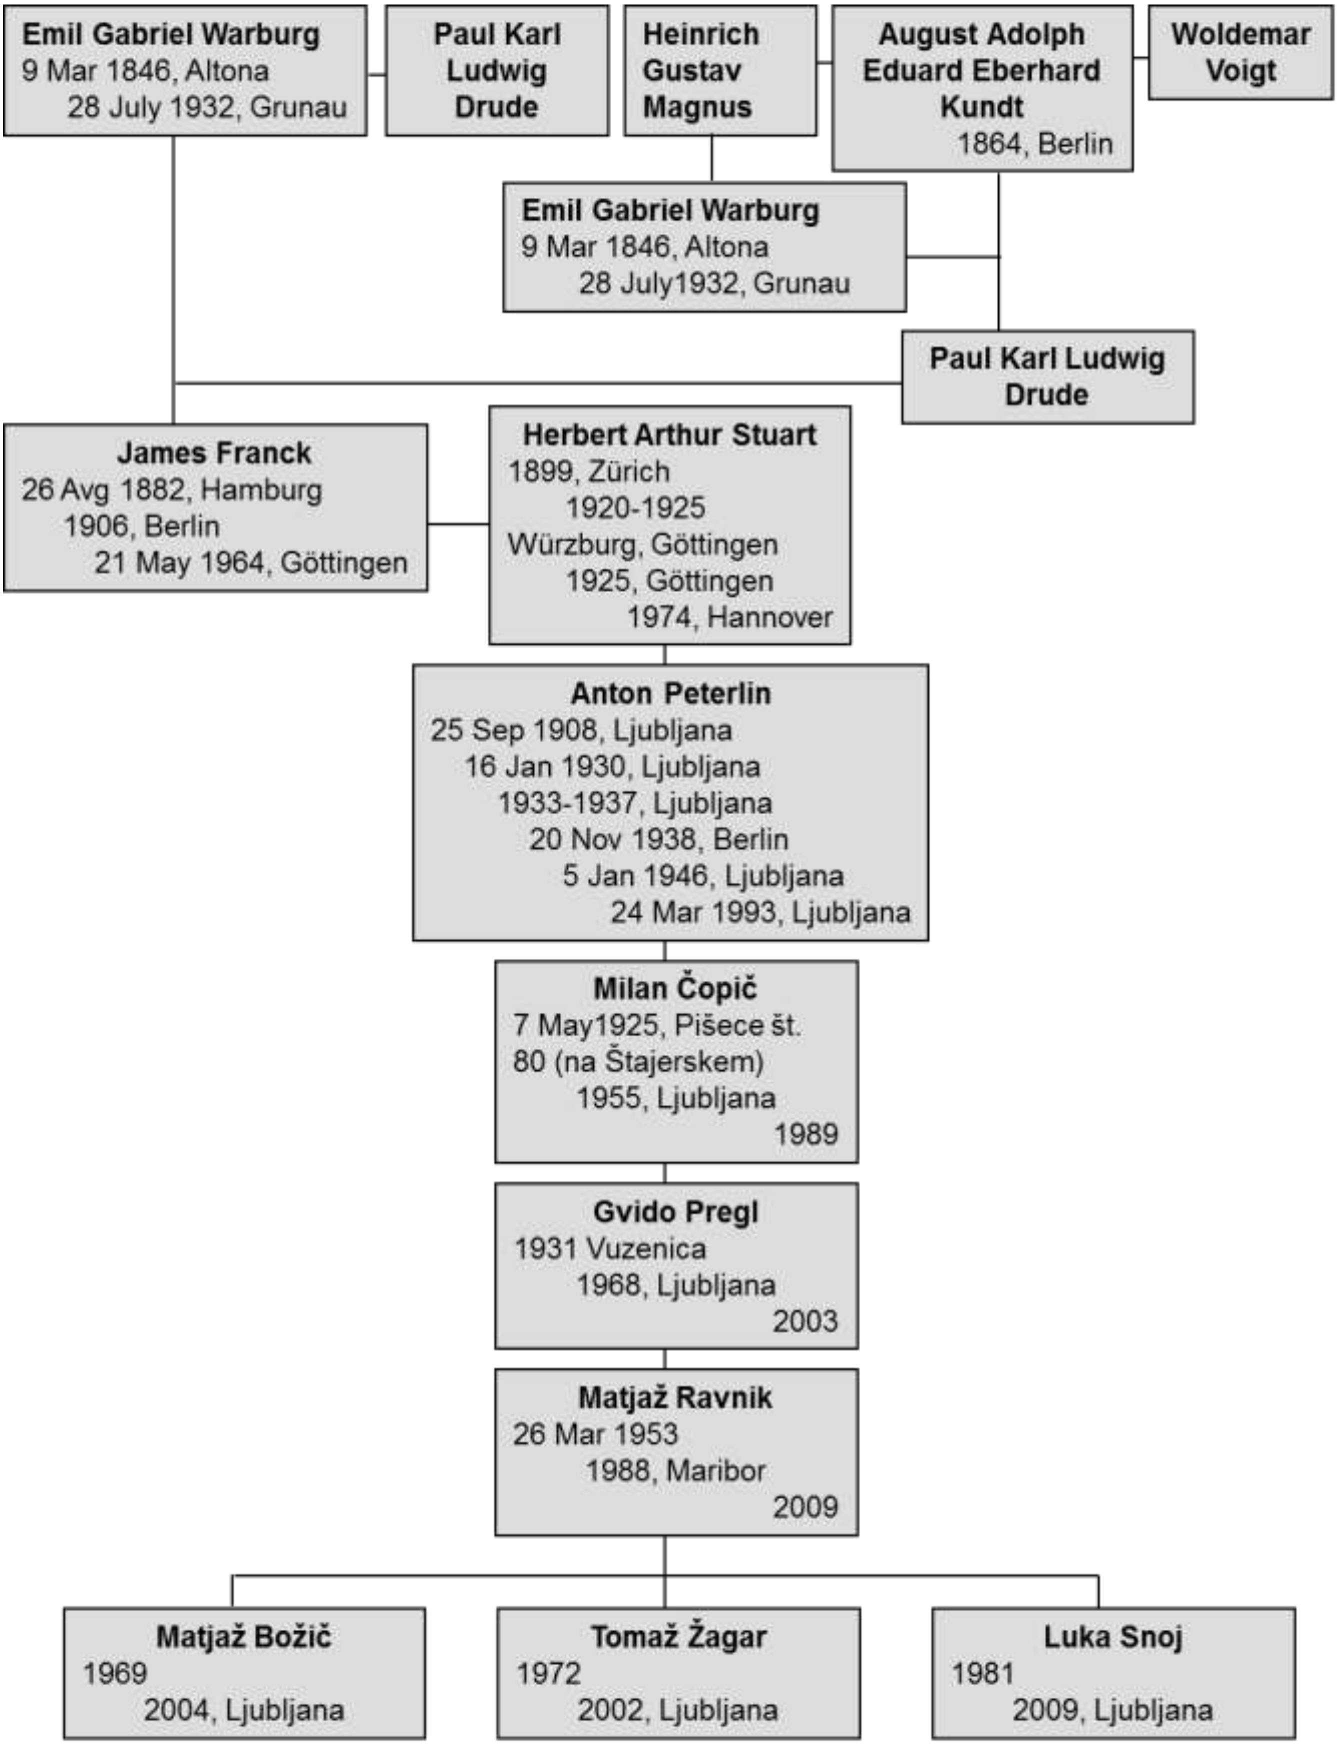

Figure 33-26: Matjaž Ravnik's academic ancestry up to German vacuumists Warburg, Kundt, Magnus and Drude

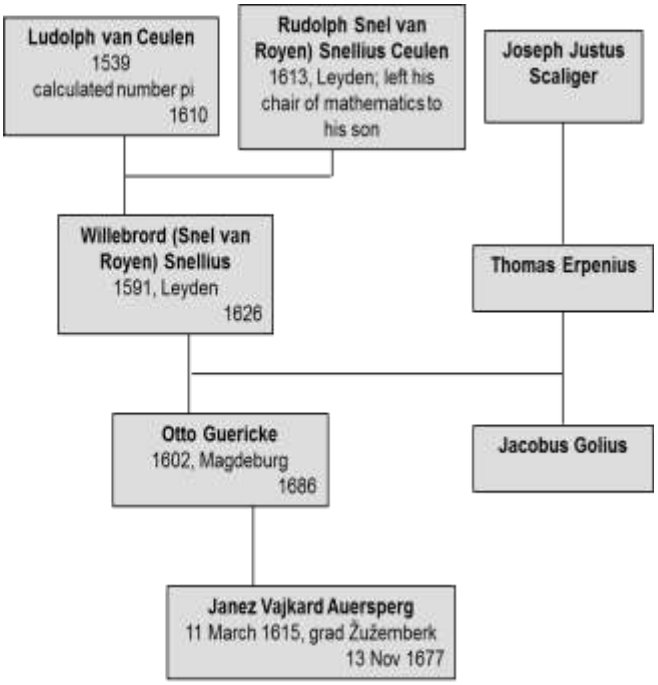

Figure 33-27: Academic ancestors of Otto Guericke as the vacuum pump inventor and a kind of teacher of his decade and a half younger prince of Auersperg

would be comparable to the (alleged) Indic pioneering invention of the infinitesimal calculus. As the Europeans did not know or did not want to introduce the Indian philosophic concepts into their own traditions, their ideas of the zero as well as about the limiting approach remained as an unwritten piece of paper (tabula rasa) like vacuum experiments, which had indeed worked successfully in Europe over the last four centuries, but no one in Europe and its satellites really knew why they succeeded. Similarly, the modern English cuisine enjoyed and its borrowed goodness all over the world of English colonies, while it never really Anglicized those borrowed cooking knowhows. The vacuum technology was gaining profits, while its theoretical background remained a mystery and soon even an unwanted object of guesswork, like that of silencing the infallible doubters of the impossible foundation of the Copenhagen Manhattan interpretation of quantum mechanics with the famous shut up and calculate included. Similarly, of course, behave the dogmas of the Christian faith along with the Credo quia absurdum. It is by no means unacceptable for European people to believe in such impossible dogmas, while, for example, they seem to sound funny to the traditionally unbelieving Chinese. Through the lovely happening during the last century, it has become clear within the debates about the reality of the results of vacuum experiments, that the vacuum cannot really be empty without any radiation energy because we only used to pump out the material substances from it.

With Einstein's connection between energy and mass, this would probably mean that the pumping of ultimate vacancies deeper beyond modern capacities is indeed a shift from the hollow to an emptiness, since the exhausted particles of the substance could, by the way, be generated from resided energy. Thus, the ball returned to the Descartes' line defined four centuries ago, on the question of what is in fact missing in an empty glass or in a vacuum receiver. The dispute between Otto Guericke and the Carniolan Prince Janez Vajkard Auersperg during their pioneer vacuum experiments in Regensburg in 1654, nowadays apparently gets young kids allover.

33.4.4 Projection of the Vacuum of the Future

A healthy common sense loses its absolute significance in parallel with the developments of modern science. First, the Copernican Galilei replaced the common sense with a more experimental way of perceiving nature, and then Newton even renounced his promotions of any common sense's hypothesis. Thomas Young and Fresnel subsequently discovered phenomena that opposed the experiences of common sense. This means that modern experimental tools are becoming more accurate than human senses which can no longer be fully trusted, at least not in science; of course, they remain valid with interpersonal relationships and in love affairs. As a memory of the former values, human senses still define the language of science because the physics in its classical form is divided into mechanics (touch, hearing, organs of balance for gravitation), optics (vision), thermal theory (touch again), and electromagnetism with the tongue as the original electroscope.

For Maxwell, the common sense was merely a handy illustration of scientific and mathematical reasoning. But such an idea somewhat overtook his time, since it consciously denied the objectivity of human performances, just as Galilean experiments had done before with human emotions.

In the following generations, the theory of relativity further subtly contested the myth of the absolute character of human imaginations. The quantum mechanics finally enacted the failure of human representations in all those dimensions and speeds that went beyond the normal human experiential environment. The human commonsense judgment remained in force as a limiting case only to the point where it was possible to entrust human senses by the famous Prešeren's joke: Just the shoes belong to the equestrian; outside the visible and outside the area of Jernej Kopitar's professionalism we should live the decisions to the other expert criteria. With this, anthropomorphism lost its ground, although with the newly advanced technologies the boundaries of human perceptions and normal living environment may possibly extend into the promising future of the Internet and the Anthropocene.

The development of scientific mathematical reason naturally influences popular common sense, especially during compulsory schooling and possible readings of the popular scientific periodicals. So, today most people no longer doubt that the Earth is round. We similarly believe in the movement of the Earth, which had seduced Galileo and at the same time celebrated him as a scientist. We also accept Newtonian colors as an objective property of light, and not merely as the consequence of the physiology of the eye or painters' mixes of colors that the poet Goethe wanted together with the revolutionary friend of the nation Jean-Paul Marat. The independence of the gravitational acceleration from the mass, however, already pushes the Aristotelian common sense to the problem, while the wave properties of electromagnetic waves and light still do not interest much the folks' common sense.

The development of physics of small and fast particles has limited human common sense reasoning to the areas that can still be controlled by the ingenious human organism.

The healthy common sense has a delay of several centuries behind the fundamental discoveries of physics. How about the language used in the conversation? According to it, the Sun would still rise, its rays are more particles than waves; its heat does not seem to depend on the motion of particles. The conversational language remains deaf for changes in physics development or stay behind for a great space of time.[3568] Thus, vacuum still does not have the right position in today's spoken languages, although we often joke about shifting from the hollow to the empty, or about the fear as the cavity which has nothing around.

The feedback reappearance of scientific achievements in commonsense opinions of the majority has a strong backward impact on the material support of science. The opinion about science was poor in the main Western European research centers around the years 1710-1740, 1930 and 2020, and good in 1660, 1800, and 1900. The high opinion yielded more research money. After the First World War, the Germans set up committees against restricting school hours of mathematics as A. Sommerfield recalled,[3569] and the doubts were even deeper following the subsequent economic crisis. Misconception in science opens the door to parapsychological bioenergy resembling spiritism, Mesmer's or Wilhelm Reich's ideas, which are like the aliens of Erich von Däniken. Of course, trust in science also has its own geographical component, since the Hindu records in the Vedas greatly outweigh the modern scientific truths for their believers, like the Koran for strict Muslims or the Bible for Christian of Jewish fundamentalists. However, we cannot easily connect the reputation of science among the average people with their economic or scientific everyday life:

1. Wars do not always reduce the popularity of science; if the First World War did it, the effect of the Second World War was quite opposite.

2. The fluctuations in the popularity of science cannot be uniquely linked to periods of economic crises that follow much shorter intervals; nevertheless, there is a connection between the two phenomena.

3. In the first half of the 19th century, the popularity of science promoted by stream engines

[3568] Price, 1980, 45–65.
[3569] Heisenberg, 1975.

and telegraphs strongly stimulated research. After the First World War and during the great economic crisis, quantum mechanics with its overpraised statistics was born in the middle of the great unpopularity of mathematics.

4. The unpopularity of science among the broad masses of people does not always mean less money for it. Those who control a lot of money appropriate decisive power without the (democratically) fooled masses of common people, even though their influence could also be considerable.

In this sense, it is very difficult to predict which move might influence in one way or another the popularity of vacuum techniques research in the eyes of the average common people or even in the eyes of the rulers who have the decisive keys of money bags in their hands. Very difficult, but in no way impossible.

33.4.5 General Conclusion

The modern development of astrophysics establishes the possibility of observing history from the global perspective of the development of the universe from the Big Bang down to its contemporary contradictions. Thus, the history of physics becomes part of physics with the exploring of a vacuum included, after Karl Marx has long argued for the present as the last & final part of history. Naturally, the astrophysics offers just a bird's eye view; with it we cannot outweigh the efforts of individual types of sciences, each of which is trying to master their field of research by special centuries-old traditionally embedded methods. Astrophysical view of the world, of course, will never afford to look at the individual or to any narrower problem of the development of vacuum technologies, but at most it will be able to statistically describe its wider environment. By doing so, it will give new boundary conditions to individual histories and the realms of research itself, but it will by no means eliminate the differences between them or bring them together in a unified science of the theory of the entire global Anthropocene as a new era in which man does (not) responsibly perceptibly affects the Earth. Such a thing would be simply too expensive, just as the genome exploration had to be limited to a few thousand samples, knowing in advance that this was insufficient for serious insight, but barely enough to look at the humanity from a distant bird's-eye perspective. Of course, nobody looks a gift horse in the mouth, and the researchers of the genome certainly did not reject their good wages because of some deep doubts about the meaningfulness of their projects.

The basic problem of physics and its history remains the daily metamorphosis: today, we are exploring physics as part of the exact science, but tomorrow our today’s work will become part of the history of physics as part of the humanities, at least from the American perspective of the division of research disciplines. The affair of professor of physics and mathematics, Alan Sokal (* 1955), who mocked the philosophers of science,[3570] shows a never-ending gap between the exact sciences and humanities; so, we can think of how physically hard or even schizophrenic must the physicist feel during his/her yesterday's and tomorrow's research work, when his/her own achievements are immediately attributed to his/her humanistic sworn enemy. Competition between Exact Sciences and Humanities is a consequence of the modern school system, which today has the upper hand that prefer the first; the Jesuit or Classical Chinese school examination system favored humanities and did not allow such severe conflicts between the two ways of acquiring knowledge. I feel like a physicist and a trained historian in the same person - perhaps this gives me the opportunity to resolve the conflict between two cultures of Charles Percy Baron Snow of the City of Leicester (* 1905; † 1980) with future Sokals included to ensure some tolerance between the two conflicting parties that would bring better funding to both? The dispute between European Exact Scientists and Humanists looks like a divide et impera: in fact, both sides glorify their own search for the truth, while a true-minded true-speaking politician would be disaster for his party in the pre-election battle. Of course, we could afford only a (silent) alliance between the two ways of finding the truth against the half-truths of the rulers who decide about the distribution of money among the researchers.

[3570] Sokal, 1996; Sokal, 1996b.

Conclusions need deep thoughts. Thus, dear reader, we reached the end of the book, the final conclusive chapter on the vacuum, that is, ~~to~~ the edge of voided nothing itself. Of course, it was always clear that the vacuum is empty just by name, otherwise it is full of wonders and even very useful. It is indeed quite empty, but with its emptiness it allows the adjacent fullness to play a decisive role in recent and modern technologies. We do not explicitly know what the vacuum is missing and what its different full stuffed neighbors have. But, in the limelight of development of the vacuum techniques of the last four centuries, we gradually developed a feeling about where the whole history of science is focusing; we are aware of the sorts of future scholarly education and, above all, we could predict almost all about the kind of technologies our children and grandchildren will design.

The history of learning and the development of past vacuum techniques is our new signpost. The wrong moves, slow, uncomfortable congestions and triumphs of the former days are lighthouses that a clever observer uses to avoid the future obstacles. Perhaps the history as the teacher of life according to Cicero's Historia magistra vitae is sometimes extremely unsuccessful, because the powerful people obviously never learn anything from their past. But nothing like that maters in void vacuum. Again, and again, the same repeated mistakes of the mighty have their own charm that entertains us while studying them.

The vacuum technology has been an indispensable part of experimental physics for centuries. In its experiments with the smallest particles of the substance it established the modern physics. For half a century, vacuum elements have been the basis of most of the world's major industries: from fun to computers and accelerators. The modern theory of vacuum tailored the future of physics. On the way to such success, there were thousands of debacles and at least as many successes. It is the greatest pleasure for me that Slovenians greatly contributed to the development of vacuum technology. Therefore, I may not be reluctant to over-emphasize their successes in any way.
Three centuries passed between the first interventions of Slovenes in the development of vacuum techniques under the prince of Auersperg and Peterlin's design of the Jožef Stefan Institute. In the meantime, the situation changed radically: vacuum techniques became the driving force of economic progress, and Slovenes became a recognized European nation. All this and something else was told by our story...

Figure 33-28: The first Slovenian vacuum researcher Janez Vajkard prince Auersperg with a modern cathode tube under his armpit observes his and Guericke’s emptied hemispheres as designed by Urška Južnič in 2004

In 1993, when my classmate as editor-in-chief of the journal Vakuumist dr. Peter Panjan invited me to write for him, as an American with Slovenian roots I saw this as a first-rate opportunity for effective propaganda of American scientific criteria in Slovenia. Above all, it was the fact that the history of vacuum and vacuum techniques within the history of science in the United States has been a full-fledged research industry with many important chairs at leading universities developed throughout the last century. The Europe is lagging somewhat behind here, and Slovenia must became much more interested in promoting its past merits. Slovenes still do not have any kind of department, nor the institutes focused on the history of sciences. Unfortunately, the only Slovene journal designed in that direction, the magazine Zbornik za zgodovino znanosti in tehnike, was stopped shortly after the death of its main advocate and editor, my friend Fran Dominko.

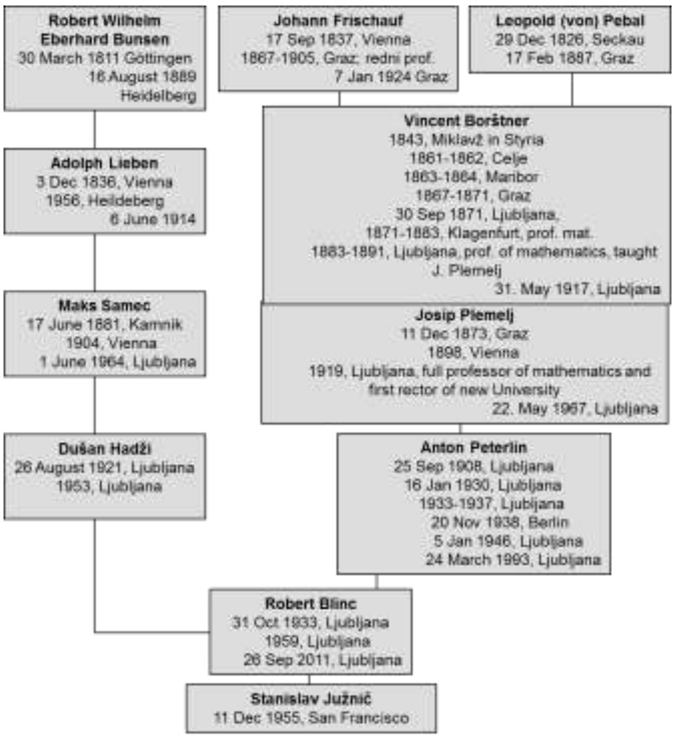

Figure 33-29: Stanislav Južnič's academic ancestry tree following the physics studies of Peterlin's advisor in his doctoral studies of physics Stuart down to the "inventor" of Phlogiston, Stahl

In Slovenia, the local merits have been almost forgotten because of the propagandist aggressivity of foreign historians of sciences; as urgently as possible, the Slovenians need to catch up with the progress of histories of sciences of the Western world. The opportunity missed never returns. The problem was mainly that in the US the history of vacuum and vacuum techniques inside the history of science is a part of the humanities, and in Europe, above all the working scientists themselves are trying to keep hands on it. I have always been aware that this is primarily an ideological dispute in which a scientist seeks to maintain a monopoly over the history of his own science, even though this is essentially impossible. Even a politician can outsmart historiography only temporarily, because sooner or later his or her hidden mostly greedy motives became obvious. In any case at least in the next generations of more independent researchers. The historian of vacuum and vacuum techniques inside the history of science uses historical methods in his work, rather than physical or chemical methods; therefore, he or she must necessarily have (also) a historical education if he or she does not want make too many mistakes. As a result, I graduated in physics but I got my masters and a doctorate in history. I've already figured out where the main problems might be.

During our half of a century long research of the history of vacuum and vacuum techniques within the history of science we discovered and proved many important merits of the Slovenian people. I would like to emphasize, basically, the far too little-known fact that the beginner of vacuum techniques and the inventor of the vacuum pump Otto (von) Guericke explicitly stated in his only book the comprehensive help of Janez Vajkard, Prince of Auersperg, born in the Žužemberk castle. Guericke did not say much else about any other person in his book, which shows how great and highly esteemed was Janez's help which facilitated the development of the first vacuum pumps. Because at that time the first Slovenian vacuum researcher Janez Vajkard Auersperg was influential first minister of the entire Habsburg monarchy in a position just below the emperor, we can think that Janez's (John) thoughts about the vacuum were not irrelevant. Of course, we also collided with the doubts: how could a son of a small nation beneath the southern slopes of the Alps so develop such basic vacuum techniques that he made him was a champion innovator? The answer is right here: it's true that the Slovene people today seem to be small, but that was not the case centuries ago. The smallness is merely a matter of belief and self-esteem. Slovenes had their giants of science and technology. Unfortunately, due to the underdevelopment of Slovenian history of science, they are somehow neglected compared to the Slovenian neighbors. The modern westerners used to write their Whig history of science full of neglecting of all other folks including the Slovenians, Chinese, Native Americans or Africans. It's high time for a change.

The idea, which flows from hundreds of our historical publications in journal Vakuumist is in its essence the promotion of self-respecting urgently needed for the Slovenes. It is an echo of the opposite directions that try to attribute the great achievements of Slovenes to others. The fact that the Slovenian vacuum techniques and sciences are still not as good as western European or even American, is our special concern. It was not so in the distant past. At the eighth ICTF Conference in Dubrovnik, held between 13 and 16 October 2014, the professor of Material Science and Physics from Illinois University, Urbana, Joe E. Greene (Joseph, * 1944) from Arcata 280 miles north from my native Californian San Francisco described the achievements of pioneering heroes of the history of thin films. Greene runs the Microanalysis Center in Urbana, halfway between Saint Louis and Chicago as editor-in-chief of the leading magazine Thin Solid Films and former editor of CRC Critical Reviews and Solid State and Materials Sciences. These newsletters are largely intended for thin films and vacuum researchers. Thus, Greene's history narrated in Dubrovnik presented the formation of thin films designs exclusively as Anglo-Saxon achievement, with an emphasis on the greatest genius of Michael Faraday.[3571] Was that really the case? Did all the major discoveries really grow up at the Anglo-Saxon environment? Is the English Industrial Revolution really the mother of universal progress on a global scale? Of course not, the point is that history is written by the winners. In addition, we have that naughty rule: first come, first served. Additionally, the Anglo-Saxon winners try to impose to all others their own language as the only relevant way of communication, and in doing so, they seem to be gaining an additional advantage, since they do not waste time with learning other languages. This imposing the English language is undoubtedly the worst of them all; in fact, the lack of linguistic knowledge turn people into a spiritual poor folks without widespread insights or even visions. If the scientists of past centuries did not write in English language, they did not write anything at all because the modern Anglo-Saxon historian of science does not understand their messages! The old science historians have been enthralled by the alleged Anglo-Saxon heroes of science. Today it is very difficult to dethrone them, as the Anglo-Saxons have been published myriads of exaggerated (self) praises. Since in the 20th century the Anglo-Saxon know-how seemingly dominated its rivals from other environments and continents, the Anglo-Saxon influential guys simply wrote the history of science to praise their own Anglo-Saxon scientific ancestors. In the background, there is, of course, great money and an extremely unpleasant severe racism: if the Anglo-Saxon scientists have always been smarter than others in the past, let them continue with such a business! Let us give them the Nobel Prizes, influential positions and recognition, while the Africans or anyone else could be a part of it only if they can come to Anglo-Saxon universities in the form of irreversible brain drain, which is in essence very like slave trade which once upon times deserted the coasts of Western and Central Africa between the 16th and 19th centuries. The westernized history of science, history of technology and even the modern research of industrial heritage used to be deeply racist and unfair to coloured and female folks.

The truth that should be published is entirely on the other side. The countries on the virtual periphery of world science, including Slovenia, the Middle East, Latin America, or Black Africa, were not lagging somewhat behind in development because their locals were above-average stupid or less able to discover or explore. They were deliberately pushed to the periphery so that now ruling scientists can continue to rule, although the ecological catastrophe of the planet Earth has long proven the wrongdoings of their rule. The history of vacuum techniques teaches us many things and even offers us guidelines for proper action: we learn pride and self-confidence of past generations led by the example of the first Carniolan vacuum researcher, Janez Vajkard Auersperg. Janez Vesel Koseski’s poem from the distant Christmas of 1845 teaches us: "Remember the magnificence of the works of the dead fathers, ... who despises himself, the subjugation is to the stranger's heel."

In fact, with modern trends, Koseski’s verses are becoming more and more relevant, perhaps even for experts in the field of vacuum techniques and thin films. Even if our times are rapidly changing. Yesterday, a young guy third of my age asked me what am I reading down there by the waterfalls of Sava river where Medea, Jason and his Argonauts interrupted their sailings downstream from Black Sea near their future Emona: “I read Herman Hesse, the grandson of Indologist and son of Indian born

[3571] Greene, 2017.

mother who introduced Indian vacuum and infinitesimal thought to westerners!" The youngster who listened to his car-producing loud techno music with his companions somewhat hesitated so I added: "You may google him…" "No, no…" he assured me "I'll remember him, its just like Ham-and-Eggs…" Well, that's the promising new generation, so I agreed: "Exactly, just Hesse has his s doubled…" Certainly, times they are a changing… without doubts towards the better ones?

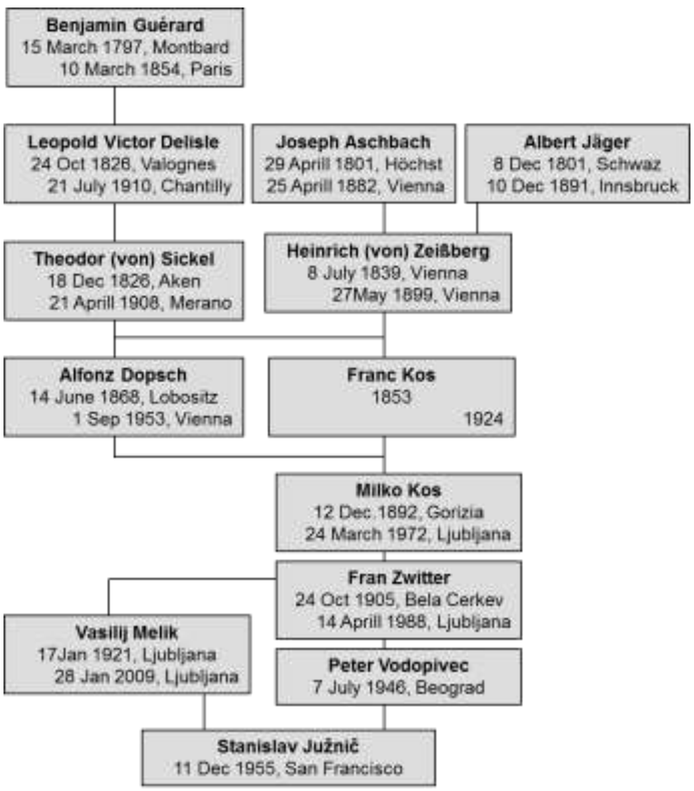

Figure 33-30: Stanislav Južnič's academic genealogy tree, following the branches of his study of the history of physics and vacuum techniques with accentuated Slovenes and underlined places of their studies. The ancestors were supervisors of the PhDs of their descendants. The picture shows the connection with Copernicus, whose book we discovered in 2006, forgotten in the dusty Ljubljana library.

34 Summary: as an Epilogue

Epilogue could be also needed. The principles of vacuum technologies can be described with a special emphasis on the Slovenian situation, as Slovenian researchers have constantly contributed significantly to its progress. The Slovenian areas raised up important vacuum theorists of the first pumps and pressure gauges. Let's repeat what we were talking about:

The research of vacuum and new materials was never exclusively westerners' domain. The empress Barbara of Celje was among the wisest designers of new materials of her era. In connection with the discovery of Copernicus' books (1566) in Ljubljana we described the vacuum research of his time. We discussed the books and instruments available to Slovenian ancestors in Copernicus' time in Carniola.

Trubar's year 2008 divided Slovenians again into "ours", and their enemies. Vacuum researchers are supposedly neutral at such kind of quarrels. It is a good opportunity to examine the opinions about vacuum and material science at Trubar's time. The opinions about vacuum at libraries of Trubar's time Carniola and Styria were researched to enlighten the scientists' lectures at Viennese, Tübingen, and Paduan Universities.

We have discovered an important contribution of the Auersperg Prince to the famous Guericke's vacuum experiments. We described the important cooperation between the prince Auersperg of Ljubljana and Guericke. Torricelli, Boyle, and Pascal's impacts were felt in Ljubljana very early. Later influence on the Ljubljana Jesuit school was primarily connected with Roman College and Bošković in his prime. We provided one of the first study of the history of physics based on the images of scientific instruments drawn in the manuscripts.

During his studies in Ljubljana College the first vacuum technology researcher from Carniola Johan Weikhard Prince Auersperg (Janez, * 1615) passed from the lower Latin Marian congregation to the higher Latin Marian congregation in 1626 which means that he just finished the study of Syntax (higher Grammar) and began his studies of Poetics. The supposition is that he entered the school as a beginner and finished it as the student of Rhetoric. The Prince Johan Weikhard Auersperg conducted a part of his formal training in Ljubljana and continued it in Germany and Italy. Who were his teachers who guided his teenage years? Auersperg eventually finished just few years of his lower studies in Ljubljana. Who were the leaders of Ljubljana lower courses who enabled and supported the work of Auersperg's formal teachers? Who were the other important locals who helped Auersperg's formal teachers to manage his teenage aspirations? And last, but not least, who taught Auersperg's teachers?

The teenaged Johan Weikhard Auersperg studied in Ljubljana, Germany and Italy where the stage was set for the first Torricelli's vacuum experiments. Besides professors who taught Johan also his own court is discussed including his confessor Ferdinand de Montegnana who also studied in Italy and published a technical book.

The manuscripts are keys for the advancements of modern history of European vacuum techniques after most of printed sources had been widely read and interpreted. Anonymous authors' opinions on vacuum and simultaneous Athanasius Kircher's works in connection with Kircher's patron, the Prince Johan Weikhard Auersperg, provide some insight into the time of anonymous writing. Both manuscripts seem to be the product of Italian scholarship not far from the borders of modern Slovenia between Venice, Padua, and Florence, but the way they entered the Oklahoma University Collection in US is still unclear.

The first air pumps among Slovenians are discussed. The early air pumps in now Slovenian lands were put in the limelight. Did the pioneer of vacuum techniques, the Prince Johan Weikhard Auersperg, brought one of them to his Slovenian manors? Ljubljana share of early steam engines research could be proved, especially with the Jesuits Grubers in mind. Geissler's and later vacuum tubes certainly connected Slovenians and all other European nations with modern air pumps.

Several centuries lost manuscript catalogue of Ljubljana Auersperg library was examined in search for the books about vacuum published in 17th century. The opinion and values of the authors were discussed in correlation with the library owner Auersperg's own vacuum research during his active collaboration in Otto Guericke's pioneering research. The connection between Auersperg's work for new vacuum techniques and his propaganda of the early modern science of Bacon, Galileo, and Kepler was claimed.

In Slovenian areas the erudite performed vacuum experiments already long before Geissler's glow discharges in dilute gases and Braun's cathode ray tubes were invented. The early vacuum experiments and books about them spread among the well-to-do Slovenian land people with the little help of the first Ljubljana prince Janez Vajkard (Johan Weikhard) Auersperg. The nobles, wealthy bourgeois, and monks bought and read them because they were aware of Auersperg's collaboration with Guericke on the early experiments with vacuum pump. It's hard to believe that any later exchange of the new inventions between Europe and Ljubljana was that quick, except maybe during the Napoleonian Illyrian Provinces. Therefore, we had to memorize the success of those days in public symbols of the *Slovenian Society of Vacuum Techniques*.

Books on Vacuum in the Former Cistercian Library of Sittich (Stična) were important source of local knowhow. The vacuum experiments and vacuum philosophy related books of the former Stična monastery was described. The connections of Stična library with the other libraries of today Slovenian regions were put in the limelight. The probable reasons for the Cistercian interests in vacuum techniques development were put forward. The former owner of most mathematics, physics, and vacuum related books in Cistercian Monastery Stična was the physicist and mathematician Ivan Dizma Florjančič de Grienfeld, one of the ablest literati of those days Carniola.

Capuchin's Vacuum in mid-17th century paved many ways. The most important Franciscan and Capuchin scientists connected with vacuum research were noted. Their scientific works kept in to Slovenian libraries are put in the limelight. The Capuchins Rheita, and V. Magni were considered as the most influential at today Slovene lands. The special concern was put on books describing vacuum at Capuchin's libraries.

Valvasor's research about vacuum and thin films grinding was illuminating. Valvasor's original contributions to the development of physics and techniques are put forward in connection with his fellowship of the Royal Society of London. The special concern is put on Valvasor's library with many Robert Boyle's books included. At the other hand Valvasor bought almost all works of Boyle's opponent Kircher. He collected the Jesuit's books, most of them connected with the Kircher's Roman College circle.

Valvasor grinded a Virgin Mary statue and put it at the front of Jesuit St. Jacob's Church in Ljubljana. He described his new thin layer grinding method in London *Phil. Tran.* and in Leipzig *Acta Eruditorum*.

Valvasor followed Volf Engelbert Auersperg's example while he collected books at his own library. Volf's brother Prince Janez Vajkard helped Otto Guericke at his Regensburg experiments as the first Carniolan vacuum researcher. Slovenes later adopted Valvasor as one of their own but did not provide the same treatment for the erudite Auerspergs.

The general of Jesuits Gabriel Gruber who built Ljubljana canal and palace was very proud of his younger brother the vacuum-equipment designer Tobias. Tobias Gruber's produced vacuum equipment for conventional portable outdoors measurements. His tools became so famous that he was elected for three terms as the president of Bohemian Society of Science, the predecessor of the modern Bohemian Academy. Early in 1804 Tobias Gruber renewed his vows to the Jesuits under the leadership of his brother general Gabriel. Tobias researched in Ljubljana and in other parts of Carniola just for three or four years, much less compared to his brothers, Ljubljana professors of technical sciences Gabriel and Anton Gruber, or their mother Josefa who died in her Villa Podrožnik in Ljubljana.

The first observation of the cooling of gases during their expansion in vacuum was described. The share which the naturalized Slavic scientist the Viennese T. Gruber gave to the early research was acknowledged with pride. We concluded our story with the usable explanation of his influences on the works of Joule and Thomson, and with the technological and industrial use of the Joule expansion in the early race for the condensation of the gases previously considered permanent.

The first vacuum experiments were carried out in Florence with the mercury from Idrija mine. Essential role in distribution of the Idrija mercury belonged to the Idrija Mine directors, especially Abondio Inzaghi and his grandson Franz Johan Inzaghi, a second cousin of the mother of Alessandro Volta. Franz Johan Inzaghi hired first-class employees. Among them were Johan Anton Scopoli, B. Hacquet, and especially the Bohemian pharmacist Ernest Freyer.

Volta's investigation of gases contributed to the progress of the Idrija mine. His relative Franz Johan Inzaghi arranged for Volta a hefty amount of Idrija mercury required for the manufacture of barometers and thermometers in Volta's new "physical theater" at the University of Pavia. Freyer used his knowledge of vacuum distillation cleaning methods for Idrija ore also to provide the good supply for Volta's classroom and for Dutch manufacturers of vacuum pumps, including Musschenbroek and Hermann Boerhaave, the teacher of many leading scholars serving the Viennese court. The consumption of mercury for scientific purposes admittedly was not great in its bulk, but it strongly contributed to the prestige of the Idrija mine. Franz Johan count Inzaghi scored his biggest success at the end of his leadership of the Idrija mine due to the huge Spanish orders intended for the amalgamation of Mexican and other Latin American ores of silver.

Because of connections with relatives Inzaghi the Voltaic electrophorus designed for multiple charging electrical Voltaic battery and gun - eudiometer for measuring air quality were extremely quickly acquired for Ljubljana higher studies' physics-chemical cabinet. Inzaghi was in touch with Volta even after his return to Graz, especially in time of Volta's wedding in 1794.

Bošković's description of vacuum and forces within it were put in the physicists' limelight of his and eventually also of our times. On 300th anniversary of Bošković's birth his vacuum theory and two vacuum experiments connected with his name were described. One of them was Bošković's appeal for water filled telescope compared to vacuum telescopic observation of parallax, and the other was Lana's vacuum balloon versified by Bošković's Ragusa compatriot and student Brno Džamanjić (Zamagna).

Ljubljana native's books about vacuum in Brussels are noted on 300th anniversary of Johann Karl Philip Cobenzl's (Kobencl) birth in Ljubljana. The path *per aspera ad astra* of Carniola-Gorizia family Cobenzl is described with a special attention put on their friendly relations with Ruđer Bošković and their acquisitions of book related to modern vacuum techniques. All that and much more was achieved by the next to last generation of Count Cobenzls headed by the minister plenipotentiary of Habsburg Netherlands Johann Karl Philip Cobenzl. The role of Johann Karl Philip Cobenzl's first rate Brussels library with technical-vacuum books and art collection proved to be decisive for the success of his family inside the freemasonic freethinkers' networks of Europe of his era. Although Johann Karl Philip Cobenzl never read his vacuum-related and other books but preferred his secretaries to read and comment them for him, the new books and journals helped his work in the modern times when the good and timely news paved the way for the right economic activities in vacuum and other industries of the area of modern Belgium and Luxemburg which the native of Ljubljana Cobenzl managed under the name of Habsburg Netherlands for nearly two decades.

Ljubljana vacuum technique after the suppression of Jesuit Society is described on 150-anniversary of the death of first head of Ljubljana physics-mathematics cabinet, the baron Bernard Ferdinand Erberg. The first three decades of Ljubljana high university level philosophical studies with vacuum technology inside physics-mathematics cabinet is described. For the first time in historiography Mihael Peternel's description of the preserved part of first Bernard Ferdinand Erberg's instruments accomplished a century and a half ago is used, as well as Gabriel Gruber's orders dated in 1768, the catalogues of vacuum and other instruments which Anton Ambschell signed in 1779 and 1785, the list of new purchases between the March 1781 and March 1782, as well as A. Gruber and Schaller's catalogues. The role of Carniola Estates General and even more of Carniola Society of Agriculture and Useful Arts was decisive in material support of acquisition. From the dynamics of purchases and their maintenance we try to figure out the prevailing interests of the leaders of Ljubljana instructions of mathematical sciences in those days.

The vacuum equipment of the first Ljubljana professor of physics who wasn't a monk is put into the limelight. Although Johann Philipp Neumann came from Moravia, he unforgettably marked the development of vacuum technique in Ljubljana. His professorship in Ljubljana Philosophical Faculty with physics as its main part is described. The vacuum equipment in Neumann's care which he demonstrated to his students are put into the limelight. Neumann published his research of vacuum techniques in his textbooks and in a paper; he began publicizing just few months after he left Ljubljana. We focus on the row of his able descendants which he educated at his Ljubljana chair. On the first place Neumann's collaborators Jožef Jenko and Matija Kalister supplied him. Later Neumann sent Franc Prem from Graz as Neumann's replacement, and after Prem returned to Neumann's Graz chair Neumann's best student Janez Krstnik Kersnik was appointed in Ljubljana and kept his chairs of physics and chemistry for almost half of a century. Many archival documents about Neumann's work in Ljubljana are published for the first time in this book. Besides being a pioneer of Ljubljana vacuum techniques Neumann was also a close collaborator of the composer Franz Schubert who himself tried in vain to get a lecturing position in Ljubljana.

The vacuum balloons developed parallel to hot-air and hydrogen balloons in the 17th and 18th centuries. We were particularly interested in Vega's opinion on vacuum balloons and the problem of the modern development of such devices. The life and works of very first Slovene airman and the pioneer of ballooning is described with the early Kraškovič's effort to materialize a century and half older Lana Terzi's ideas of flight under vacuum balloons. We find the technological problems that bothered their effective use on the first place. The first Slovenian ballooner passed away in Dubrovnik suburbs soon after New Year 1823. The complications following his testament unveil the difficulties of his personal life and even more his professional interests in vacuum techniques. Although after his higher studies he seldom visited his home country in Carniola, Slovenians should be proudly aware of his achievements.

The first vacuum research at the Jesuit school in Ljubljana was linked to the college in Rome. That is why we have specially examined the characteristics of Slovenian and the Italian environment under the influence of Guericke's, Boyle's, Torricellian and Pascal's successes. The progress of the technology was constantly accompanied by the problems of vacuum theory. Does vacuum contain anything, and what could that thing be? Like Parmenides, Descartes saw the problem of expression in his debates about the existence of an emptiness. Whether the empty glass still contains air, Descartes rhetorically asked? He preferred the "plenists" over "vacuuists" to fill his world with the eddies of the ether. Newton did not like the Cartesians, and instead of the notion of ether he used the "absolute space" in his mechanics. In Fresnel's theory, which buried Newton's particle optics, ether had a real density inversely proportional to the value of the refractive index. According to Fresnel's example, many researchers were composing their theories of ether for different basic kinds of waves, while Maxwell considered that a single ether was enough. Stokes' speed of the Earth with respect to the ether varied continuously from zero on the surface of Earth to a constant at sufficiently large distances, which was by no means disliked by A. Lorentz. Einstein combined the term "ether" with the gravitational field and the "space-time" structure. Nevertheless, his theory of relativity destroyed the classical theories of the ether. Therefore, in modern physics, the term ether is no longer used except in Tesla's networks, although we present a modern swirling vacuum in exactly same way that Maxwell in 1871 represented his vortex ether. In modern theories of "everything", the vacuum has a rejuvenated central basic role; but it behaves differently, especially by our thinking about the properties of the space.

We presented the cathode rays in the middle of the 19th century as an introduction to modern techniques of vacuum thin films, especially the vacuum metallurgy. We have illustrated the competitive efforts to achieve a perfect vacuum, which of course never happened, but nevertheless paved the way for further progress, resembling the related simultaneous quest for the absolute zero temperature. Within their efforts, the researchers developed vacuum insulation and above all thermos, an indispensable tool of a modern housewife. We described the way of thinking of those times with the search for a perfect vacuum, which certainly failed, but enabled many discoveries, among them the famous thermos flask. In Edison's hands vacuum became the foundation of the modern electric light bulbs. The science turned the light on and enabled the discovery of X-rays and electrons. In the hands of the greatest inventor Edison, the vacuum has smoothened the way to modern light bulbs, which have been shining for almost a century in nearly unchanged forms. They allowed the scientists' night research and thus almost doubled their efficiency, just like the European logarithms did two centuries earlier as borrowed from Babylonians' quarter square multiplication algorithm tables and Indian mathematician Virasena's concept of ardhaccheda. Curious about what was hidden in the smallest submicroscopic objects, the German researchers developed an electron microscope. They put in the gigantic energies that promised the discoveries of new particles. People wanted to see what's behind the smallest particles and suddenly we had the electron microscope. Everybody wanted high energies and Rutherford's successors developed the first accelerators. Their research developed into ion implantation. We concentrated on the limited period from the "invention" of the ion implantation in 1905 until about 1978, when ion implants had come of age. We described the invention of ion implantation and its development until the Second World War II. We reviewed the development of the use of ion implantation for the transistor industry after the Second World War. We presented the use of ion implantation in semiconductor devices up to about 1978, when ion implants have come of age and began to be used in other areas. Special concern was put on the use of ion implantation in the metallurgy of recent times. We also described some details about the echo of the research of ion implantation among Slovenes. Rutherford's successors have already developed the first accelerators. From their research, ion implantation was designed. Between 1905 and 1978, it developed into a mature form of technology. Its main success was the transistor developed in my native Silicon Valley, which quickly became established in Slovenia.

We discussed the life and research of J.J. Thomson, a famous leader of the Cavendish laboratory. His key contribution in the "discovery" of the electron is described. His relations with contemporaries that made him discover the "electron" for the generations to come are described. We also analyze Thomson's research of "positive rays". The echo of his successes among Slovenian contemporaries is mentioned. The detection of X-rays and electrons crossed the threshold of modern science. Among the most successful vacuum technology users was the "discoverer" of the electron J. J. Thomson, the renowned director of the Cavendish Laboratory. We summed up Thomson's research on "positive rays" and the echoes of his discoveries among his Slovenian fans.

The investigation of the bombardment of atoms with electrons triggered complications which prompted the discovery of Auger electron spectroscopy. We have investigated the early results of bombarding matter with electrons. The most interesting were the events surrounding the discovery of Auger's spectroscopy, also connected with one of the first successful female researcher scientist Lise Meitner. We were interested in the first successes of the then researchers, especially the lovely Jewess Lise Meitner. We explained why a lot of time has elapsed before the Auger spectroscopy was successfully introduced for industrial purposes. We showed how they met the needs for measuring the properties of industrial thin films in recent decades. We have listed the strong sides of Auger's method in modern industry. We highlighted the advantages of modern Auger's spectroscopy and mentioned the fourth decade of its use in Slovenia. The special concern was put on the application of Auger's method in Slovenia.

We summarized the development of plasma research, probably the most promising among the modern vacuum technologies. Overall view gives us some insight in the past also in the future of our industrial world. We have shown that the vacuum really was once the second term for nothing, but today it indeed links almost all the technical achievements around us. Sputtering the thin films on the walls of the tubes and sputtering the cathode initially disturbed the researchers for almost a century, and then turned into the most promising forms of modern technologies. We emphasize the Slovenian contribution to vacuum technology from the Auersperg prince to modern successes.

The end of the First World War brought the foundation of the long-awaited renewed University of Ljubljana. Among the first professors, the important vacuumists were installed there in the departments of physics and chemistry and later at the Institute of Electrical Engineering. Among them were A. Klemenc and Hugo Sirk of the Slovenian genus. Sirk experimented with radioactive thorium in cathode ray tube and with plasma in a magnetic field before the First World War. In 1928, he took over the Department of Physics at the University of Ljubljana from his four-years-younger inventor Nardin. In the Slovenian metropolis Sirk studied X-rays. In Ljubljana, he proved to be particularly interested in exploring the magnetic effects of X-ray scattering with the help of Anton Peterlin.

Some people were rich and wanted to have fun. People love entertainments and Slovenian Codelli invented the television, although, finally, his American competitors won the prices. We are special proud to claim very important Slovenian contributions to the past development of vacuum technology. And we are even more proud that the research continued in the fertile directions in this small but effective middle European land. The Slovenian Codelli and Russian emigrants in America developed television for all of us. Baron Anton Codelli was the first to use the cathode-ray electronic television on Slovenian soil to be able to spread his European patents to the US. Therefore, in addition to mechanical scanning and mobile optical devices, his third option was described entirely by electronic television without movable mechanical parts. In the electronic version, he also retained the basic idea of recording and receiving the image along the spiral so that the image had denser elements in the middle than on the edges.

At the Ljubljana Institute of Electrical Engineering, Vladimir Šlebinger assisted Marij Osana between 1933 and 1935 after he abandoned television research at von Ardenne's lab in Berlin. From the television and computer screens, Slovenian inventions always watched us. The cathode-ray tubes in the screens were or still are, immediately behind the bulbs and thermos, one of the most long-lived vacuum products, which obviously do not intend to withdraw from the market completely anytime soon. In any case, we have incorporated many important Slovenian achievements into modern vacuum technique, which we are reasonably proud of. The book deals with the development of vacuum technologies with a special concern put on the Slovenian researchers.

Cauchy's Vacuum Theories in Gorizia were among the best Slovenian areas ever produced. The early development of vacuum enterprises Leybold and Heraeus in German part of the Middle Europe is discussed. Their success followed the most important achievements in the research of the vacuum theory at the border of Slovene Middle European lands that Cauchy accomplished in Gorizia in the years 1836-1838. By using French and Italian archive sources we describe Cauchy's life and work in Gorizia for the first time in historiography. We discuss the main Cauchy's scientific collaborators in Prague, Vienna, Graz, Ljubljana, and Gorizia. Cauchy's work considerably influenced the later development of central European vacuum research from Balzers to modern Slovene inventions.

The Early Japanese Vacuum Techniques developed from the great far-eastern traditions. The vacuum pumps entered Chinese court in Hallerstein's time, but eventually received less interests compared to the Western astronomy. One of the reasons for the Chinese doubts was the nonexistence of the broader scale technical use of vacuum or electricity during the Hallerstein's lifespan. The vacuum and especially Leyden jar research entered even easier the Japan of Hallestein's times when only Dutch and Chinese had some Japanese trade privileges, because at least the Leyden jar was essentially Dutch invention.

Slovenian-Croatian vacuum and related instruments exchange in Illyrian Provinces was introduced by

Raffaelle Zelli (Zell, * 1772; † 1817) who was professor of mathematics and physics in Zadar. In 1808/1809 he was appointed the director of Zadar Lyceum and at the same time he became the personal chemistry tutor of the duke of Dubrovnik marshal Auguste-Frédéric-Louis Viesse de Marmont (* 1774; † 1852). Marmont got the prestigious job of the Governor general of Illyrian Provinces and took Zelli with him to Ljubljana. Zelli became the supreme inspector of all public schools. In Ljubljana, both became frequent visitors of Žiga Zois' (* 23. 1. 1747 Trieste; † 10. 11. 1819 Ljubljana) house where they discussed vacuum and Voltaic experiments. Many vacuum and other books from Ljubljana Lyceum libraries were shipped to Zadar to help the Zadar Lyceum. Marmont established his excellently equipped laboratory in Ljubljana Bishop's house where he staid between 16. 11. 1809 and the beginning of the year 1811. Upon his farewell he donated all his equipment to Janez Krstnik Kersnik's (* 26. 3. 1783 Moste by Žirovnica in Upper Carniola; † 24. 6. 1850 Ljubljana) physics-chemistry Cabinet of Ljubljana Central schools. Among his gifts were fine analytic balance, Voltaic pile capable of 100 V, Galvanic battery with 100 elements copper-zinc, distillation apparatus, and many other vacuum related instruments. Marmont certainly learned a lot from his Zadar tutor Zelli and their support of the Ljubljana school laboratory could be described as the very first successful collaboration between Croatian (Zadar) and Slovenian (Ljubljana) vacuum researchers. In 1811, Kersnik inventoried his laboratory equipment. Some of his vacuum and other instruments selected by the present author were displayed in the exhibition in Ljubljana city museum opened by the president of France on May 11, 2009.

The main points of Napoleonic governmental changes influencing Zois's vacuum science and Kersnik's education in vacuum techniques were put in the limelight. French revolutionary novelties accompanied the dismissal of last tracts of the Jesuit's centennial education of physics and mathematics at Ljubljana higher philosophical studies. The main points of the life, lectures, and scientific works of the Ljubljana professor of physics and mathematics serving in the Illyrian Provinces are put forward, most of all Gunz, Kersnik, and their learned friend, Zois. The lists of their scientific-didactic vacuum equipment were provided. The relations between the leading literati of those days Ljubljana is given, including Nodier, Vodnik, and Ž. Zois. Their relations with the vacuum researchers of their capitals is given, the old one at Vienna including Jurij Vega, and the new one at Paris including Lalande, Laplace, Lagrange, or Biot. The relevant sources for Gunz and Kersnik's work at Ljubljana are their mathematical books and Kersnik's vacuum didactic school equipment.

The special attention was put on the schools at Gorizia, Trieste, Koper, and Zadar. The destiny of Napoleon's scientific ancestry at Slovenian lands was researched with the surprising conclusion that the Restoration brought almost no changes, because the Ljubljana professors of science kept their chairs also under Metternich's regime to support the poetical thoughts of Gunz' student, Jovan Vesel Koseski: »The changes are only damages, just few of them remain«. The absence of changes resembled the similar situation four decades earlier after the suppression of Jesuitical order while the reasons for that curious fact were again the same: there were so few technically trained professors in European peripheral towns that any ideological purges were out of the question until the culminations of ideological apartheids in 20th century.

Zois' circle is the key for understanding of the Illyrian provinces knowledge about vacuum in Napoleon's era. Zois' vacuum steel producing enterprise was compared with Kersnik's notes of his school inventory. We examined all preserved catalogues of Zois' library with care. Zois' scientific readings were compared with Valvasor's, Erberg's, Auersperg's, Lyceum's, and other libraries of the era. Gruber's influence on Zois' book taste was proved including Zois' passion for Jesuit Bošković, Franklin, and Newtonian science. Zois' acquired minerals and books under the influence of his previous close friend, Hacquet. Hacquet also advised Zois' ordering of the numerous scientific journals dealing with vacuum research. Vodnik's collaboration with Zois is reflected at Zois' literature on vacuum, which helped Zois and Vodnik on their invention of the Slovene Natural Sciences terms. Besides well-known Kalister-Korn's selling catalogue of Zois' books at NUK, the earlier probably Kopitar's (1803?), Schober's and Zupan's catalogues on unbound sheets kept at ARS were also used.

The overview of Tesla's vacuum technique makes nice anniversary of introduction of the unit tesla. Nikola Tesla was born century and a half ago as one of the best researchers of vacuum discharges. Tesla's quarrel with the famous J.J. Thomson was described in some detail. His scientific and other connections with Slovene lands were put in the limelight. The claim was forwarded about the high quality of Tesla's predecessors and contemporaries from Slovene lands.

Franz Hočevar was the most successful scientist from White Carniola. His main works belonged to mathematics, but he also published several physics papers about electrical experiments using the modern vacuum technique. He used innovative techniques in his pedagogical achievements and considerably improved vacuum technology of his times with the early use of the Geissler's vacuum tubes in the electrophorus.

The Slovene female physicists recently entered research of vacuum techniques. In the year of physics, the contributions of Slovene female researchers in vacuum techniques were described. The achievements of Hertha Ayrton in arc light research were mentioned. After historical introduction we described the success of Serafina Dežman († 1896) at her measurements of pressures with barometers and other experimental techniques in Ljubljana. She was trained by her brother Karel Dežman as his collaborator and after his death she continued the experiments on her own. She could be considered the first important modern Slovene female experimental physicists, working in the field of barometer techniques, and using sophisticated vacuum barometers already 150 years ago.

Marija Wirgler was the first Slovenian female professor of physics, and Ángela Piskernik was the very first Slovenian girl with Ph.D. in natural philosophy. In their time the University of Ljubljana was established with better opportunities for Slovene female researchers. Emilija Mlakar, married Branz as the very first woman took over a mathematical sciences degree at the University of Ljubljana in 1928.

After the Second Word War many Slovene women entered the field of physics research with the use of vacuum techniques. One of the first was Snegulka Detoni, famous for her work on vibration spectrums. After her diploma and dissertation at Ljubljana University Bibiana Dobovišek, married Čujec, began her pioneering work (1955-1966) on the new betatron at Nuclear Institute, today Institute Jožef Stefan in Ljubljana. Danica Burg-Hanžel, as the very first Ljubljana female engineer of physics, became the leading researcher of the Mössbauer's spectroscopy.

Peterlin contributed to the development of vacuum technique. Many Peterlin's family members published about science and vacuum, among them his wife's grandfather Maks Samec the elder.

As a young assistant at the University of Ljubljana Peterlin used early vacuum techniques for the measurement of X-rays scattering on liquids. His wartime work in Dresden brought him increasingly in contact with macromolecules which became his main area of research. During his decade-long leadership of Ljubljana Physics Institute, in the meantime named after Jožef Stefan, Peterlin introduced modern vacuum techniques in nuclear and solid-state physics, thereby providing a solid foundation for our present days' achievements. Within the quarter century at the University of Ljubljana (1933-August 31, 1960), first as assistant and later as a full professor, Peterlin educated the whole post-war generation of Slovenian scientists, physicists as well as mathematicians. For over a decade he did not only taught experimental physics but also designed and supervised laboratory experiments for students using vacuum techniques.

Accelerators and thin films were at the shadow of (Yugo)Slovenian A-Bomb. Peterlin's managing of Jožef Stefan Ljubljana Institute in 1949-1959 could be comparable with J. Robert Oppenheimer's (* 1904 New York; † 1967 Princeton New Jersey) work in 1943-1954. Oppenheimer had General Groves and Senator McCarthy, but Peterlin eventually had to deal with Yugoslavian Communist authorities. In his pursuit to grant more money for his macromolecular research Peterlin had to accept the opportunity to build the nuclear institute at Ljubljana, but after a decade of hard work he faced a similar destiny as Oppenheimer did five years earlier. During his Ljubljana work Peterlin was able to develop the accelerator and thin films research. He enabled Slovenian modern achievements at that fields.

Nanotubes paved their own way. The contemporary Ljubljana discovery of the special sort of mono-crystal MoS_2 nanotubes connected the older traditions of the Molybdenum and Tungsten manufacturing, and most of all it continued Hacquet's observation of the tube-like crystal structures.

Hacquet's frostwork hard rime research was a part of the numerous small advancements in science published from somewhat personal letters that connected the central European researchers to a kind of old world web. Hacquet performed his research simply on the window of his study-room. He measured with a barometer, thermometer, and microscope. He pioneered the use of microscope in crystallography by combining his crystallographic experiences with many years of his floristic observations. His result was quite modern description of the icy ferns' crystal growth. Hacquet's crystallography influenced later purchases of scientific instruments in Ljubljana and modern research of crystals that eventually lead to the discovery of modern inorganic nanotubes in Ljubljana.

The Ljubljanese invention of dr. Remškar went through their hardest times up to the limelight, *Per Astera Ad Astra*. The support from Switzerland should be considered decisive as Swiss traditionally for a century and more supported the female scientists from Slavic countries. The success of the Ljubljanese researchers could be compared with the achievements of Japanese and Israeli researches in the field of nanotubes.

The structure of MoS_2 nanotubes is described with a possible explanation of the novelty they bring into the new geometrical approach to chemistry. We tried to predict the future development of that promising technology.
For over dozen years Osredkar headed the Jožef Stefan Institute in the crucial era for the development of Ljubljana technology of thin films, which Boris Navinšek began to develop with his first »table« ionic bombardment instrument during the early years of Osredkar's directorship. Osredkar got his Masters' degree in New York, and after his Ljubljana dissertation held a position within Viennese International Atomic Energy Agency. Through his connections with foreign experts Osredkar got excellent overview on contemporary vacuum techniques and possibilities for their use in Ljubljana. We discussed early Osredkar's steps from the pre-war electro-technique into post-war physics which enabled previously unthinkable development of vacuum techniques in Slovenia.

On occasion of the premature death of the Academician Robert Blinc his contributions for the development of the modern vacuum techniques in Slovenia are put in the limelight. As the head of condensed matter physics department of Institute Jožef Stefan professor Blinc employed the leading experts for vacuum technology and in that way contributed to its development.

Blinc employed his vacuum technology for food industries especially by NMR detecting the content of water in stored seeds of sunflowers. The storing of food is essential for the history of nutrition. The vacuum can remove the oxygen needed for the development of beings harmful for food. We protect the contents of flasks from external temperature effects or eliminate water from the frozen food. While the first deoxidation method was invented soon after the invention of the vacuum pump three and a half centuries ago, a thermos flask helps to keep the food barely during a century. The lyophilizing drying was very well-developed during the time of troubles of the Second World War as revitalization of Native American designs.

The vacuum protection was used for the first time for the storage of grapes and the obtained wine. Two and a half centuries later, thermos flask began to be used quite differently for the storage of brewed milk. The grapes and milk were first successfully stored by Germans, grapes, of course, with substantial assistance of Žužemberk-born prince Auersperg. The natives of Suha Krajina including Žužemberk in Carniola have always been first-class experts for grapes. The well-to-do Englishman Boyle stored wine in a vacuum recipient for the first time. As expected, he rejected the local products and used the French noble drops of wine. Or he even imported some Slovenian drinks?

A century ago, Ernst Mach passed away. His parents and sisters managed a farm under Gorjanci 25 km southeast of the native place of first prince Johan Weikhard Auersperg. E. Mach was a student of Andreas baron Ettingshausen and designed the pioneering use of photography for ultrasonic projectiles. Peter Salcher, the student of K. Robida, S. Šubic and A. Toepler, made the measurements based on Mach's ideas. Robida was one of pioneers of cathode sputtering. Ettingshausen and Toepler developed the modern scientific photography. Both achievements are today used to make ultra-speed photographs of thin films sputtering with the magnetrons.

The vacuum is not only a tool for storage, but already for half of a century is also a medium for cooking. Rumford in Munich was the first European to announce a long-term cooking at low temperatures already used for a long time in elevated posts of Native Americans and Indic inventors. Although Rumford was an American-Englishman in the Bavarian service, the modern-day cooking processes in a vacuum at temperatures below the boiling point is popularly known with the French name *Sous-vide* maybe also because Rumford spent his last Parisian era as the unhappy estranged husband of Lavoisier's widow.

Many of the most important Slovenian and Croatian vacuum researchers were at home in the Upper Kolpa Region where 22nd Croatian-Slovenian meeting on vacuum techniques took place in 2015. Among them are Janez Kovač (Srobotnik), the first writer of the post-war Slovenian physics textbook Franc Kvaternik (Osilnica * 1919; † 1981), Matjaž Panjan and his uncle Peter Panjan (Sodevci). The present writer from nearby Fara was commissioned to describe their achievements. An interesting regional fact is explained by the extraordinary technical heritage of the population of Upper Kolpa Regions, beginning with the local medieval mills. In 1651 forges processing of Carniola iron ore was set up by Count Peter Zrinski in Čabar. The products were exported by the harbor of Bakar. The 19th century immigrants from Slovenian side Aleksander Vilhar (* 16/2/1814, Planina 74 by Rakek; † 1868) and Wilhelm Vilhar, the brothers of famous poet F. Levstik's friend Miroslav Vilhar (Wilicher, * 1818 Zgornja Planina 74 by Rakek; † 1871), produced one of the first Croatian saw steam powered using vacuum techniques in Milanov vrh between Čabar and Prezid by Croatian side of Upper Kolpa valley in the year 1847/48. Aleksander's grandson Dušan Vilhar (* 1867; † 1913), friend and collaborator of Croatian national hero Fran Supilo, designed a steam sawmill based on more modern vacuum techniques in nearby Gerovo. The physicist Franc Kvaternik examined it there. His home was just few miles on the west across the Kolpa River. Considering the UNESCO year dedicated to light and related technologies, modern optics-related designs of vacuum researchers descending from the banks of the Upper Kolpa in the field of optoelectronics, luminescent materials and optical properties of thin films were put in the limelight.

Zelli's tutoring of Marmont, Vilhar's enterprises in Gorski Kotar and the work of the Orthodox Nikola Tesla from Croatian Vojna Krajina in Maribor (1878–1879) were the earliest collaborations among the Croatian-Slovenian experts in vacuum technologies, and many more followed including the modern 22nd Croatian-Slovenian meeting on vacuum techniques in Osilnica. Despite the March 1879 Tesla's prosecution from Maribor to Gospić, Tesla transferred the vacuum techniques of his Karlovac (Rakovac) professor the Zagreb academician Martin Sekulić to Maribor. In Maribor Tesla tried for the first time to imagine Sekulić' ingenious laboratory experiments with cathode ray tubes to industrial applications on greater scale. Tesla Coil, especially the one in Wardenclyffe tower, was the largescale application of Sekulić's school laboratory Rakovac by Karlovac designs. It was expanded in Tesla's Maribor dreams to the scale never imagined before to bring electric light and energies to everybody. The due respect is paid to Tesla's Maribor whereabouts which developed somewhat clumsy youngster Tesla into a greatest of all men.

The development of vacuum technologies based on Toynbee-Kuhn-Južnič's model in a five-step scheme is illustrated. It focuses on three major inventions: vacuum mercury barometer, air pump, and

Geissler's discharges leading to cathode ray tube. Especially the last one turns out to be one of the most influential inventions of all times. For conclusion, the projection of future development of vacuum techniques is given under the guidance of new incoming research powers. The future contributions of non-white researchers of vacuum technologies will join recently advanced vacuum techniques researchers from middle-class, rural, and female environments. On the UNESCO's year dedicated to light and involved technologies a graph is published showing the development of physical optics focused on vacuum technologies.

After three decades of writing for DVTS journal Vakuumist with the first hundred published papers and three monographs published for DVTS, it is time to look across the shoulder on the accomplished path and achieved results. The experiences will provide good signposts for younger Slovenes who wish to become vacuum-related scientists.

Our European academic ancestors developed or borrowed from Easterners most of the basic experimental tools of modern physics during few decades torn apart with religious wars of the first half of 17^{th} century. In a row the European scientists began to use the new microscopes, telescopes, thermometers, movable Chinese clocks, balances, barometers, and also the vacuum pumps as the most expensive and most revolutionary of them all. After the measurements with those new-invented tools, some of the fundamental variables of physics proved to be limited in one directions, the others were restricted in both directions by their smallness and greatness, and the rest do not have the real limits at all. The vacuum technologies are among the first or inside the second group because the perfect vacuum proved to be unreachable in the form of total emptiness while the greatest pressures-densities do not seem to have any proved limits eventually depending of currently prevailing theory of astrophysics or particle physics or both. The centuries of European problems with nothing, vacuum, and similar limits were the products of uncritical European borrowing of those ideas from the very differently shaped Indian sciences during the last millennia. The Europeans used the novelties for the developments of their newly shaped technologies which brought profits. They were willing to leave to Indian literati the deeper theoretical knowledge which did not offer any immediate surplus of western money. For that reasons the modern Western vacuum technologies just slowly influence the everyday thinking and debates among the ordinarily people who in their own way try to influence the decisions about the support and financing of scientific research. The common Europeans were never systematically trained to understand anything fundamental about vacuum in contrast to their India native peers. The lack of understanding of basic theoretical questions as is "what is missing in a vacuum" in that way obstacles the desired greater financial supports for more widely understandable vacuum technologies which could please narrowminded financial elites. The modern Copenhagen Manhattan interpretation of quantum mechanics which does not try to be understandable even to the experts, was probably one of the reasons why the bulk of the research money recently passed from the research in physics to the research of genome which with its twenty-three chromosomes offers much more reasonable visions even to the uneducated lay people. The transfer of research money brought no fatal blows to the developments of the vacuum technologies which retained their basic positions in the fundamental research of physics, as well as in nanotechnological experiments on genomes.

Franjevački samostan Duha Svetoga u Fojnici (Fojnica OFM Monastery of Silver Province of Bosnia (Provincia OFM Exaltationis S. Crucis - Bosna Argentina, Bosna Srebrena)):

Anonymous. 1739. Latin anti-Cartesian and anti-Lutheran work on the possible movement in the vacuum, noted under the goose pen of the domestic father with a dated proprietary entry on 9 December 1739, manuscript no. 44.

FSKA – Books and manuscripts in the library of Franciscan Monastery of Kamnik.

FSLJ = The reference codes of Books & manuscripts kept at Library Franciscan monastery, Ljubljana, also noted by the letter F:

Anonymous. 1744/45. *Philosophia Aristotelica Joannis Duns Scoti Doctoris subtilis, solidissimis ac invertibilibus principiis ac firmissimmis fundamentalis insistens. Dialectica Institutiones et Logica; Philosophia naturalis*. Manuscript (FSLJ-10 g 41, FSLJ-10 g 42).

Anonymous. 175?. *Incipit Philosophia naturalis, seu Physica / Liber Quartus Physicorum / Generatione et corruptione / Mundo et coelo / Liber Sextus Physicorum de Continuo*. Manuscript (FSLJ-16 g 115).

Anonymous. 175? (Before the discovery of Uranus in 1781). *Incipit Philosophia naturalis, seu Physica / ad Mentem Mariani Doctoris Joannis Duns Scoti*. Manuscriptum (FSLJ-16 h 115, unpaginated, its last folio lost, about 650 pages of 20 x 16 cm; kept in the cover of the other today not shelved or catalogued book FSLJ-16 h 20 and with ex libris: "Cella XLIX / Procuratus Pro Conventu Labacensis / Anno 1777". Note with a pencil: "Duplicate".

Anonymous. 1768. *Institutiones philosophiae … In Dei nomine tractatus ad universam physicam sive scientiam naturalem* (Bind to the dialectics dated in the same year). Manuscript of 192 pages with unpaged index of topics on the end (FSLJ-4 b 5 with unapproved reference code noted during WW2 as FSLJ-29 f 29). Resembling but not identical to the manuscript with similar ornaments of 1771 (FSLJ-5 h 34).

Anonymous. 1770-1771. *Tractatus Metaphysicus seu Universalis Philosophiae; Particularis Physica*. Manuscript (FSLJ-5 h 34 (FSLJ-29 f 34)).

Anonymous. 1772?. *(Incipit) Physica generalis*. Manuscript (FSLJ-13 i 68).

Anonymous. 1772? (1772–1774). *(Incipit) Physica generalis*, (FSLJ-13 i 68).

Dinarić, Vigilij (Vigilius, Vigilio Dinarich). 1735. *Inscrit Philosophia naturalis seu physica ad placubus doctoris subtilis Scoti*. Manuscript dated on 27 March 1735 and 20 June 1735. Bind to: *Inscrit Philosophia naturalis, de generatione et corruptione* dated on 16 July 1735. (FSLJ-13 c 81).

Franciscans of Ljubljana diary. noted in the years 1658/1660 – 1828. *Tyrocinium seraphicum... in duas divisus partes./ Quarum prior noviter idutorum / Posterb veró solemniter Professorum / Seriem continet*, FSLJ with no reference code available. Ljubljana.

Hieber, Castul; (with exam of his student Varingo Garsberger). 11 August 1793/1796. *Theses Philosophicae ex logicae, Metaphysicae et Mathesi pura quas in conventu studis Cambensi (Cham in Bavaria) P.P Franciscanorum publica disputatione* *exponit P. Castulus Huber Philosophiae lector ord. Defendas... P. Varingo Garsberger*, Monastery Cham (*Cambiensi*) in East Bavaria 50 km northeast of Regensburg (FSLJ-1 d 50).

Hieber, Castul. 1797. *Philosophia Corporum seu Physica: Pars I generalis ex variis / Novissimis Autoribus con gesta ai Systemate ordinata pro annis Praelectionibus P. Castuli Hieber* (227 pages)/ *Notiones et Definitiones ex Geometria* (five unfinished separately paginated pages). Monastery Cham (*Cambiensi*) in East Bavaria 50 km northeast of Regensburg (FSLJ-15 b 65).

Markilič, Hieronym. 1755?. *Manuscript P. Hieronymi Markillitsch Franciscani philosophia lectoris / Incipit Philosophia naturalis seu Physica Secundum principia et Doctrinam Mariani Doctoris Subtilis Joannis Duns Scoti* (FSLJ-3 c 71). Unpaged 862 pages of A4/2 format. On 6 November 1938 I. Medved noted its undated continuation as Dialectica manuscriptum, FSLJ-3 c 70-72.

Markilič, Hieronym. 1755?. *Manuscript P. Hieronymi Markillitsch Franciscani philosophia lectoris / Incipit Tractatus in libros Aristotelis de generatione et corruptione* (FSLJ-3 c 72). Unpaged 395 pages of A4/2 format.

Markilič, Hieronym. 1769-1774. *Scripta Theologia Dogmatica* (FSLJ-12 c 4-7). On p. 4: 306/307 a sub-title: Dissertatio secunda veritatis catholica sanctissimo eucharisia sacramento in qua contra neotericos, et prasertim contra nostrum P. Fortunatum a Brixia (et alios recentiores) asseritur, et defenditur... aliquid teala physicum a parte rei existens extra sensus..., Ljubljana 1769, FSLJ-12 c 7.

Medved, I. 1938. *Manuscripta conventus pp. Franciscanorum Ljubljanensis*. Manuscript dated on 6 November 1938, leaves bind together containing description of manuscripts held in FSLJ, 12,8 x 7,6 cm (FSLJ with no reference code available). In 2015 updated by Miran Špelič and Jože Škofljanec.

Pfeiffer, Gotfrid (Godefridi). 1735/1736. *Cursus philosophicus praelectus iuxta mentem Doctoris Subtilis studiosae Juventuti* (iuventuti) *á Patre Godefridi Pfeiffer Philosophia Lectore actuali*. Only the second part (tomus 2dus) of the manuscript was preserved entitled *Complectens Scientiam Naturalem seu Physicam universam*, Sveta Gora above Gorizia (Holly Mountain) (FSLJ-29 f 24).

Ruessenstein, Alexis baron. 1694. *Drittes Buch / von denen zusammen getragenen Schriften des Herren Alexij Baron von Ruessenstein* (The reference code of Ljubljana Franciscans' Library FSLJ-29 F 54), (1)694. Copy on 234 pages. *Alexis baron Ruessenstein, Drittes Buech / von denen zusamm getragenen Schriften des Herren Alexis Baron von Ruessenstein* (von Salzburg) (FSLJ-29 F 56), (1)694. Original on 513 pages.

Škerpin, Žiga. 1714, 1718. *Commentaria in Aristotelis Stagyritae octo libros Physicorum*. Manuscript. The first book (448 pages, 1714, FSLJ-6 d 4), and the second book (431 pages, Trsat, 1718, FSLJ-6 d 57).

Špelič, Miran OFMobs. 2010. *Nekrologij province sv. Križa (Obituaries of Province of St. Cross)*. Typescript at FSLJ.

Zinsmeister, Theophilus, *Tractatus ex Physica*. Manuscript, 1799, FSLJ-1 d 48.

Zinsmeister, Theophilus, Ad usum P. Theophili Zinsmeister/ *(Prolegomena) Theologia dogmatica*, 204 pages, on the beginning of unbind added 4 pages of Narratio in somewhat bigger format. Manuscript, 1800?, FSLJ-4 c 70.

FSMA = archive of Franciscan monastery in Makarska (Croatia, Arhiv franjevačkog samostana u Makarskoj):

Dorotić, Andrija. About 1795. Physicae generalis libri quattour (part of: *Cosmologia; Physicae generalis continuatio*; *Physica particularis, de mundo*; *Institutiones physicae*; *Exaratio universae philosophiae. T. H*; *Physica particularis*; *Physica generalis et particularis*). Manuscript produced in Rome where he taught philosophy and Natural History.

FSNM = The reference codes of Books & manuscripts in Franciscan library of Novo mesto.

Toš, Tarzicij. 1942-1944. Standard Subject

Ferlach (Borovlje) Sterbebuch = Matricula of Ferlach (Borovlje) Roman Catholic Parish inside the Diocese (Diözese) Gurk (Krka) (4^{th} book of funerals).

KLEKL = The reference codes of Books at Klekl's library (Kleklova knjižnica) in Črenšovci.

Koper (Capodistria):

City Archive Inventory Koper. 1850-1871. Inventario del gabinetto di Fisica disposto nell'ordino cronologico degli acquisti. City Archive Koper, X R. Ginnasio superiore di Capodistria (Higher Grammar School (gymnasium) in Koper), reference code 10, 3.

Library of the Italian Language Grammar School (gymnasium) in Koper, reference codes of books.

Kremsmünster Sternwarte, Stift Kremsmünster, A-4550 Kremsmünster, Austria, Direktions-Archiv der Sternwarte Kremsmünster, Manuscripts.

Koller, Marian, Vorlesungen „aus der gesamten Physik in der 8^{ten} Classe des Lyzeum" an der philosophischen Lehranstalt zu Kremsmünster (1826-1839, Lectures about physics read at philosophical studies in Kremsmünster) von P. Marian Koller. Koller-Manuskripte, 15a (I. Abteilung: Chemie, Mechanik, Akustik on 694 pages together with later added title page) and 15b (II. Abteilung: Optik, Magnetismus, Elektrizität, on 672 pages together with later added title page).

Marian Koller's manuscript notes taken from J. Stefan lectures at Viennese University (Vorlesungen von Prof. Dr. Josef Stefan):
a) „Theorie der Elasticität fester Körper (Theory of elasticity of solids)", taught in winter semester 1861/62, 36 folios (= 144 pages), Manuscript no. 18.
b) "Über die Theorie der Wärme (On theory of Heat)", lectured during winter semester 1862/63 with L. Boltzmann also among the students, 35 folios (= 140 pages), Manuscript no. 31.
c) "Über Elektrodynamik und Theorie der Induction (About electrodynamics and the theory of induction)", taught in summer semester 1862/63, 26 folios (= 104 pages), Manuscript no. 32.
d) „Über die Theorie des Lichtes (About the Theory of Light)", taught in winter semester 1863/64, 30 folios (= 120 pages), Manuscript no. 26.
e) „Über Interferenz, Beugung, Polarisation (On Interference, Diffraction, Polarization)", taught in summer semester 1863/64, 10 folios (= 40 pages, Manuscript no. 27) (Manuscript, Directions-Archive of the Observatory (Sternwarte) Kremsmünster).

KKKRS = The reference codes of books at library of Krško Capuchins.

KSMA - Books of library of former monastery of Capuchins in Maribor dissolved in 1784.

KSSKL = The reference codes of books at library of Škofja Loka Capuchins (Kapucinski Samostan Škofja Loka):

Redeskini, Ambrozij. 1778. *P. Ambrosii Redescini de Haidovio O.C. Institutiones universae Philosophia Recentioris, usibus discipulorum accomodatae*. Zagrebiae. Before WW2 and in 1960 in *KSSKL*.

KSVK = Capuchin Monastery Vipavski križ (Kapucinski Samostan Vipavski križ):

Anonymous. 1749. *Index Cathalogi bibliothecae ad facilius repriendos libros in eo contentos, compositi Anno 1749*. Vipavski križ. *KSVK*.

Maribor:

City study library (Mestna študijska knjižnica) Maribor.

University of Maribor library (UKM).

Mayr's sales catalogue = Mayr's bookkeeping offer to Ljubljana residents in 1678 published by Janez Krstnik (Joannis Baptistae). 1678. *Catalogus Librorum qui Nundinis Labacensibus Autumnalibus in Officina Libraria Joannis Baptistae Mayr*. Venales prostant. Labaci (Ljubljana): Mayr.

MINSPT = books of Library at Minorite monastery of St. Peter and Paul in Ptuj (Friars Minor Conventual, OFMConv, Minoritski samostan sv. Petra in Pavla, Ptuj).

NMLJ = The reference codes of books and manuscripts in Library of National Museum (Narodni Muzej), Ljubljana.

ER = Book numbers of Mathematical and Physics part of Erberg's library of Dol by Ljubljana, today mostly in NMLJ after Karl Dežman's acquisitions. Also catalogued in SI_AS 730 GrA. Sorted by topics including physics, mathematics.

NŠALj = Archbishopric (Archdiocese) archive in Ljubljana:

T (TE) = Terpin's catalogue of Gornji Grad (Upper Castle) library = Terpin, Filip. 1655. *Terpin Philipus. Studi. Theolog. Baccalaureus Vic. Gen. Lab. Constitutiones, et Index librorum et authorum bibliothecae Oberburgensis excellentissimi et reverendissimi principis episcopi Labacensis conscriptus per reverendum dominum Philippum Terpin vicarium generalem anno 1655* (signed on 14 October 1655 in Gornji Grad) (*NŠALj, Bishopric archive (Ljubljana)*. Cathedral Chapter archive (Kapiteljski Arhiv), Fascicle 96/14; photocopy in NUK-manuscript department 39/83).

NUK = The reference codes of books and manuscripts at National & university library (Signature Narodne in univerzitetne knjižnice) in Ljubljana, stored in Collection of manuscripts and rare prints (Rokopisna zbirka in zbirka redkih tiskov):

Baeda Venerabilis (Bede, Beda). 12th Century. *Commentarius in Matheum (Explanatio super Matheum)*, *Expositio in Libros regum* and *Varia*. NUK Ms. 18

Codelli, Baron Anton von Fahnenfeld, Legacy inventory, NUK, manuscript section, Reference code: Ms. 1397 (cited as: Codelli, NUK): III (155); 141, Nr. 3458, Nr. 3408 III (Codelli's TV patents).

Codelli, baroness Rozalija (Rosalia). *Lebenserinnerungen*. 710 pages of autobiographical manuscripts of Anton Codelli's mother Rosalia Taufferer. NUK, manuscript section, Reference code: Ms. 1397.

Čop-Kalister's catalogue of Ljubljana Lyceum books in NUK denoted by letter Č. In 1826-1831 catalogued by Kalister and in 1832-1835 by Čop, with later supplements of librarians.

J-… = Library numbers in the book *Catalog of former Jesuits' books of Ljubljana* listed by Janez Wanggo and Joseph Dollhopff as: *Verzeichnis der vom Feuer geretteten Bücher des Gewesten Collegii S.J.* original (first transcript) with a sub-title: "*Specification deren Bey der gewesten Feuersbrunst and den Leybach. Collegio Geretteten Bücher*" (NUK, manuscript department, manuscript 30/83). Second transcript, dated 1 March 1775: "*Specification deren Büchern, welche zum Theil in dem Gewesten Collegio zu Laybach in einem Kasten Verwahrt Gewesen, und zum Theil durch Studentes nach und nach zusammengetragen*". For the books noted after number 605, the new title was issued: "*Specification deren Büchern, welche nach der letzten Publications Eingegangen Seynd*" (NUK, manuscript department, manuscript 31/83). Preserved books were numbered, numbers are the same as those written on the outer cover of books in today's NUK.

Jesuits. *Historia Annua Collegii Labacensis anni 1722-1773*. *NUK*. 5/53; Annua Collegii Labacensis 1722-1773. *NUK*. Ms 1544 (former owner was FSLJ after 1773).

Peer, Karel (Karl), *Bücherverzeichniß aus dem Peerischen Verlaß* (NUK-manuscript with inventory number 32/83).

ST = anonymous. 1784. *Algemeinen B. k.k. Bibl. Sittich = Catalogue Alphabetisches Verzeichnis der kaiser. königl. Bibliotheck zu Sittich (Stična*

Cistercian Monastic Library). NUK Ms. 22/83 (copy); Ms. 21/83.

W - Wilde, Franz Ksaver (Franc). 1803. *Catalogi Librorum Bibliothecae Publicae Lycei Labacensis in Ducatu Carnioliae. Alphabethisches literarisches Verzeichnis der in der Laybacher Lycealbibliothek vorhandenen Werke* (Library Numbers and List of the Ljubljana Lyceum Library) (*NUK*. Manuscript division (Handwriting department)). Also, somewhat later Supplementum.

Zelli, Rafael. 1811. *Registre de correspondence*. VII *NUK*, manuscript division.

Josef Schober's catalogue of Zois' books in Ljubljana noted from 1783 up to 1797, and Jakob Zupan's (1785-1852) catalogues produced in 1810-1816 (NUK, Ms. 368; Svoljšak, Vidmar, 2019, 21, 97, 149).

Z = Zois, Žiga. 181?. Bibliothecae Sigismundi Liberi Baronis de Zois – Catalogus. *NUK*, Ms. 667. Selling catalogue authored by Matija Kalister and the bookseller Viljem Henrik Korn finished on 4 August 1821 with 4109 volumes (NUK-Ms 667; Kidrič, 1939, 9; Svoljšak, Vidmar, 2019, 11, 99).

Zois, Žiga. *Verzeichniss der schätzbaren literarischen werke, die der Hoch und Wohlgeborne freyherr Baron Sigismund Zois der diesortigen Lyceal-Bibliothek in den Jahren 1808 und 1815 als ein Geschenk verehret hat* (NUK-manuscript with inventory number 43/83 (the reference code Ms. 1950), earlier Zois' donations to Lyceum Library of Ljubljana inventoried by numbers 40/83, 41/83, 42/83; Svoljšak, Vidmar, 2019, 11).

Oklahoma University, Bizzell Library History of Science Collections:

Paolitto, Valentino (former owner). After 1657. *17th-century Sphaera: In triplicem spheram, terrestrem, aeream, et coelestem breves adnotates*. No note of date or author. Manuscript once owned by Valentino Paolitto now kept in University of Oklahoma, Bizzell Library History of Science Collections.

Zacco (Zacchi), Augusto. 1680/1681. *Com(m)entaria In Primam Partem Philosophiae Naturalis Aristotelis De phisico auditu Iuxta Mentem Angelici Divi Thomae Aquinatis Domini Augusti Zacchi Patritii Veneti* (August 1680-November 1681). Manuscript kept in Oklahoma University, Bizzell Library History of Science Collections.

Martin, Benjamin. 1766. *A description of the nature, construction and use of the Torricellian, or simple barometer with a scale of rectification* ... London: printed for author (Žiga Zois's book now NUK-8540). Bind to seven Martin's works of similar topics (Žiga Zois's books now NUK-8539-8546) including: 1766. *The description and use of a new, portable, table air-pump and condensing engine: with a select variety of capital experiments, which together with the different parts of the apparatus and glasses, are illustrated by upwards of forty copper-plate figures*. London: printed for author as self-publishing (Žiga Zois's book valuated as (1:00) now NUK-8539). 1765. *Optical essays: Containing, I. A practical description of the several sorts of single, solar, and compound microscops; with their apparatus, and latest improvments. II. The nature of vision in insects demonstrated by microscopic observations. III. A catalogue of all principal microscopic objects. IV. The use of the reflecting telescope as an universal perspective for viewing every sort of object in the greatest perfection. V. The manner of computing the magnifying power in single and double microscopes. VI. A new method of applying a micrometer to take the dimension: of small objects. VII. An illustration of the whole in a great variety of figures on a large copper-plate,* London: printed for author (NUK-8542); 1771. *The description and use of an orrery of a new construction Representing in the various Parts of its Machinery all the Motions and Phoenomena of the Planetary System ; To which is subjoin'd a mathematical theory For calculating the Wheel-Work to the greatest Degree of Exactness*. London: printed for author (Žiga Zois's book now NUK-8544); 1772. *Thermometrum magnum: or, Grand standard thermometer* ... London: printed for author (Žiga Zois's book now NUK- GS I 8541); 1766. *The new art of surveying by the goniometer; containing, I.A new method of measuring angles by this new instrument ... II. The description and use of a new protractor ... III. The rationale of reducing any* *multangular figure to a plain triangle ... IV The principles of levelling ... The whole illustrated by a great variety of copper-plate figures.* London: printed for author.

Martin, Benjamin. 1759. *New Elements of Optics or the Theory of the Aberrations, Dissipation and Colours of Light; of the General and Specific Refractive Powers and Densities of Mediums; the Properties of Single and Compound Lenses and the Nature, Construction and use of Refracting and Reflecting Telescopes and Microscopes of every sort hitherto published.* London: printed for author (Žiga Zois's book now NUK-GS I 7948). Translation: 1781. *Elementi delle scienze e delle arti letterarie di Beniamino Martin. Traduzione dall'inglese in francese, e dal francese in italiano*. Bassano: Remondini di Venezia, three volumes (POMPI).

Martin, Benjamin. 1758. *New principles of geography and navigation: in two parts. Part I. containing the theory of the true figure and dimensions of the earth, deduced from actual mensuration, and applied to a just construction of maps and charts for land and sea use ... Part II. containing a table of meridional parts ...* London (Žiga Zois's book now NUK-GS IV 10579).

Martin, Benjamin. 1735. *The Philosophical Grammar. Part I. Somatology... II. Cosmology... III. Aerology... IV. Geology...* London: John Noon. Reprints: 1738. London: John Noon; 1748. London: John Noon; 1753. London: John Noon; 1755. 5th Edition. London: John Noon; Italian translations 1750. Venezia: Remondini; 1753 Venezia: Remondini; 1760 Venezia: Remondini; 1769. *Gramatica della scienze filosofische, o Breve analisi della filosofia moderna appoggiarta alle sperienze... Quarta ed.veneta : novellamente illustrata e con somma diligenza ricorretta…tradotta dall'inglese in francese e dal francese in italiano*. Bassano/Venezia: Remondini (NMLJ-6355 probably as former Erberg's book). Dutch translations: 1737. *Filozoofische Onderwijzer: of algemeene schets der hendendaagsche ondervindelijke natuurkunde*. 37.4 Index of Main Patents Noted

Aitken, *Russel (of Falkirch, England)*. 1884. Apparatus for extracting gases from molten metals (The degassing of steam and the pumping of molten steel through a tap into emptied receiver due to the difficulties in removing gas from molten metal). He used a special container with an insulating layer for the refraction of light, and the suction hose was placed on the bottom. The container was immersed in the frying pans during alternating suction and injection of the air. Part of the melt could be sucked into a special container to gradually decompose the solution. Patented in England in March 1882 as No. 1,533, in France on September 29, 1882 as No. 151,315, in Germany by No. 22,170 on October 12, 1882, in Austria-Hungary on February 24, 1883 as No. 35,676 and No. 7,515. US patent US310012A was granted on December 30, 1884.

von Ardenne, Manfred. 1924. The Receiver and Transmitter with cathode ray tube. German Patent.

Arsem, William C. (at GE headquarters in Schenectady). 1904. Electrodeposition, Application filed by Priority to US21809704A on 25 July 1904, Application granted by Publication of US811759A on 6 February 1906.

Arsem, William C. (at GE headquarters in Schenectady). 1904. Electric furnace (having an air-tight chamber, A vacuum resistive metal cleaning agent by evaporating impurities, promoting metallurgical gas reactions, and protecting reactive metals against pollution, a vacuum water-cooled metal degassing vessel, a spiral graphite heater and a graphite screen), US Serial No. 220 449 filled 12 August 1904.

Arsem, William C. (at GE headquarters in Schenectady). 1906. Chemical process (mixing an oxide of tungsten with a dry powdered reducing agent and then heating said mixture in a vacuum by radiant heat to cause reduction of said oxide, various separation metallurgical operations at temperatures above 1500 ° C), Priority to US1906324408A on 2 July 1906, Application filed by Priority to US393227A on 16 September 1907, Application granted by Publication of US979363A on 20 December 1910.

Auwärter, Max. 1939 for Heraeus (after 1946 for Liechtenstein's Balzers). The rhodium vapour deposed mirrors. German Patent in 1939. Similar: Production of metallic surface layers (Rhodium coatings characterized by a surprisingly high reflecting power and an extremely adhesive strength to the basis, extremely uniform surface of rhodium upon the glass which may be further fixed by polishing, partially permeable to light and forms a mirror of considerable reflecting power), Priority to DE478916X on 10 December 1936, Auwärter filled US application on 19 April 1937, Application granted by Publication of US2422609A on 17 June 1947.

Auwärter, Max. 1949. Double layer Transmax (antireflection coating). German Patent in 1949; Similar: Reactive deposition of thin films, British patent 697403 in April 1952.

Auwärter, Max. 1952. Process for the manufacture of thin films, Priority to Austrian patent AT2920002X of 25 June 1952, Auwärter's Balzers application claiming priority by serial no. 362,792 on June 19, 1953, Application granted by Publication of US2920002A on 5 January 1960.

Baird, John Logie. 1927. Improvements in or relating to the Transmission and/or Reproduction of Views, Scenes. or Images by Wires or Wirelessly (stereoscopic wired or wireless transmission of images or motion. One or two spiral lenses and photocells put around the rotating Nipkow-disc). British patent no. 266,564, applied on September 1, 1925 under no. 21,846/25, completed on July 1, 1926, granted on March 1, 1927.

Baird, John Logie. 1936. A color television (with 120 lines scanned with Nipkow plates in red, green and blue colors), British patent no. 473323 filled on 5 April 1936, 16 March 1937, granted on 11 October 1937.

Balmain, William Henry (of Eversley, Ventnor, Isle of Wight, in the county of Hants, England). November 7, 1877. Self-luminous paint (Painting, Varnishing etc., procedure for production of

Balmain's colour), English patent no. 4,152 on November 7, 1877 (*The Engineer* 1877 July-December: Patent Journal on 7 December 1877, p. 414). Patented in Victoria on December 31, 1879 by No, 2,766; in Italy on December 31, 1880; in Belgium January 3, 1881, No. 53,483; in Tasmania March 21, 1881, No. 192; in New Zealand April 28, 1881, No. 523; in Spain May 21, 1881, No. 1,455; in Sweden June 18, 1881; in New South Wales June 25, 1881, No. 947; in Queensland July 12,1881, No. 354; in Portugal July 21, 1881, No. 688; in Austria December 7, 1881, No. 33,137. On 26 September 1882 Application granted by Publication of US264918A (by Harriet Fox, the executrix of deceased Balmain).

Bardeen, John; Brattain, Walter Houser (both for Nokia Bell Labs). 1948. Three-electrode circuit element utilizing semiconductive materials (Transistor). Priority to US11168A on 26 February 1948, US Application filed on 17 June 1948, Application granted by Publication of US2524035A on 10 March 1950.

Bell, Alexander Graham (of Washington, District of Columbia); Tainter, Charles Symner (of Watertown, county of Middlesex, State of Massachusetts). 1880. Photo phone-transmitter (Telephone, selenium in photophone), United States Letters Patent filed on August 25, 1880 for apparatus transmitting sound or reproducing it at a distant point by the agency of rays from the sun, application for Photo phone-transmitter filled in September 1880, Application granted-issued by Publication of US235496A on 14 December 1880. Bell's speech before the American Association for the Advancement of Science in Boston on August 27, 1880.

Bell, Alexander Graham; Tainter, Charles Symner. 1880. Selenium Cell, US Patent filed in September 1880, Application granted-issued by Publication of US235497A on 14 December 1880.

Bessemer, Henry. 1855. His first converter (converting steel in crucibles), British patent no. 2321 filled on October 17, 1855. Corresponding with: The conversion of molten crude iron ... into steel or malleable iron, without the use of fuel, applied by US patents 16082 dated 11 November 1856, and 16083, dated 18 November 1856. William Kelly from the Suwanee Iron Works, Eddyville, Kentucky with the help of his Chinese metallurgy experts achieved a similar US patent no. 17,628 in 1857.

Bessemer, Henry (of London). 1865. The use of models in an empty space into which the liquid steel or iron was applied using atmospheric pressure for the "extraction of iron and steel without burning materials". British patent on 27 July 1865. Improvement in machinery for the manufacture of iron and steel, Application granted by Publication of US49055A on 25 July 1865.

Bethe, Hans Albrecht (of Santa Fe, New Mexico, for United States of America as represented by Secretary of War). 1945. Directional coupler, USA patent 2519734 applied by Priority to US590047A on 24 April 1945, Application granted by Publication of US2519734A on 22 August 1950. Similar Bethe's inventions associated with a hydrogen bomb patented in US in 1949.

Betterton, Jesse Oatman. 1923. Recovering Metal (by permanently attached emptied receiver in the melting furnace), Serial No. 648,194 patent application filed by priority to US64819523 on June 28, 1923, application granted by publication of US1605641A on November 12, 1923.

Betterton, Jesse Oatman of Omaha, Nebraska (& Philips, Albert J., & Metuchen, N. J.), assignor to American Smelting and Refining Company, New York, a corporation of New Jersey. 1936. Vacuum treatment of metals. USA patent no. 2,054,922 on September 22, 1936 and no. 2,140,607 on September 22, 1936.

Blackwell, Otto Bernard (from Plandome northeast of Queen in New York city); Herman, Joseph from New York as assigners to American telephone and telegraph company (ATT). 1925. Method and Apparatus for Television (Spiral scanning), Applied for US patent no US1624918A on May 7, 1925, granted-published on 19 April 1927.

Booth, Hubert Cecil. 1901. Improvements relating to the extraction of dust from carpets and other materials (Motorized vacuum cleaner). Noted on 18 February 1901, Application filed on August 30, 1901 with priority to GB190117433T, application granted by Publication of GB190117433A on 17 July 1902.

Bose, Jagadish Chandra (Jagadis Chunder); Bull Chapman, Sara. 1901. Detector for electrical disturbances (first crystal detector of microwaves), US Application filed on September 30, 1901 by Serial No. 77.028 with priority to US7702801A, Application granted by Publication of US755840A on March 29, 1904.

Bourdon, Eugène. 1849. Improved pressure gauge without mercury (Aneroid metallic tube pressure gauge). Patent applied in Paris on 18 June 1849 granted on 3 August 1853. USA Letters Patent No. 9,163, dated August 3, 1852.

Bower, Robert W. 1966. Field-effect device with insulated gate as basic patent describing the self aligned-gate MOSFET (Self- aligned gates with aluminium gates made at low temperatures), patent filed on May 2, 1966, US3472712 issued on October 14, 1969.

Bronk, Otto von (for Telefunken). 1902. Method and device for making images or objects visible from a distance while temporarily dissolving the images in parallel rows of dots as a color television set whose signals are transmitted in the three primary colors (A mirror drum, a selenium cell and a Geissler tube filter with color filters). German patent DE155528 filled 12 June 1902, granted 22 October 1904.

Burger, Reinhold. 1901. Device for generating X-rays (X-ray cathode ray tube). Patent DE129974 registered on April 19, 1901, published on April 22, 1902.

Burger, Reinhold (for his Berlin company R. Burger & Co. in Germany). 1903. Vessel with double walls enclosing an air-free cavity, Patent DE170057 (DRP no. 170057) registered by the Imperial Patent Office on October 1, 1903, published April 25, 1906. Patents granted in Switzerland, France, Great Britain (United Kingdom), Canada and the USA followed in 1906. The name "Thermos" was protected in 1904 as a trademark under the serial number 71717, registered on August 30, 1904 in the Berliner Imperial Patent Office.

Burns, Laurence (for Sylvania Electric Products Inc. at Salem, Massachusetts). 1944, 1948. Nonactinic fluorescent lamp (GTE Sylvania's first light emitting diode), application filed with Priority to US568737A on 18 December 1944, application granted by publication of US2452518A on 26 October 1948.

Codelli, baron Anton von Fahnenfeld & his brother-in-law Ernst Stadler von Wolfersgruen. 1898. Tube-igniter for explosive-engines (Glowing plugs for internal-combustion engines, electric lighter for motor vehicles), patented as Codelli's first invention. Application filed by priority granted as US1100600A on 31 March 1900, application granted by publication of US653341A on 10 July 1900. Patent sold later in 1900 to the French company Collin Dufresne (Collin-Dufresne et Berigot, Colin) which operated in 1899-1900.

Codelli, baron Anton. 1906. A rotary explosive engine, the predecessor of a half-century later engine of Felix Wankel. Extended by: Codelli, baron Anton (Moste, near Laibach). 1920. Rotary apparatus.

Codelli, baron Anton. 1920. Refrigerator (pipe filled with a liquefied gas and immersed in the liquid to be cooled, the cooling action being produced by the vaporization of the liquefied gas on the pipe being opened by aid of a suitable opener), application filled by priority to US399399A on 27 July 1920, Application Number: US399399A filed on 28 July 1920, noted on 9 November 1920, Application granted by publication of US1467462A on 11 September 1923.

Codelli, baron Anton. 1903. Small heating and cooling apparatus for motorists on long journeys (special container keeping food first frozen and then heated to the desired temperature before use). French patent filled in Nice in France. Extended by: Codelli. 1922. Miniature cooling apparatus (comprising a reservoir filled with a liquefied gas connected to evaporator permitting a gradual escape of the liquefied gas into the evaporator from which the vaporized gas then escapes), application filed by Priority to US531427A on 24 January 1922, Application granted by Publication of US1468876A on 25 September 1923.

Codelli, baron Anton. 1928. Used the term electron for a cathode ray, although he also repeatedly wrote about the cathode ray deflection in his typewritten application for US Patent application on 18 May 1928 and on June 18, 1928. Codelli patented his invention in Germany as the reproduction of images along the spiral. In 1928 and 1931, Codelli patented his stereoscopic electric "far-sighted" vision in all major European centers and in Canada, including: patent application No. 7546 Kingdom of Yugoslavia (Kraljevina Jugoslavija), June 7, 1929 (Copy in SI_AS; NUK, manuscript section, Reference code: Ms. 1397; SI_ZALj) and the Electrical Television, British patent 334,243 on 28 May 1929 & 30 August 1930. Due to the incorrect filling and irregular application on 25 June 1927 and on 29 December 1930, under no. 60718, Codelli's patent in the USA was rejected on 18 August 1932.

Colby, Edward Allen. 1890. Electric furnace for melting metals (foundations of modern vacuum induction melting furnace from an emptied receiver). USA patent. Electric induction furnace of the type set), application granted by publication of Letters Patent US428378A on May 20, 1890

Colby, Edward Allen (Newark, in the county of Essex of New Jersey, for American electric furnace Co. of New York). 1905. Electric Furnaces having endless cores having melting channel only, application filed with priority to US28863005A on 23 November 1905, Application granted by Publication of US859641A on 9 July 1907.

Coolidge (for GE (General Electric Co.) in Cleveland, Ohio). 1909, 1913. Tungsten and method of making the same for use as filaments of incandescent electric lamps and for other purposes (the production of tungsten that could be pulled into thin wires, which did not hang down). 1912-06-19 Priority to US1912704580, 1913-12-30 Application granted with publication of US1082933A.

Daguerre, Louis. 1839. Daguerre's rights were acquired by the French Government in exchange for lifetime pensions while on 19 August 1839, the French Government presented the invention as French gift "free to the world" by complete working instructions published, but in mid-August 1839 Daguerre's agent Miles Berry filled for patent applied to "England, Wales, and the town of Berwick-upon-Tweed, and in all her Majesty's Colonies and Plantations abroad" No. 8194 of 1839 entitled: "A New or Improved Method of Obtaining the Spontaneous Reproduction of all the Images Received in the Focus of the Camera Obscura". Grove subsequently defended the "Daguerreotype" patent in England as a lawyer in court although he had a hard time obtaining Daguerre's plates in England because of that same patent.

Déri, Miksa; Bláthy, Ottó; *Zipernowsky, Károly.* 1886. Induction Coil, application granted by publication of patent US352105A issued on 2 November 1886.

Detela, Andrej; Lampič, Gorazd. 2011. Električni stroj z zmanjšanim držalnim navorom in drhtenjem navora ter nespremenjeno konstanto navora: patent 23406 A. Ljubljana: Urad RS za intelektualno lastnino, 30. december 2011, Patentna prijava P-201000171, 2010-06-09 (Electric machine with reduced holding torque and torque vibration and unchanged torque constant: patent 23406 A. Ljubljana: Office of the Republic of Slovenia for Intellectual Property, 30 Dec. 2011, Patent Application P-201000171, 2010-06-09).

Dieckmann, Max; Glage, Gustav (both in Strasbourg). September 12, 1906. Method of transferring characters and line drawings using the cathode ray tube. German Reich Patent application no. 190102.

Dieckmann, Max; Hell, Rudolf. 1927. Photoelectric imaging tube for television, German Patent No. 450187 issued on 3 October 1927.

Dill, Hans G. (for Hughes's Aircraft Company Newport Beach in California). 1966. Self- aligned gates FET. Tested polycrystalline silicon on May 1, 1966, filed US patent 3,544,3999 on 26 October 1966.

Dufour, Corinne (of Savannah in Georgia). 1900. Electric Carpet Sweeper and Dust Gatherer (motor operating as a suction-fan), Application filed by priority to US2542500A on 31 July 1900, Application granted by publication of US664135A on 18 December 1900.

Dunwoody, Henry Harrison Chase. 1906. Wireless-telegraph system (carborundum (silicid of carbon) detector), patent filed on March 28, 1906, 1906-03-23 Priority to US30767906A, 1906-12-04 Publication of US837616A. Greenleaf Whittier Pickard had served as an expert witness for Dunwoody in patent cases. Crystal detector was patented independently by the Berlin Telefunken in connection with Robert von Lieben in 1906.

Dyson, James (for his UK Dyson technology LTD). 1980, 1983. Handles for hand-supported suction cleaners (G-force Vacuum cleaner). 1980-03-26 Priority to GB8010098, 1981-03-24 Application filed for EU patent, 1981-10-14 Publication of EP0037674A1, 1985-08-07 Application granted by Publication of EP0037674B1. US Patent 4,593,429 in 1986.

Edison, Thomas Alva. 1875, 1885. "Ethereal force". Edison drafted, but did not file, a patent application for an "etheric telegraph (thermionic emission)". For *Means for transmitting signals electrically* he filled US patent 465,971 on 23 May 1885, issued on 29 December 1891.

Edison, Thomas Alva. 1879. Electric Lamp (light bulb with charcoaled cotton thread), according to the legend burned for 40 hours, although laboratory notes testify only 30.5 hours. On 4 November 1879, a patent application was filed, which only had to wait for 84 days for US Patent no. 223,898 on January 27, 1880. The invention was patented in England in February 1879.

Edison, Thomas Alva. 1882. Method of treating carbons for electric lights, Application granted by Publication of US265777A on October 10, 1882.

Edison, Thomas Alva. 1885. Incandescent Electric Lamp (adsorption of mercury and water from a vacuum with special tubes filled with different getters), applications granted by publications of US317631A, US317632A, and US317633A on 12 May 1885.

Edison, Thomas Alva. 1884. Art of plating one material with another (coating with evaporation in vacuum by straight heating with a direct current, which he called "electro vacuum deposition" for arc deposition), application filed January 28, 1884 with Serial No. 118,942, Application granted by Publication of US526147A on 18 September 1894.

Edison, Thomas Alva. 1896, 1907. Fluorescent electric lamp. 1902-04-29 Application filed with priority to US10523302A, 1907-09-10 Publication of US865367A.

Edison, Thomas Alva. 1897, 1899. Tested glowing material from charcoal particles mixed with rare earth oxides, patented in March 1897. Continued as: Filament for incandescent lamps and process of manufacturing same (highly refractory oxides of the rare earths including zirconium, thorium, incorporate therein the isolated particles of carbon by a process of carbonization) 1899-06-06 Application granted by Publication of US626460A.

Edison, Thomas Alva. 1900. Process of coating phonograph-records (Phonograph plates overlay procedure), 1900-06-16 Application filed with priority to US2055500A, Application granted by publication of US713863A on 18 November 1902.

Edison, Thomas Alva. 1903, 1904. Apparatus for vacuously depositing metals (first metallization process with cathode sputtering for production of phonograph plates). 1903-08-01 Application filed with priority to US16793003A, 1904-08-09 Publication of US767216A

Edison, Thomas Alva. 1915. Filament for incandescent electric lamps (Production of a tungsten electrode by pressing tungsten powder in an oxygen-free container evaporating tungsten by discharges between electrodes). 1907-05-31 Application filed by General Electric Co, 1907-05-31 Priority to US37661907A, Publication of US1163329A on 7 December 1915.

Ekström, Alfred. 1910. Arrangement related to photos (recording and receiving the image along the spiral, Anordning for of verforande af bilder pa asstand). Swedish patent no. 32220 filled on 24 January 1910, issued on 3 February 1912.

Farnsworth, Philo Taylor (for Mesne Assignments to Television Laboratories, Inc. of San Francisco,

California, A Corporation of California). 1927. Television System (camera tube). USA Patent 1,773,980 filed on January 7, 1927, granted on August 25, 1930 after a long battle with corporate giants.

Farnsworth, Philo Taylor (Mesne Assignments to Television Laboratories, Inc. of San Francisco, A Corporation of California). 1930. Cathode ray tube providing the display tube the receiver as the television screen, Patent 1,773,981 obtained on August 26, 1930.

Flechsig, Werner. 1938. Cathode ray tube for production of multicoloured images on a fluorescent screen (shadow mask). German Reich patent 736,575 filed July 12, 1938 and issued May 13, 1943.

Fleuss, Henry Albert. 1892. Compression or exhaust pump (Geryke's piston pump sealed with oil equipped with mechanical displacement dampers). German patent granted in 1893. USA application filed in December 1892, letters patent US517337A published on March 27, 1894.

Fleischer, Emil (from Dresden-Altstadt, for Dellwik-Fliescher Wassergas-Gesellschaft of Frankfurt). 1914. The process of manufacturing producer-gas. German patent in 1914. US Application with Serial No. 838,347 filed by Priority to US83834714A on May 13, 1914, 1918-07-23 Application granted by publication of US1273474A.

Fleming, John Ambrose. 1905. Instrument for converting alternating electric currents into continuous currents (thermionic valve as diode). 1905-11-07 Application granted by Publication of US803684A, Great Britain patent 24850.

Forest, Lee de. 1906. Oscillation-responsive device, patent filed 19 May, granted 13 November 190 as patent US836070.

Forest, Lee de. 1906, 1908. Wireless Telegraphy (audion as a stolen Fleming's diode with a grid making a triode), on November 13, 1906 as Audion patent US841386, a triode version patented in 1908 as US879532.

Gaede, Max Paul Wolfgang. 1913. Mercury diffusion pump, German patent 286404 on 9 September 1913. Method and apparatus for producing high vacuums, US Patent 1069408, issued on 5 August 1913.

Gaede, Max Paul Wolfgang. 1921, 1923. Diffusion pump with a plurality of different pressure levels forming jet nozzles (vacuum pump without moving parts, circular-acting motorized diffusion pumps with a mercury piston), 1921-10-01 Application filed by Priority to DEG57118D, 1925-07-06 Application granted by publication of DE416065C.

Gassner, Carl, 1885, 1886. Gael gassier (Cells with aqueous electrolyte, Leclanché's "dry cell"), German patent obtained on 8 April 1886. USA Application granted by publication of US373064A on 15 November 1887. Patents in Austria-Hungary, Belgium, France and England.

Geiger, Paul Harold (assistant director of research from Ann Arbor, Michigan in 1926, from Wilkinsburg, Pa. in 1929, for Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania). 1926, 1929. Manufacture of copper oxide rectifiers (The first photocell with copper-Cu_2O insulating layer of the kind claimed by Grondahl's patent US1640335A), invented on 14 November 1926, 1929-10-09 Application filed with priority to US398576A, 1931-12-01 Publication of US1834275A.

Goebel, Heinrich (Göbel, Henry). 1882. Vacuum Pump (Improvement of the Geissler-System of vacuum pumps. USA patent US252.658A obtained on January 24, 1882.

Goebel, Heinrich (Göbel, Henry). 1882. Electric Incandescent Lamp (sockets to connect the filament of carbon and the conducting wires), patent US266.358A obtained on October 24, 1882.

Gordon, Robert H. (of Beading in the county of Berks, Pennsylvania). 1883. Apparatus for Treating Molten Metal (Modeling of ingots in a vacuum), Application granted by publication of US287273A on October 23, 1883.

Grabovski, Boris Pavlovič (Grabowski, Бори́с Па́влович Грабо́вский); Popov, Viktor Ivanovič (Виктор Иванович Попов); Piskunov, Nikolai Georgievich (Николай Георгиевич Пискунов). 1925. Radio device for vision at a distance (Радиоустройство для видения на расстоянии, Description of the apparatus for electric telescopy), filed November 9, 1925 with application certificate No. 4899, Soviet Union Patent for invention No. 5592 issued in Leningrad on June 30, 1928.

Grabovski, Boris Pavlovič (Grabowski, Бори́с Па́влович Грабо́вский); Beljanski Ivan F. (Belyansky, Иван Филиппович Белянский) (in Tashkent). Telephoto (телефото), Soviet Union patent on 28 July 1928.

Greyl, Zaharias (Greil). 1720. Swift fire extinguishing machine for cooking with extinguishing bomb (Löschbombe). City of Augsburg granted the official patent (Copia Attestati) on 16 April 1720 and 30 October 1720.

Grondahl, Lars Olai (from Pittsburgh, Pennsylvania for Union Switch & Signal Company). 1925. Unidirectional current-carrying device (copper oxide rectifiers), 1925-01-07 Application filed with priority to US1111A, 1927-07-01 Priority claimed from US202811A, Publication of US1640335A on 23 August 1927.

Gunder, Jeane D. (for the J. A. Pozzoni Pharmacal Company based in Chicago). 19 April 1912. Puff Box (titanium nitride in powder form). US Patent filed on 19 April 1912, Serial No. 691,955.

Gunder, Jeane D. 1915. Box (with fluting, scrolls and shield on the top with beading on its sides. Chicago, Ill. Patent filed on May 28, 1915, Serial No. 31,000.

Hall, Howard Tracy (filled by GE). 1954. 1955. Diamond synthesis (Presses using a plurality of pressing members working in different directions). 1955-08-29 Application filed with Priority to US530935A, 1960-08-02 Application granted by Publication of US2947608A.

Hampson, William. 1895. Improvements relating to the progressive refrigerating of gases (Liquefaction of air), British patent 10165, 23 May 1895.

Hanaman, Franjo (Ferencz); Just, Alexander. 1903. Process for production of incandescent bodies made of tungsten or molybdenum for electric incandescent lamps. German patent DRP 154262 obtained on April 1903. Hungarian patents No. 34541 in Budapest on 7 October 1904, 13 December 1904 and 6 June 1905, Austrian patent AT 20.888 on 15 February 1905, British patent "Improvement relating to the Manufacture of Incandescent Electric Lamps" GB 23.899 on 29 July 1905, patented "Process for Manufacture of Incandescent Bodies for Electric Lamps" as US 855.060 on 4 February 1907.

Hass, Georg H. (Danzig Institute of Technology). 1940, 1941. Silicon Monoxide Protected Front-Surface Aluminium Mirrors (aluminum oxide layers, Aluminiumoxydschichten). German patented process classified as a top-secret during WW2.

Heil, Oskar. 1935. Improvements in or relating to electrical amplifiers and other control arrangements and devices (MOSFET using modern theory of electrons and holes), British Patent No. 439, 457 Filed March 5, 1935, issued December 6, 1935.

Hinsdale, William R. (from Brooklyn, N. Y. for Compressed Steel Company of Cleveland, Ohio. 1885). Casting system that excluded the atmosphere and could be used for production of steel. German patent. Fluid Metal Press (Pressure casting making use of mechanical pressure devices as cast-forging). USA Patent Application granted and published as US332656A on 15 December 1885.

Hlubek, Peter (owned factory in Villingen, Baden). 1868-1869. Calculator using tooth wheels. Patented in German language. Resembled Thomas T. Strode's patent

Hlubek, Peter (owned factory in Villingen, Baden). 1875. Piston pump (Eine eigentümliche Konstruktion von Kolbenmotoren). Patented in Vienna. Noted in Landesarchiv Baden-Württemberg, Staatsarchiv Ludwigsburg.

Holweck, Ferdinand. 1914, 1924 (. Thermionic apparatus (thermionic tubes). In 25 June 1924French Patent FR1660381X, on 18 June 1925US Application filed, on 28 February 1928-Publication of US1660381A.

Holweck, Ferdinand. 1922. Molecular Pump (Spiral drum-type molecular drag pump, Pompe moléculaire). French Patent 609813 applied on 2 May 1925, published on 2 August 1926.

Hummel de Bourdon, Karl Ludwig. 1822-1827. Apparatus designed to peel and crush the grapes at the same time (Weintrauben zu glechen zeit abzubeeren und zu zerquetschen). Viennese patent held from 25 August 1822 until 1827.

Hummel de Bourdon, Karl Ludwig. 1822-1827. Joiner of timbers (Tischlerhölzer). Viennese patent held from 30 September 1824 until 1833.

Hull, Albert (for by General Electric Co.). 1920. Electric discharge device (Magnetron). On 29 January 1920 application filed with priority to US354914A, on 20 January 1925 Publication of US1523776A.

Inman, George Elmer (for GE). 1936. Electric discharge lamp (Fluorescent lamp). Filed on April 22, 1936. Granted on October 14, 1941 as U.S. Patent 2,259,040.

Ives, Herbert E. 1926. Television, patent applied in USA on May 20, 1926 under number 110,378, granted on December 3, 1929 by US no. 1,738,007.

Jablochkoff, Pavel Nikolayevich (Yablochkov (Jabločkov, Павел Николаевич Яблочков). 1876. Electric candle. French patent No. 112024 granted on 23 March 1876.

Jablochkoff, Pavel Nikolayevich (Yablochkov (Jabločkov, Павел Николаевич Яблочков). 1876. Arrangement of currents, intended for lighting by electric light (Disposition de courants, destinée à l'éclairage par la lumière électrique), French patent No.115793 granted on November 30, 1876.

Jacob, Josef (Jacobs, Viennese mine owner); Köller, Franz (Koeller, PhD in chemistry, Reichraming Guβstahlhütte). 1855. Production of Tungsten Steel, French patent in 1855, Viennese patent applied on 10 March 1858 by no. 7676 (Austrian Patent office (Patentamt) volume 7 folio 76) granted on May 10, 1858 by no. 11775.

Jenkins, Charles Francis. 1925, 1926. Twin light-cell transmitter (Remote cinema). US Patent 1642730, registered on 21 March 1925, granted on 20 September 1927.

Jenko, Monika; Vodopivec, Franc; Osojnik, Andreja. 1994. *Processing non-oriented electrical sheet metal*, Patent SI 9210326 A, filled for the Institute of Metallic Materials and Technologies, Lepi pot 11, Ljubljana: Office of the Republic of Slovenia for the Protection of Industrial Property, Date of application 30 March 1992, date of publication 30 June 1994 (A process for the treatment of non-oriented electroplate is carried out by applying a thin layer of antimony in the amount prior to and during final annealing for decarburization and recrystallization in such an amount that activated recrystallization and grain growth take place during decarburization. and crystallization so that this sheet contains from 0.001 to 0.05% Sb after annealing for decarburization and recrystallization).

Junkar, Ita; Kralj-Iglič, Veronika; Štukelj, Roman; Zaplotnik, Rok; Mozetič, Miran. 2019. Method for treatment of tools and tools used for isolation of microvesicles, nanovescicles or exsomes. European patent specification EP 3 185 921 B1, 2019-09-04. München: European Patent Office.

Karolus, August. 1924. Method for inertialess light control via Kerr effect (*Verfahren zur tragheitsfreien* Lichtsteuerung mittels Kerr-Effekt, Improved photocell of Scotsman Kerr to modulate fluctuations of light in a television set). On June 21, 1924, he received a German patent no.
471720.

Karolus, August. 1929. Device for image transmission and television with synchronously switched cell grids, German application number K 0113831 on March 9, 1929, on 21 February 1933 Publication of DE 19290308.

Kennedy, Rankin. 1882. Cathode ray tube with electrodes covered with phosphorescent material, which glowed after bombardment with cathode "rays". English patent.

Kennedy, Rankin. 1888. Transformation and distribution of electric energy. On 21 February 1888 application granted by publication of US378321A.

Kenney, David T. (of North Plainfield in the county of Somerset and State of New Jersey, for Vacuum Cleaner Co.). 1901. Apparatus for removing dust, Application filed by priority to US8405801A on 29 November 1901, Priority claimed from US93187A and from US93188A on 8 February 1902, Priority claimed from US263344A on 1 June 1905, Application granted by Publication of US847947A on 19 March 1907.

Kerwin, Robert Eugene; Klein Donald L.; John C. Sarace (of Somerset, N.J.) (for Nokia Bell Labs Murray Hill, NJ). 1967. Method for making MIS structures (self aligned gates), US Patent 3,475,234, filed on 27 March 1967 and awarded on 28 October 1969.

Kilby, Jack StClair. 1959. Miniaturized Electronic Circuits (first integrated circuit, microchip), U.S. Patent 3,138,743 filed on February 6, 1959.

Paul Kirchhoff (diploma engineer from Frankfurt on Main). 1925. Spiral scanning, filed German patent on 6 September 1925 and on 7 October 1930, granted on 14 August 1936 in Berlin.

Klasens, Hendrik Anne; Haaijman, Pieter Willem; Dam, R. W. (for Philips). 1955. Method of Producing Semiconducting Materials (barium titanate), West German Patent 929,350 on June 23, 1955.

Klasens, Hendrik Anne. (Emmasingel in Eindhoven, Philips Research Laboratories, Laboratoria N.V. Philips' Gloeilampenfabrieken, US Philips Corp. New York). June 1, 1964. Improved procedure for production of a thin-film transistor (Method of manufacturing semiconductor devices and semiconductor devices manufactured by such methods), on 20 June 1963 gilled Holland patent NL294370, on 1 June 1964 US application filed, on 6 May 1969 application granted by publication of US3442647A.

Kolar, Metod; Vesel, Alenka; Modic, Martina; Junkar, Ita; Stana-Kleinschek, Karin; Mozetič, Miran. 2020. *Method for immobilization of heparin on a polymeric material*. European patent specification EP 2997984 B1, 2020-06-03. Munich: European Patent Office.

Kovač, Janez; Dahle, Sebastian; Žigon, Jure; Petrič, Marko; Da Cortà, Giuseppe. 27 September 2019. A plasma device and a method for generating plasma: patent application in Luxembourg no. LU101420. Luxembourg: Patent Office.

Kroll, William Justin (Guillaume Justine). 1922. Process for the separation and recovery of metals from metal alloys (Industrial process separating antimony, bismuth, arsenic, tellurium from lead alloys), on 12 September 1920 application filed with priority to US41175120, on 5 September 1922 publication of US1428041A.

Kroll, William Justin. 1925. Process for separating individual metals from metal mixtures, German patent DE410533C published on 1925-03-09.

Lake, Henry Harris. 1891. Improvements in and the relating to steam boilers and other furnaces, English patent no. 13620 on 12 August 1891, noted at *The Mining Journal, Railway and Commercial Gazette*, Volume 61, Part 2 (22 August 1891) No. 2922: p. 962.

Lane-Fox, St. George William Pitt. 1878. Electric Lighting. British letter patents no. 3988 dated 9 October 1878 & no. 4626 dated 14 November 1878.

Langmuir, Irving (Schenectady, N. Y., assignor to General Electric Company). 1919. Vacuum-pump. Applied in US in 1916, US1320874 patent granted on 4 November 1919.

Langmuir, Irving (Schenectady, N. Y., assignor to General Electric Company). 1921. Method and means for obtaining High Vacua, the patent US1393550 granted on 11 October 1921.

Lasič, Danilo D.; Belič, Andrej (for Liposome Technology, Inc.). 1993. Method for instant preparation of a drug containing large unilamellar vesicles, filled February 28, 1990, USA Patent number 5185154 granted on February 9, 1993.

Leithäuser (Leithäuser), Gustav; Mrosek, Herbert (Fraunhofer-Institut Berlin-Charlottenburg). 1934. Method for modulating electrical vibrations (Verfahren zur Modulation elektrischer Schwingungen), Applied for German Patent on July 8, 1934 by application number DEL86191D, DE656604C published on 2 November 1938.

Lieben, Robert von. 1906. Cathode ray relay. DRP (German Reich Patent) no. 179807 applied on 4 March 1906, issued on 17 November 1906.

Lieben, Robert von; Reisz, Eugen; Strauss, Siegmund. 1910. Relay for undulating currents, in which an ionizer is influenced by the current fluctuations to be amplified (Telephone relay for undulating currents), DRP no. 236716 applied on September 4, 1910, published on 11 July 1911.

Lieben, Robert von; Reisz, Eugen; Strauss, Siegmund. 1910. Relay for undulating currents (Relais für undulierende Strome, So-called lattice patent), addition to DRP 236716 as DRP no. 249142 applied on December 20, 1910, published on 12 July 1912.

Lilienfeld, Julius Edgar. 1926. Method and apparatus for controlling electric currents, U.S. patent No. 1,745,175, filed October 8, 1926, confirmed-issued January 18, 1930.

Lilienfeld, Julius Edgar. 1928. Device for controlling electric current, U.S. Patent No. 1,900,018 filed on March 28, 1928, confirmed-issued on March 7, 1933.

Lilienfeld, Julius Edgar. 1928. Amplifier for electric currents, U.S. Patent no. 1877140, filed on 8 December 1928, confirmed on 13 September 1932.

Linde, Carl. 1895. Process for the liquefaction of atmospheric air or other gases, German patent 88824, applied on June 5, 1895, issued on 29 September 1896.

Lisle, Emile Armet de (for his Parisian Société anonyme (=Corporation) Françaises dite Banque du Radium). 1910. Luminescent sulfides illuminating upon radiating by radium in the vacuum. Belgium patent.

Lisle, Emile Armet de; Curie, Maurice; Varinois, Marcel-Ernest. 1919. Method and apparatus for producing images or luminous matter and its application in advertising and cinematography, on 10 May 1919 application filed with priority to FR546990T, on 28 November 1922 publication of FR546990A. Extended by: Curie, Maurice; Varinois, Marcel-Ernest. 1920. Apparatus for production of luminous images and the like, on 19 May 1920 USA application filed with priority to US38267420, on 30 May 1922 publication of US1418240A.

Lodigin, Alexander Nikolaevich (Lodyguine, Александр Николаевич Лодыгин). 1872. Illuminant for Incandescent Lamps, applied for a Russian patent in 1872, granted on 11 July 1874 with Russian patent number 1619, also patented in Austria, France, and Belgium. Electric light, GB 3,809 patent on December 14, 1872 (with Stanislav Konn). Illuminant for Incandescent Lamps, US application filed on 4 January 1893 4,1893 by serial no. 457,221, US Patent No. 575,002 applied and published on 12 January 1897.

Loeff (Löff), S. 1830. Syphon coffee method as a vacuum pot system, patented in Berlin.

Maré, Baltzar Emil Leo de junior. 1938. Method and apparatus for deoxidizing and degasifying liquid steel (vacuum degassing of the molten metal stream during casting or pouring), patented in US and Sweden on August 20, 1938. He submitted a patent for vacuum degassing of the molten metal stream during casting or pouring, applied in Sweden on September 18, 1939, granted on September 18, 1939 as SE2253421X by Serial No. 295,491. On 18 September 1939 USA application US295491A filed, on August 19, 1941 publication of US2253421A.

May, E. (probably Edmund, for Loom & machine factory formerly May & Kühling in Chemnitz). 1896. Crucible for underfeeding (Tiegel für

Unterfeuerung), German patent no. 90267 dated 11 January 1896.

May, E. (Edmund May for Loom & machine factory formerly May & Kühling in Chemnitz; Webstuhl- & Maschinenfabrik vormals May & Moritz Kühling). 1897. Burner for gasifying liquid fuels from a container with an inlet pipe and an overflow nozzle (Device for simultaneous casting of five models in an emptied receiver, Utility model Entries, burner consisting of 5 individual carburettors becoming the burner pot in one line with the shut-off valve switched on), noted as: Aus einem Behälter mit Zuflußrohr und Ueberlaufftutzen bestehender Brenner zur Vergasung flüssiger Brennstoffe; Gebrauchsmuster. Eintragungen. Gekanntgemacht im (announced in) *Deutscher Reichsanzeiger und Preußischer Staatsanzeiger (State Gazette)*. Berlin: Kessel, no. 97 on on 26 April 1897, German patent no. 73466 dated 17 March 1897 (W. 5228; *Patentblatt Bekanntmachungen auf Grund des Patentgesetzes und des Gesetzes betreffend den Schutz von Gebrauchslnustern Herausgegeben vom Reichspatentamt* no. 17 dated 28 April 1897, pp. 346, 352-353; Freytag, 1898, 57).

McGaffey, Ives W. (from Chicago, Illinois). 1869. Improved sweeping-machine (Whirlwind as wood and canvas contraption as the manually powered vacuum cleaner which cleaned rugs), patent US91145A applied and granted on June 8, 1869.

Michelssen, Fritz (for Telefunken AG, Telefunken Society for Wireless Telegraphy mbH). 1931. Luminescent screen (using zinc-cadmium sulfide for yellow and green luminescence in the right proportions, a mixture of zinc sulfide for light blue luminescence and of zinc-cadmium sulfide producing a red fluorescence results in a vivid purple or violet color), on 20 August 1931 priority to DE1988605X, US application filed on 19 August 1932, on 22 January 1935 granted by publication of US1988605A.

Michelssen, Fritz; Schleede, Arthur (both for Telefunken AG, Telefunken Society for Wireless Telegraphy mbH). 1931. Luminescent screen in discharge tubes, e.g. Braun tubes (Chalcogenides with zinc cadmium, Lumineszenzschirm in Entladungsroehren, z.B. Braunschen Roehren), on 21 August 1931 application filed by Priority to DET39349D, on 25 November 1935 application granted with publication of DE622302C.

Miessner, Benjamin J. (US naval radio station Washington D.C, formally district of Columbia). 1910. Detector for wireless apparatus (Braun's electrode with a conductor as a crystal detector for radio as the Cat's whisker detector that enabled reception of radio waves by crystal sets), Application filed on 5 October 1910, on 5 October 1910 priority to US58548410A, on 21 July 1914 Publication of US1104065A.

Moleyns, Frederick de (William Mullins). 21 August 1841. Production or development of electricity; and application of electricity for obtaining light and motion (Jobard's electricity applied for illumination). British patent no. 9053.

Monckton, Edward Henry Cradock (from Fineshade Abbey, Northants*) &* Weatherdon, Baldwin Fulford (Civil Engineer from of Kingston-upon-Thames, Surrey). 16 September 1862. A new or improved engine for obtaining and applying motive power, British patent note no. 2538 recorded in the Londoner Office of the Commissioners of Patents for Inventions on September 16, 1862 and published in *The London Gazette* on September 26, 1862 p. 4673.

Morris, Timothy & Weare, Robert (both Electricians from Birmingham at Warwickshire) & Monckton, Edward Henry Cradock. 19 May 1862. Improvements in obtaining and applying light and heat by electricity (Geissler's cathode ray tube for lighting). British patent notice no. 1516 recorded in the Londoner Office of the Commissioners of Patents for Inventions on 19 May 1862 and published in *The London Gazette* on September 30, 1862 pp. 4688-4689.

Moyer, James Wallace (for Knolls Atomic power lab of GE in Schenectady, eastern New York). June 1954. Method of making p-n junction semiconductor unit (Power Efficiency for the Photovoltaic Effect in a Germanium Grown Junction), US patent 2842466 (serial no. 436816) filed on 15 June 1954, issued on 8 July 1958.

Mozetič, Miran (some his group's recent patents are listed); Vesel, Alenka. 2001. Konfiguracija elektrod v ionski vakuumski črpalki. Patentna prijava: P-200100084, 2001-03-26. Ljubljana: Urad Republike Slovenije za intelektualno lastnino (Title Electrode configuration in an ion vacuum pump: Slovenian patent application: P-200100084, 2001-03-26. Ljubljana: Office of the Republic of Slovenia for Intellectual Property)

Mozetič, Miran; Vesel, Alenka. 2002. Ionska vakuumska črpalka z novo konfiguracijo elektrod: patent SI 20840 (A), 2002-08-31. Ljubljana: Urad Republike Slovenije za intelektualno lastnino, Št. prijave P-200200102, 2002-04-18 (Ionic vacuum pump with new electrode configuration, Slovenan patent: SI 20840 (A), 2002-08-31. Ljubljana: Office of the Republic of Slovenia for Intellectual Property, No. of application P-200200102, 2002-04-18).

Nagler, Josef. 1935. Electro-optical control for cameras, cinemas, and copiers **(**Elektrooptische steuerung für Photo-, Kino- und Kopierapparate).

Nagler, Josef. 1935. Color television with three-color cell resolution (Gebiet des Farbfernsehens mit Dreifarbenzellenauflösung). Negotiations with the US company Standard Electric were so protracted that this patent expired. His receiver for electronic color TV was developed by Baird in a color television with 120 lines scanned with Nipkow plates in red, green, and blue colors in 1936.

Nagler, Josef; his son *Josef Nagler Junior*. 1953. Verfahren und Enrichtung zur Erzeugung von Farbfernseh-Sendungen (subjektive *Farbfernsehen,* Method and device for generating color television programs as subjective color television by Gustav Theodor Fechner-Benham phenomenon*), Austrian patent AT755194X on 11 November 1953. Also West German, Denmark, and UK patents. Method and apparatus for producing color effects in projected pictures, on 8 November 1954 application filed in USA, on 18 July 1958 application granted by publication of US2844990A.*

Nardin, Julius; Zei, René. 1912. Relais für elektrische Ströme (Stand-alone relay for electrical currents applicable to telephones and telegraphs, especially useful for submarine cables), Austrian patent (Österreichische Patentschrift) no. 66604, registered-applied on 13 August 1912 with effect granted on 15 June 1913, issued on September 10, 1914.

Navinšek, Boris; Žabkar, Anton. 1983. Večsektorska vroča komora za reaktivno ionsko prekrivanje, Slovenski patent, rubrum 20286-P-1588/83 (Multisectoral hot chamber for reactive ion coating, Slovenian patent, rubrum (=red) 20286-P-1588/83).

Navinšek, Boris. 1984. JOSTiN ® - blagovna znamka, patent rubrum št. 15508-Ž-315 (Brand: use of hard protective titanium nitride coatings in industrial production of Navinšek's Ljubljana Group, which protected the domestic thin-film technology with the patent and the trademark JOSTiN (JOSTiN®) in twenty-three countries of Europe in 1983. Applications trademarks of that brand abroad might have been protected through the Slovenian firm SMELT, which was then the majority owner of the Navinšek's Center for Hard Coatings of IJS).

Navinšek, Boris; Žabkar, Anton. 1990. Zaščitne trde prevleke titanovega nitrida, pripravljene z reaktivnim ionskim prekrivanjem, patent-rubrum 202887-P-1589 (a983). Podeljen patent: Postopek za nanašanje plasti titanovega nitrida z reaktivnim ionskim prekrivanjem«; št. patenta C23C 14/46 z dne 25.5.1990 (Protective hard coatings of titanium nitride prepared by reactive ion coating, patent rubrum 202887-P-1589 (a983). Patent granted for a Process for applying a layer of titanium nitride by reactive ion coating, patent no. C23C 14/46 of May 25, 1990).

Navinšek, Boris; Krušič, Janko. 1997. *Postopek za površinsko utrjevanje zobnih modelov s trdo prevleko*. Patent št. SI 9500347A (Procedure for surface hardening of hard-coated dental models. Slovenian patent no. SI 9500347A).

Navinšek, Boris; Panjan, Peter. 1997. *Postopek za nanašanje prevleke iz kromovega nitrida z reaktivnim ionskim prekrivanjem*. Patent št. SI 9500341 (*Method for applying chromium nitride coating with reactive ion coating*. Slovenian patent no. SI 9500341).

Navinšek, Boris; Panjan, Peter. 1999. *Postopek nanašanja prevleke iz niklja z ionskim prekrivanjem na telesu iz aluminija*. Patent št. SI 9700325. Ljubljana: Urad republike Slovenije za intelektualno lastnino (*Method for applying an ion-coated nickel coating to an aluminum body*. Slovenian patent no. SI 9700325. Ljubljana: Office of the Republic of Slovenia for Intellectual Property).

Nemanič, Vincenc; Žumer, Marko; Mrzel, Aleš; Remškar, Maja; Mihailović, Dragan. 2004. *Uporaba kvazienodimenzionalnih ternarnih spojin prehodnih kovin in kvazienodimenzionalnih spojin halkogenidov prehodnih kovin kot emiterjev elektronov*: patent : SI 21289 (A), 2004-02-29. Ljubljana: Urad RS za intelektualno lastnino (Use of quasi one dimensional transition metal ternary compounds and quasi one dimensional transition metal chalcogeneide compounds as electron emitters, Slovenian patent : SI 21289). Numbers of applications: P-200200189, 2002-08-02; WO 2004/013884 (A1), 2004-02-12; EP 1540687 (A1), 2005-01-31; US 2006/231825 (A1), 2006-06-15

Nemanič, Vincenc; Žumer, Marko; Zajec, Bojan; Kocmur, Miha, 2008. Poljski mikroskop za preiskavo emisijskih mest na površini ravnih hladnih katod, patent SI 22425 (A), 2008-06-30 (Field microscope for examination of emission areas on the surface of cold flat cathodes). Ljubljana: Urad RS za intelektualno lastnino. Number of application P-200600263, 2006-11-02

Nicolson, Alexander McLean (Nicholson, from New York). 1917. Television (Recording and receiving the image along the spiral), US patent no. 1470696 filled on 7 December 1917 granted on October 16, 1923; British patents no 228961 and no. 230401 filled on 7 September 1923 and granted on 16 October 1923.

Nipkow, Paul. 1884. Elektrisches Telescope (Electric telescope), January 6, 1884 (or January 8) application filed as priority to DE188430105, on 15 January 1885 application granted by publication of DE30105C, Nipkow received 25 marks on February 8, 1884.

Nollet, Floris; issued on his behalf by Edward Clarence Shepard (Shephard). 1850. Electro-magnetic apparatus suitable for production of motive power (a practical AC generator), British patent 13302 on October 24, 1850. Shepard's Patent of Electro-Magnetic and Heat, Light and Motive Power Machines noted at: 1851. *Mechanics' Magazine, museum, register, journal, and gazette.* London: Robertson, Brooman & Co. edited by R.A. Brooman, July 3-December 25, 1851, 57/1448: pp. 358, 362-364, 410-411.

Nollet, Floris; issued by Edward Clarence Shepard. 1851. Obtaining and applying motive power, British patent no. 13727 sealed on 28 August 1851 for six months.

Nollet, Floris; issued by Edward Clarence Shepard. 1852. Improvements in electro-magnetic apparatus suitable for the production of motive power, of heat, and of light (Apparatus for lighting in a vacuum by the incandescence of charcoal, Verwendung von Kohle im Vakuum), French patent no. 11649 on April 26, 1851 with addition on April 24, 1852; British patent no. 14197 by Shepard's communication on July 6, 1852 and no. 1587 on July 1, 1853.

Nollet, Floris (Florise, professor of Physics in the Brussels Military School (École Militaire), after 1855 his heritage was used by the Societé I'Alliance (Alliance Company) formed with Auguste Berlioz as director and Nollet's co-worker Joseph van Malderen as chief engineer); issued by English patent agent and inventor Edward Clarence Shepard of Duke Street Westminster-London on the late Nollet's behalf in England and France. 1850, 1858, 1861-1862. Charcoal filament in vacuum bulbs. Edward Clarence Shepard of Victoria street, Westminster, British letter patent for the invention of an improved apparatus for carburating gas for gas lighting; petition recorded in the Office of the Commissioners on the 9 January 1861 (The London Gazette, January 25, 1861 Page 2 no. 56). Magneto-electric machine for electric light, and street-lamp carburator presented at London international exhibition in 1862.

Noyce, Robert N. (for Fairchild Semiconductor Corporation). 1959. Semiconductor device-and-lead structure (rectifier, describing a planar integrated circuit and using Hoerni's ideas), filed priority to US830507A on July 30, 1959, 30 June 1960 priority claimed from Fairchild Semiconductor Corporation's patent FR831640A, granted-accepted by publication of US2981877A on 25 April 1961.

Ohl, Russell Shoemaker (by Nokia Bell Labs). 1941. Light-sensitive electric device, 1941-05-27 Application filed with priority to Ohl's patent US395410A, on 17 September 1942 Priority to Ohl's patent US45870942, on 17 January 1944 priority to patent of Western Electric Co Inc. GB90744A, on 25 June 1946 publication of US2402662A.

Ohl, Russell Shoemaker (fot Nokia Bell Labs). 1950. Semiconductor translating device (first patent for the bombardment by oxygen, hydrogen, nitrogen, helium, argon, CO, and even $CHCl_3$ in the production of semiconductor devices), on 11 January 1950 Priority claimed from the patent US137906A of Ohl's colleague William G. Pfann of Nokia Bell Labs, on 31 January 1950 application filed with priority to US141512A, in 12 June 1956 publication of US2750541A.

Panjan, Matjaž; Čekada, Miha; Panjan, Peter; Matelič, Damjan; Mohar, Andrej; Sirnik, Tomaž; Fišer, Jožko. May 31, 2012. Trde zaščitne prevleke z možnostjo spreminjanja njihove barve. Patent SI 23538 A. Ljubljana: Urad RS za intelektualno lastnino, Patentna prijava P-201000399, 2010-11-22 (Hard protective coatings with the possibility of changing their color: Slovenian patent SI 23538 A. Ljubljana: Office of the Republic of Slovenia for Intellectual Property, Patent Application P-201000399, 2010-11-22).

Pickard, Greenleaf Whittier. 1906. Means for receiving intelligence communicated by electric waves (silicon crystal detector). Filed a patent on August 30, 1906 which was granted on November 20, 1906 by publication US836531A.

Pirani Marcello von (subject of the King of Italy, residing at Wilmersdorf by Berlin for Berliner Siemens and Halske AG). 1907. Process for producing technically pure ductile tantalum (melting of tantalum and other metals in electron beam of concentrated cathode rays), on 23 June 1906 application filed with priority to US32313306A, on 17 September 1907 Publication of US866385A in the United States.

Polumordvinov, Alexander Appolonovich of Kazan. 1899. Light distributor for a device used to transmit images at a distance with all colors and their shades and all shadows (color television system with rotating Nipkow plates and concentric cylinders with slits covered with red, green and blue filters). On December 23, 1899 (January 5, 1900) applied for a patent for his invention № 10739 to the Department of Trade and Manufactures of the Ministry of Finance of Russia. Security certificate № 9839 was dated February 27, 1906. Baird bought a patent from Polumordvinov.

Popov, Viktor Ivanovič; Grabovski, Boris Pavlovič; Piskunov, Nikolai Georgievič (in Saratov). 1925, 1930. Distance vision radio (радио-устройство для виденья на расстоянием), Application certificate dated November 9, 1925 under the number 4899, and on August 30, 1928 a Soviet Union patent was issued under the number 5592 inside class 21 a1 32 with Rosing's help. After the work in Tashkent in 1928 Grabovski and his assistant Beljanski, Ivan Filipovich filed bettered Russian patent No. 16733, class 21 a1 32, 35 for the Description of the apparatus for electric telescopy Telephoto (Телефот), granted on 30 October 1930.

Primc, Gregor; Mozetič, Miran; Zaplotnik, Rok; Vesel, Alenka; Ravnikar, Maja; Žel, Jana; Mehle, Nataša; Gutiérrez-Aguirre, Ion; Filipić, Arijana; Dobnik, David. 2018. Method for deactivation of a virus in water: patent application number 1821107.8. London: Intellectual Property Office.

Primc, Gregor; Mozetič, Miran; Vesel, Alenka; Lehocký, Marián; Stloukal, Petr; Sedlarik, Vladimír; Humpolíček, Petr. 19 December 2018. Device and method for producing UV radiation: patent EP3168860 applied 2017-05-17. München: European Patent Office.

Primc, Gregor; Mozetič, Miran; Cvelbar, Uroš; Vesel, Alenka. 11 June 2019. Method and device for detection and measuring the density of neutral atoms of hydrogen, oxygen, or nitrogen. European patent specification EP 3 146 327 B1. Munich: European Patent Office.

Richard, Jean (or Jeanne). 1825, 1837/1838. Vacuum coffee siphon (Cona type vacuum coffee maker made its appearance; two globes on top of each other, attached to a stand, functioning by air pressure) by French patent in 1837/1838, recognizing priority of the Berlin-based company Loeff in 1830.

Rignoux, Georges-Pierre-Édouard. 1906. Device for transmitting images of objects remotely (Appareil destiné à transmettre à distance les images des objets), French patent application February 10, 1906, Patent granted August 16, 1906 under no. 364,189.

Rignoux, Georges-Pierre-Édouard. 1906. Apparatus intended for transmitting images of objects remotely (Appareil destiné à transmettre à distance les images des objets), French Patent application on December 10, 1906. Patent granted on February 10, 1908 as no 382,535.

Rignoux, Georges-Pierre-Édouard. 1908. Apparatus intended for transmitting images of objects and animated views at a distance (Appareil destinés à transmettre à distances les images des objets et des vues animées, sixty-four selenium cells interconnected on the scanner contact plate at téléphote), French Patent no. 390,435 filed May 20, 1908, issued October 5 1908.

Roberts, Martyn John. 1852. Obtaining light, motion, etc. by the agency of electricity (catalogued as Incandescent lamp), patented as GB 14198 on July 6, 1852.

Rohn, Wilhelm Julius Paul (from Hanau). 1920. Process for making parts for the manufacture of high-vacuum tubes and the like. USA patent 1555316 filled on 14 May 1920.

Rohn, Wilhelm Julius Paul. 1925. Nickel-chromium-iron alloy and articles made therefrom, on 23 November 1925 priority to DE1736053X, on 16 September 1927 application filed, on 19 November 1929 publication of US1736053A.

Rohn, Wilhelm Julius Paul (for Heraeus Vacuumschmelze AG). 1931. Method of producing chromium (production of pure metal by direct reduction of chromium oxide by hydrogen), on 15 April 1931 priority to DE1915243X, on 9 April 1932 application filed, in 20 June 1933 publication of US1915243A.

Rosing, Boris L'vovich Rosing (Борис Львович Розинг). 1907. Method for the electrical transmission of images over a distance, electronic television system with a Braun's cathode ray tube (Способ электрической передачи изображений на разстояние), Russian patent no. 18,076, filed 25 July 1907, issued 30 October 1910, German (Deutsches Reich) Patent no. 209,320 filed 26 November 1907, issued 24 April 1909 as Verfahren zur elektrischen Fernübertragung von Bildern (Method for the electrical transmission of images); British patent no. 27570/1907 filed 13 December 1907, issued-granted 25 June 1908 as New or improved method of electrically transmitting to a distance real optical images and apparatus therefor; Art of electric telescopy U.S. Patent no. 1,161,734 filed 5 April 1911, on 5 April 1911 priority to US61916611A, issued-granted by publication on 23 November 1915. Similar: Electrical telescopy, U.S. Patent no. 1,135,624 filed 5 April 1911, issued 13 April 1915; British patent no. 5,486/1911 filed 4 March 1911.

Rüdenberg, Reinhold (for Siemens-Schuckert-Werken in Berlin). 1924. Oscillograph, German patents DBP 429926 and DE1695719X filled in in Germany on 20 December 1924, published in 1926. US application led by priority to DE1695719X filled by Serial No. 72,609 on 1 December 1925, Application granted by publication of US1695719A on 18 December 1928.

Rüdenberg, Reinhold (for Siemens-Schuckert-Werken in Berlin). 1931. Pictures by Electron Rays, German patent DBP 895635 filled 30 May 1931 published on 5 November 1953; DBP 916,838, filed 27 June 1931 published 19 August 1954.

Ruska, Ernst; Borries, Bodo von. 1932. Magnetic convergent lens of short field length (Concentration Coil, Magnetische Sammellinse kurzer Feldlaenge), German patent DE 680284 filed March 16-17, 1932, granted 3 August 1939, published August 25, 1939.

Ruska, Ernst; Borries, Bodo von. 1932. Device to view and control optical images, German patent DE

679857, submitted March 17, 1932, published August 15, 1939.

Savery, Thomas. 1698. Machinery for raising water, giving motion to mills (A new invention for raising of water and occasioning motion to all sorts of mill work by the impellent force of fire, Miner's Friend), filled 2 July 1698, granted on 25 July 1698 for England and Wales under No. 356.

Sawyer, William Edward (of New York); Man, Albon (of Brooklyn). 1878. Improvement in electric lamps (Nitrogen atmosphere bulb with charcoal filament), US 205,144 patent application filed May 16, 1878, on 18 June 1878 application granted by publication of US205144A.

Schröter Fritz Georg Ernst (for by Telefunken AG, Gesellschaft für Drahtlose Telegraphie mbH). 1930, Methods of scanning television pictures (Verfahren zur Abtastung von Fernsehbildern, reproduction of "half-sized" images with the successive alternation of even and odd rows), application filed on 27 September 1930, 27 September 1930 priority to DE574085T, 8 April 1933 publication of DE574085C.

Shockley, William Bradford (for Nokia Bell Labs). 1948. Semiconductor amplifier (Transistor), application of Serial No. 35,423 filed June 26, 1948, Application filed on September 24, 1948 by priority to US50897A and US50895A (both Shockley's semiconductor amplifiers), Publication of US2502488A on April 4, 1950. Reprinted in: January 1998. Semiconductor Amplifier patent. *Proc. IEEE*. 86/1: 34-36.

Shockley, William Bradford (for Nokia Bell Labs). 1949. Semiconductor translating device (manufacture of a pn-contact with ionic bombardment), Application filed with priority to US89969A on 27 April 1949, on 18 January 1954 publication of US2666814A.

Shockley, William Bradford (for Nokia Bell Labs). 1949. Semiconductor translating device (for implanting ions into semiconductors), filed May 28, 1949 as US Patent 2,672,528, granted March 16, 1954.

Shockley, William Bradford (for Nokia Bell Labs). 1954. Forming semiconductive devices by ionic bombardment, on 28 October 1954 application filed with priority to US465393A, on 2 April 1957 publication of US2787564A.

Shockley, William Bradford. 1956. Semiconductor shift register, filled on 25 April 1956, granted as US patent no. 2967952 on 10 January 1961.

Siemens, Werner von; Hefner-Alteneck, Friedrich Franz Heinrich Philipp von (for Siemens and Halske company). 1873. Differential lamp, British patent №. 2,006 on June 5, 1873, French patent 99828 on July 5, 1873, addition dated on June 21, 1878.

Siemens, Charles William sir (of Westminster, Middlesex, England). 1879. Improvements in apparatus for manufacturing and moulding glass furnaces (Regenerative electric metal melting furnace), Letters Patent for Great Britain No. 4,763 on 22 November 1879.

Simpson, William Speirs (of London). 1892. Apparatus for casting metals (frying pan instead of the melting furnace, which he placed together with the mold in his emptied receiver). US Application filed September 15, 1892 by Serial No. 445,992, Publication of US493047A March 7, 1893 based on patents obtained in England No. 13,298 on July 20, 1892; in France No. 209,991 on July 25, 1892; in Germany No. 13,702 on July 26, 1892; in Belgium No. 76,207 on 28 July 1892 & Useful Improved Apparatus for Ejecting the Casting of Metals in Vacuo, patented in Great Britain No. 13,298 dated July 20, 1892; in France No. 209,991 dated July 25, 1892; in Belgium No. 76,207 dated July 28, 1892, in Germany No. 13,702 dated July 26, 1892.

Slišković, Josip (for Kapsch & Sons in Vienna). 1927-1929. Polydyne four lamp radio (4-Lampen-Radiogerät).

Slišković, Josip (for Kapsch & Sons in Vienna). 1929. TV system in December 1929 as part of a talk at the International Radio Club (IRC), April 1930 presentation at the Physical Institute of the University of Vienna and at 1930 Viennese Autumn Fair.

Smakula, Olexander (for Carl Zeiss AG). 1935. Method for increasing the light transmission of optical parts by lowering the refractive exponent at the interfaces of these optical parts (vapor deposition of CaF_2), Patent DE 685767 published on 1 November 1935.

Spangler James M. (of Canton, Ohio). 1908. Carpet sweeper and cleaner (portable electric vacuum cleaner), on 14 September 1907 application filed as US39286307A, Publication of US889823 on June 2, 1908.

Staite, William Edwards; Greener, William. 1846. Carbon enclosed in airtight transparent vessels, British patent GB 11076 on February 4, 1846.

Starr, John Wellington; King, Edward Augustin (of Warwich street, Middlesex, acting in Starr's name). 1844, 1845. Invention of improvements in obtaining light by electricity (lamp filled by platinum propelled by Grove's cells). In Washington D.C. in 1844 Starr filed a "caveat" or claim that he was preparing to file for a patent for his lamp and generator, which granted his rights for one year. British government granted and sealed a patent no. 10,919 (in King's name) for Starr's incandescent light on November 4, 1845, enrolled on May 4, 1846 (*The Repertory of Patent Inventions.* London, volume 7 (January-June 1946): 335-338).

Starr, John Wellington; Sanders, John Milton (in Starr's name). 1845, 1846. Electro-magneto machine (Generator co-designed by Starr and Sanders). British government patent no. 11,188 on 30 April 1846, enrolled on 30th October 1846.

Strode, Thomas T. (of Mortonville in the county of Chester, Pennsylvania). 1860. Improvement in Adding Machines (for Numbers), publication of US30264A patent dated on October 2, 1860.

Swan, Joseph Wilson. 1864, 1865. Transfer process for making carbon prints, a permanent photographic process as carbon photographic process, British patent 503/1864. Improvements in the production of printed surfaces by photographic agency (Photo-Mezzotint Prints), British patent no. 1791 on 6 July 1865.

Swan, Joseph Wilson (of Newcastle-on-Tyne, England). 1860, 1879, Vacuum lamp with charcoal filament, British patents nos. 18 & 250, filled in 1879 granted in 1880.

Swan, Joseph Wilson (Newcastle-on-Tyne, England). 1879, 1880. Improvements in electric lamps, and in the materials employed in their construction (treating cotton to produce parchmentised thread, catalogued as as Electric Lighting by Incandescence). British Patent No. 4933 filed on January 2, 1878, granted on November 27, 1880, noted at Royal Institution of Great Britain's Weekly Evening Meeting on Friday, 10 March 1882. US patent filled on 16 June 1880, application granted by publication of US234345A on 9 November 1880.

Swaty, Franz. June 1879. Procedure for production of hones, grinding tools and wheels in mineral bond (mineral bonded abrasives), using his own process patented in Vienna.

Swaty, Franz. 1903. The self sharpening/refacing hone with the glimmer particles (Alumin-Abziehstein, Alumina Razor Hones), registered by the Austrian Patent Office in 1903.

Swaty, Franz (from Maribor (Marburg)). 1911. "Grizzlith" Horns and grinding stones. US Patent Office. Ser. No. 53,892 (Class 4. Abrasive Detergent and polishing materials). Filed on 14 January 1911, granted-published on 14 March 1911. Claimed use since 18 October 1909. (*Official gazette of the United States Patent Office* volume 164 (March 1911): p. 498; *Official gazette of the United States Patent Office* volume 170 (12 September 1911): p. 489).

Swaty, Franziska remarried Bayer (doing business as widow of Franz Swaty in Maribor, Yugoslavia by claiming use since June 1879). 1925. Abrasive detergent and polishing materials, patent filed on 19 June 1925 under USA Ser. No. 216,662.

Swaty, Franziska remarried Bayer (doing business as widow of Franz Swaty in Maribor, Yugoslavia by claiming use since June 1879). 1926. Razor hones, grinding tools, sharpening stones, and sharpening wheels. Registered on January 16. 1906 by Franz

Swaty, Marburg, Austria-Hungary. Renewed on 16 January 1926 by Franziska Bayer Swaty under US no. 48808 (*Official gazette of the United States Patent Office* volume 348 (12 July 1926): 329; *Index of patents issued from the United States patent office* 1926, Washington: Government 1927, pp. 988, 1578-1579).

Szczepanik, Jan (Engineer); Kleinberg Ludwig (Banker, both of I Bartensteinstrasse 16, Vienna). 1897. Method and Apparatus for Reproducing Pictures and the like at a Distance by Means of Electricity (transmitting a picture by synchronously oscillating mirrors). British Patent No. 5031 applied on 24 February 1897, Complete Specification Left on 16 November 1897, Accepted on 24 February 1898.

Šlebinger, Vladimir (at Telecommunications and Telegraph Technology (Fernsprechtechnik und Telegraphentechnik) department of Heinrich-Hertz-Institut für Schwingungsforschung (Institute for Oscillation Research, HHI) at Franklinstrasse 1 Berlin-Charlottenburg established on 23 February 1928). 1932. Synchronisation des Bildes im Empfänger (synchronization of the image in the receiver), applied for German patent (Deutsches Reichspatent); Lichtmodulation des Kathodenstrahls (light modulation of the cathode ray), applied for German patent (Deutsches Reichspatent). Patents were never granted-published as they are not noted in *Patentblatt Bekanntmachungen auf Grund des Patentgesetzes und des Gesetzes betreffend den Schutz von Gebrauchslnustern Herausgegeben vom Reichspatentamt* in Berlin in 1932 (volume 56) or in any other volumes of that *Patentblatt*.

Taussig, Eduard de (Bahrenfeld, now the western quarter of the city of Hamburg in Holstein in Germany). 1889, 1893. Darstellung der Metalle mittels Elektricität, German Patent No. 52 650 in 1893. Addition with the same title by German patent no. 72129 on 10 February 1893. Equipment for melting and casting, as well as for the representation of metals, both from their ores and from metal-containing slags, in air-diluted space with the help of electricity (electric furnace with a mold in a emptied receiver, improved process of smelting and casting, its leading feature being that the operations are carried on in a partial vacuum, Einrichtung zum Schmelzen und Giessen, sowie zur Darstellung von Metallen, sowohl aus ihren Erzen, als auch aus metallhaltigen Schlacken, im luftverdünnten Raum und mit Hülfe der Elektrizität), Applied for German Patent on 7 February 1893, Published on 15 September 1893 as No. 18930207. Additional English patent in 1893. Italian patent: Processo per fondare e calore i metalli in una capacità ad aria rarefatta 53: 259 on 17 April 1890 and Processo per pulire metalli... 66: 135 on 6 April 1893 (*Gazzetta ufficiale del regno d'Italia*, Roma, 17 December 1894. no. 302, pages 6354, 6366).

Tesla, Nikola (of New York); Peck, Charles Fletcher (of Englewood, New Jersey, assigned one-half). 1887, 1888. Electro-magnetic motor (electric motor on alternating current), on 12 October 1887 application filed with priority to US1887252132, Application granted by Publication of US381968A on 1 May 1888 (on the same day under the same title he also patented US381969A, System of Electrical Distribution as US381970A, etc.).

Tesla, Nikola. 1891. Electric Incandescent Lamp, Application granted by Publication of US455069A on June 30, 1891.

Tesla, Nikola. 1899. Method of intensifying and utilizing effects transmitted through natural media (transmitting signals or intelligence from sending to a distant receiving station by current diffused through the earth), Application filed for Priority to US6231599A on June 24, 1899, on 5 November 1901 application granted by publication of US685953A.

Tholander, Henrik Evald (Thålander at Forsbacka Jernverks (Ironworks) in Sweden while he was employed as cabin engineer and metallurgist in 1875-1892 at 65 km distant Avesta Jernverks AB). 1881. Eliminated gases from the molten steel contained in a converter or pouring ladle by reducing the pressure, as in the case of other fluids, the gases released at a higher pressure escape from the molten steel when the air begins to get thinner, German patent no. 16479 granted on 30 June 1881.

Thurman, John S. (of St. Louis, Missouri), 1898, 1899. Pneumatic carpet-renovator (first motorized vacuum cleaner), Application filed with priority to

US69645898A on 14 November 1898, application granted by publication of US634042A on October 3, 1899.

Trump, John George; Cloud, Robert William (both for High Voltage Engineering Corporation (HVEC) Burlington, Massachusetts established by Trump and Van de Graaff). 1957. High-vacuum pumps for high-voltage acceleration tubes, application filed with priority to US666150A on 17 June 1957, on 16 February 1960 application granted with publication of US2925504A.

Valvasor, Janez Vajkard. 1687, 1692. Method of casting Statues in Metal; together with an Invention of his for making such cast statues of an extraordinary thinness, beyond any thing hitherto known or practised, published in *Phil. Trans*. and in *Actorum Eruditorum*.

Velde, Ties Siebolt Te (Tics Siebalt of Emmasingel in Eindhoven; Koelmans, Hein (both for Philips Research Laboratories (Laboratoria N.V. Philips' Gloeilampenfabrieken) filled by Philips Corporation in New York). 1966. Method of manufacturing a semiconductor device, application US630026A, on 14 April 1966 priority to NL666604963A, 11 April 1967 application filed in US, 2 December 1969 publication of US3481030A.

Vesel, Alenka; Mozetič, Miran; Ogrinc, Nives; Fras Zemljič, Lidija; Kraševac Glaser, Tjaša. 31 May 2019. Film and production method: UK patent application GB 1907793.2. London: Intellectual Property Office.

Wainwright, Jacob Tripler (Chicago civil engineer). 1898, 1899. Machine for exhausting molten metal at high temperature (improvement of Aitken's method), specification forming part of Reissued Letters od US Patent No. 11,737, dated April 25, 1899 (Original No. 598,031, dated January 25, 1898). Reissue No. 11,671, dated June 21, 1898, Application for new reissue filed November 14, 1898 by US serial No. 696,471 (*Official gazette of the United States Patent Office* (25 April 1899) Volume 87: 683). Patented in United Kingdom on 28 January 1898.

Waldron, Frederic Barnes (of Eccleston Park, Prescot, England). 1949. Manufacture of steel (A method of extracting gases that are occluded in molten steel which comprises continuously flowing such molten steel into the bottom of an enlarged chamber which is maintained under vacuum, continuously and unrestrictedly flowing the molten steel through said chamber while it rises therein to a substantial height due to the vacuum in said chamber whereby the occluded gases are separated from the steel and are withdrawn from said chamber by a gas extraction appliance and with drawing the degasified steel from a point at the bottom of said chamber into a chamber at atmosphere), Priority to GB2587793X on 5 April 1949, Application US105516A filed on 19 July 1949, on 4 March 1952 application granted by publication of US2587793A.

Wieghorst, Wilhelm Anton Friedrich (of the firm Wilhelm Anton Friedrich Wieghorst and Comp. in Hamburg). 1882. Baking-Oven (Steam furnaces, Einrichtung eines Röhrenbackofens mit Wasserheizung) Patented in London on March 1, 1882 (on 7 March 1882 according to *The Commissioners of Patents' journal*, volume 37); patent no. 61739 in Belgium on 18 June 1883; USA patent filled on 2 October 1883 granted by US302457 (*Official gazette of the United States Patent Office* 22 July 1884, 28: p. 346).

Williams Clyde E. (of Columbus, Ohio). 1931. Method of purifying metals (lifting a metal in a molten state upwardly through a tube by the introduction of substance in vapor phase under pressure into the metal in tube), US Application filed by Priority to US524583A (Serial No. 524,583) on March 23, 1931, Application granted by publication of US1921060A on 8 August 1933.

Zalar, Anton; Podgornik, Bogdan. 1984. Patentna prijava, Postopek za določanje globinske sestave vzorca, P 1697/84, IEVT, Ljubljana (Patent application, Procedure for determining the depth composition of a sample, Slovenian patent P 1697/84, IEVT, Ljubljana). Anton Zalar applied only for a Slovenian patent on sample rotation during AES analysis of thin films as he reported in Zalar, 2007 page 13. It appears that IEVT institute was reluctant to pay international patent fees at the time. The "Zalar Rotation" system or method and mechanism is still extremely relevant today. In the US company Physical Electronics, it is still referred to under this name, while all other companies that use it on their instruments call this method only "sample rotation". The "Zalar Rotation" method and mechanism is still extremely relevant today for precise characterization of thin films in particularly in microelectronics. In the US company Physical Electronics producing the surface analytical equipment, it is still referred to under this name, while all other companies that use it on their analytical instruments call this method only "sample rotation". Zalar rotation system was not internationally patented, but Slovenian trademark protection was obtained. Zalar rotation (Zalar, 1985, 223) is a very significant refinement of the method of investigation of thin-layer structures, which significantly improved the depth resolution in the nanometric region and enabled the investigation of chemical reactions and diffusion at the interfaces internal phase boundaries of multilayer structures.

Zaplotnik, Rok; Mozetič, Miran; Primc, Gregor; Vesel, Alenka; Hori, Masaru; Osamu, Oda. 2019. Method and apparatus for deposition of carbon nanostructures: patent application PCT/EP2019/084734. London: Intellectual Property Office.

Zöller (Zoeller), Alfred (from Charlottenburg by Berlin). 1913. Hohle Glasscheibe (Hollow pane of glass, of various shapes, including corrugated glass plates containing separate discharged volumes), German patent application filed with priority to DEZ13429D on 29 October 1913, Application granted by Publication of DE387655C on 2 January 1924.

Zöller (Zoeller), Alfred (from Charlottenburg by Berlin). 1915. Electric Lamp, German Patent filled on 1 November 1913 and granted in 1915. The USA application filled on November 10, 1916 under Serial No. 130,074, granted under the provisions of the act on 3 March 1921 (*Official gazette of the United States Patent Office* (20 July 1926) volume 348: p. 707).

Zworykin, Vladimir Kosma (for CBS Corp. and Westinghouse Electric and Manufacturing Co.). 1925-1927. Television system, Application filed by Priority to US43219A on 13 July 1925, application granted by publication of US1691324A on 13 November 1928. Similar: Improvements in or relating to television systems (fluorescent calcium tungstate for blue light of color television, an insulating layer of alumina or magnesia), Application filed-registered on July 3, 1926 under no. 16,736/26, granted by publication of GB255057A on 31 March 1927.

Zworykin, Vladimir Kosma (for Westinghouse Electric and Manufacturing Co.). 1923. Television system, application filed by priority to US683337A on December 29, 1923, Priority claimed from US376117A on 5 July 1929, Priority claimed from US57648531 on 21 November 1931, first worldwide litigation filed on 6 October 1938, application granted by publication of US2141059A on December 20, 1938.

Zworykin, Vladimir Kosma (of Swissvale, Pa., for Westinghouse Electric and Manufacturing Co.). 1929. Vacuum tube (kinescope), Filed November 16, 1929, issued in the United States under no. 2109245 on February 22, 1938.

Zworykin, Vladimir Kosma (of Haddonfield. N. J., for RCA Corp.). 1931. Method of and apparatus for producing images of objects (iconoscope), application filed by priority to US574772A on 13 November 1931, application granted by publication of US2021907A on 26 November 1935.

37.5 Journals & Periodicals

Acta Eruditorum = Actorum Eruditorum, published from 1682 to 1782 in Leipzig.

Almanacco provinciale della Dalmazia per l' anno 1819. Zara: Stamperia Governiale. Published in 1817-1848.

Am. J. Roentgenol. = American Journal of Roentgenology and Radium Therapy. New York City: The Societies American Roentgen Ray Society & American Radium Society published in 1922-1951, later renamed to *Am J Roentgenol Radium Ther Nucl Med = The American Journal of Roentgenology Radium Therapy and Nuclear Medicine*. In 1976 renamed back to *American Journal of Roentgenology*.

Ann.Chim. = Annales de chimie et de physique. Paris.

Ann. Phys. (Annals of physics) = Edited by Ludwig Wilhelm Gilbert under the titles *Annalen der Physik* and *Annalen der Physik und der physikalischen Chemie* in 1799–1824. *Annalen der Physik und Chemie* of Leipzig or while edited by Johann Christian Poggendorff (* 1796; † 1877) in 1824–1876 and by Gustav Heinrich Wiedemann in 1877–1899. Also called *Pogg.Ann.* or *Wied.Ann* subsequentially. Under the editorship of Paul Karl Ludwig Drude *Annalen der Physik* in 1900–1906.

Annual report of the Commissioner of Patents for the year… Washington: United States congressional serial set, Senate document (also reprinted in Scientific American).

Archeografo Triestino Raccolta di Memorie, Notizie e Documenti Particolarmente per Servire Alla Storia di Trieste, del Friuli e dell'Istria = published by Società di Minerva in Trieste from 1829. In 1890 edited by Domenico Rossetti, Società di Minerva, Deputazione di storia patria per le Venezie. Sezione di Trieste.

Archiv. Math. = AM = Archiv der Mathematik und Physik mit besonderer Rücksicht auf die Bedürfnisse der Lehrer an höheren Unterrichtsanstalten (also: Grunerts Archiv, Gruner's Archiv) scientific journal established by Johann August Grunert in 1841, published until 1920. It replaced *Mathematical Archives; Archiv für die gestammte Mathematik* (Mathematisches Wörterbuch; oder Erklärung der Begriffe, Lehrsätze, Aufgaben und Methoden der Mathematik mit den nöthigen beweisen und literarischen nachrichten Begleitet in alphabetische Ordnung. (ed. Klügel, Mollweide, Grunert. Leipzig: E. B. Schwicker) which published 5 volumes in years 1803-1831.

Berlin.Ber. = Sitzungsberichte der Königlich Preussischen Akademie der Wissenschaften zu Berlin (sessions of Prussian Academy of Sciences).

Beschreibung der Erfindungen und Verbesserungen, für welche in den kaiserlich-österreichischen Staaten Patente ertheilt wurden, und deren Privilegiums-Dauer nun erloschen ist... welcher die Privilegien vom Jahre 1821-1835 enthält. Wien: Kaiserl. Königl. Hof- und Staats-Aerarial-Druckerei, Volume 1 published in 1841. Volumes 1-5 published in 1841-1847.

Bollettino della Società Adriatica di Scienze Naturali in Trieste = Acts of society whose member of board was N. Vlacovich under the presidency of the botanist knight Muzio de Tornmasini.

Brit. J. Appl. Phys. = British Journal of Applied Physics.
Bull. de la Soc. Philomath. = Bulletin de la Société Philomathique de Paris, published in Paris in 1791-1948.

Caffè: o sia, Brevi e varj discorsi già distribuiti in fogli periodici Venezia: Appresso Pietro Pizzolato, edited in Milano in Milan from June 1764 until May 1766 by the counts Pietro Verri & Alessandro Verri and the marchese di Cesare Beccaria for their Società dei Pugni (Accademia dei Pugni) established in 1761 in Milano.

Carl's Rep. = Carl, Philipp Franz Heinrich (ed) Repertorium für Experimental-Physik, für physikalische Technik, mathematische & astronomische Instrumentenkunde.

Catalogus = *Catalogus Personarum & officiorum Provinciae austriae Societatis Jesu Pro Anno….* Vienna: Societas Jesu of Österreichische Provinz. Last published edition of Old Jesuit Society printed in 1773.

Chemical News = *The Chemical news and journal of industrial science; with which is incorporated the "Chemical gazette." A journal of practical chemistry in all its applications to pharmacy, arts and manufactures*. London: Davey (ed. Crookes, William, Chemical news Office), published in 1859-1932.

The Commissioners of Patents' journal, started publishing in 1854 by London: The Office of The Commissioners of Patents, printed by George Edward Eyre and William Spottiswoode.

CR = C.R. = *Comptes Rendus Hebdomadaires des Séances de l'Académie des Sciences*, Paris: Bachelier.

Časopis pro pěstování mathematiky a fysiky in Prague published since 1872 by the Union of Czechoslovak Mathematicians and Physicists (*Jednota českých matematiků*). In 1951 changed title to *Časopis pro pěstování mathematiky.*

Dassenbacher, Johann E. (ed.). 1868. *Schematismus der Mittelschulen der im Reichsrate vertreteten Länder und der Militärgrenze II*. Znaim: self-publishing (Selbstverlage) (SSMULJ-12134). Continuations: *III Jahrgang* 1869. Wien: Selbstverlage (SSMULJ-47514; NMLJ-33472). 1872. *Schematismus der Mittelschulen der im Reichsrate vertretenen Länder und der Militärgränze / 5. Jahrgang, Jahrbuch der Unterrichts-Anstalten der im Reichsrate vertretenen Königreiche und Lände*. Mährische Neustadt (Uničov by Olomouc): self-publishing; 1882. *Schematismus der österreichischen Mittelschulen (Mittelschülen) und der Fachschulen gleichen Ranges: vierzehnter Jahrgang 1881/1882: nebst Status... / nach amtlichen Quellen zusammengestellt von Joh. E. Dassenbacher*. Wien: Carl Frömme, 1882 (SSMULJ). Dassenbacher's *Schematismus* were published in 1868-1882.

Deutscher Reichsanzeiger und Preußischer Staatsanzeiger. Printed by Berlin: Kessel, published from 1st volume on 4 May 1871 until 145th volume in April 1945.

Deutsche Wacht = *Deutsche Wacht (German Guard, Nemška straža)* was published weekly on Saturdays by Vereinsbuchdruckerei Celeja in German Language in Celje from 1883 to 1919. It was renamed from *Cillier Zeitung (Celje Journal)* and it was again renamed the *Cillier Zeitung* in 1929.

Diarium = Diaries of Ministers of the Jesuit College in Ljubljana. SI_AS 1073.

Dinglers Polytechnischen Journal = in 1820 established and edited by Augsburg manufacturer Johann Gottfried Dingler, soon coedited by his son Emil Maximilian Dingler.

Domovina (Celje) = *Domovina (Homeland)* edited by its owner Dragotin Hribar from 5 May 1892, later in that year replaced by newly established consortium of the Narodna tiskarna (National Printing). The management of the editorial board was taken over by the then lawyer candidate dr. Vekoslav Kukovec, later leader of the Styrian Liberals of National Party.

Electrical Review (New York) = Weekly published in 1882-1922 by Delano & Co. in 1883-1891, later by Electrical Review Pub. Co. as *Illustrated electrical review: a journal of scientific and electrical progress* in 1891-1897. Other titles used were: *Review of the telegraph and telephone; Electrical review and western electrician; Electrical review and industrial engineer*.

The Engineer, London: Office for Publication and Advertisement.

Ephemerides Astronomicae = *Ephemerides astronomicae ad Meridianum Vindobonensem jussu Augustorum calculis definitae a M. Hell.* Vienna: Trattner, edited by Hell, Maximilian in 1757-1793 and Franc de Paula Triesnecker until 1806.

Fernsehen = Allgemeiner Deutscher Fernsehverein was founded on September 13, 1929 and began to issue *Fernsehen* magazine in August of the following year in Berlin by the publishing company of R. Reckendorf. The journal *Fernsehen Zeitschrift für Technik und Kultur des Fernsehwesens und des Tonfilms* was published in Berlin in 1930-1942, already in 1934 by Weidmann publishing house. Fritz Banneitz was editor in 1932, already in 1934-1936 joined by Paul Gehne and Gustav Engelbert Leithäuser.

Fowler, George. 1838-1839, *Fowler's Paisley Commercial Directory for 1838-1839: containing an alphabetical list of the merchants, traders, manufacturers, and principal inhabitants; also a copious street guide of Paisley, and an appendix containing useful lists and tables*. Paisley (Scotland): George Fowler, Ninth publication.

Fremden Blatt = Monatschrift published in Vienna but also in Habsburgian Milano and Nice.

Gazzetta ufficiale del regno d'Italia, Roma = official newspaper where texts of the laws and decrees of the Kingdom of Italy were officially disclosed from January 4, 1860 to June 18, 1946.

Gazzetta (ufficiale) di Zara, 1835. Zadar (Zara): Giovanni Demarchi. Published in 1832-1850.

Giornale d'Italia spettante alla scienza Naturale e principalmente all'Agricoltura, alle arti ed al Commercio. Venice: printed by Benedetto Milocco, edited by Francesco Grisellini 1765-1776 (former owner the Ljubljana based Society for agriculture and useful arts (Družba za kmetijstvo in uporabne umetnosti) now NUK-5341).

Giornale de' letterati D'Italia Venezia: Giovanni Gabbriello Ertz (Hertz). Founded in 1710 by Apostolo Zeno, Scipione Maffei, and Antonio Vallisneri. Edited by Zeno, Apostolo after 1718 by his brother Zeno, Pietro Caterino. Published until 1740.

Glas Naroda = The People's Voice was a Slovenian workers' paper in the United States, published in New York from 1893 to 1963.

Glas Naroda = unrelated to above, published by Josip Knaflič, editors Ante Gaber, Milan Zadnek, Ivan Albreht, Josip Knaflič et all, printed by Ljubljana based Narodna prosveta in 1935-1936.

Grazer Geschäfts- und Adreß-Kalender für das Jahr... Graz: Selbstverlag der Buchdruckerei Gutenberg.

Historia Annua = Yearbook of Ljubljana Jesuits in three parts 1596-1773 where the middle part covering the years 1692-1721 was lost after WW1: SI_AS 1073. Collection of manuscripts. 180 r: Historia annua Colegii Societatis Jesu Labacensis (1596-1691). Published in: Baraga, France (ed.). 2002. Historia annua Colegii Societatis Jesu Labacensis (1596-1691). Ljubljana: Družina (Family) and in: Baraga, France (ed.). 2003. *Letopis Ljubljanskega kolegija Družbe Jezusove (Yearbook of Ljubljana college Society Of Jesus) (1596-1691)*. Ljubljana: Družina (Family). Historia Annua Collegii Labacensis anni 1722-1773. *NUK*. 5/53; Annua Collegii Labacensis 1722-1773. *NUK*. Ms 1544.

Hof- und Staats- Schematismus der römisch kaiserlichen auch kaiserlich-königlichen und erzherzoglichen Haupt- und Residenz-Stadt Wien: (derer daselbst befindlichen höchsten und hohen unmittelbaren Hofstellen, Chargen und Würden, niederen Kollegien Instanzen und Expeditionen) für das Jahr... (1776/1779-1804/1897). Wien: Joseph Gerold.

Hof- und Staatsschematismus (Staats-Schematismus) des Österreichischen Kaiserthums. 1807-1843. Wien. Continued as: *Hof- und Staats-Handbuch des Kaiserthumes Österreich (Hof- und Staatshandbuch des Österreichischen Kaiserthums).* 1844-1868. Wien. Continued as: 1874-1918. *Hof- und Staats-Handbuch des Österreichisch-ungarischen Monarchie für* das *Jahr...: nach amtlichen Quellen Zusammengestellt*, Wien: Druck und Verlag der k. k. Hof- und Staatsdruckerei.

HSPS = *Historical studies in the physical sciences*, University of California Press in Berkeley. The first editor Russell McCormmach published ten volumes under that name in 1969-1979, later edited by John Heilbron who added "biology" to the title, now *Historical studies in the Natural sciences* edited by Cathryn Leigh Carson in 2008-2013.

(Subject-matter) Index of patents issued from the United States patent office, Washington: Government, published annually after 1874.

Instanz Schematismus für das Herzogthum Krain: ... Laibach (Ljubljana): Gedruckt bei Ignaz Merk, 1796–1803.

Instanzen Schematismus vom Herzogthume Krain, dann der gefürsteten Grafschaften Goerz und Gradiska : für das Jahr ... Laibach (Ljubljana): Gedruckt den Leopold Eger, 1804–1806.

IRE Trans. Electron Devices = IRE Transactions on Electron Devices.

La provincia dell'Istria: organo ufficiale per gli atti della Società agraria istriana. Koper (Capodistria): Giuseppe Tondelli (later B. Appolonio & Caprin, finally Carlo Priora). Published from 1 September 1867 until 1903. Edited alternatively by Nicolo de Madonizza and Anteo Gravisi. In 1867-1894 published as *La Provincia dell'Istria = La provincia: giornale degli interessi civili, economici ed amministrativi dell'Istria.* Koper (Capodistria): G. Tondelli.

Journal de Physique, de chimie, d'histoire naturelle et des arts. Initially: *Observations sur la Physique, sur l'histoire naturell et sur les arts (de chimie, d'histoire naturelle et des arts), avec des blanches en taille douce dediées a Mgr le Comte d'Artois; Par M. L'Abbé Rozier, de plusieurs Académies, & par M. J. A. Mongez le Jeune, Chanon Régulier de Sainte-Genevieve, des Académies Royales des Sciences de Rouen, de Dion, de Lyon, &c, &c.* (ed. Jean François Pilâtre de Rozier & Jean-André Mongez, later also Jean-Claude de La Métherie & Henri-Marie Ducrotay de Blainville). Paris: Ruault / Paris: Au Bureau du Journal de physique, rue & Hôtel de Serpente / Paris: Bachelier.

J. Am. Chem. Soc. = Journal of the American Chemical Society.

J. Vac. Sci. Technol. A = Journal of Vacuum Science & Technology A: Vacuum, Surfaces, and Films. New York: Published for the Society by the American Institute of Physics after 1983.

Journal littéraire de la Haye printed in The Hague by Thomas Johnson and edited by French Huguenot refugee Prosper Marchand in 1713-1723.

Kayserlicher Und Königlicher Wie auch Ertz-Herzoglichen Und Dero Residenz-Stadt Wien Staats- und Stands-Calender. Wien: Joseph Gerold, 1790-1804.

Kayserlicher Und Königlicher Wie auch Ertzhertzoglicher Dann Dero Haupt- und Residentz-Stadt Wien Staats- und Standes-Calender, Auf das Gnaden-reiche Jahr ... Mit einem Schematismo gezieret. Cum privilegio Caesareo speciali. 1843, 1844. Wien: Johann Baptist Schönwetter. In 1735-1767 printed by Leopold Johann Kaliwoda in Vienna.

Královská česká společnost nauk (KŠSN, Societas Scientiarum Bohemica; Königliche böhmische Gesellschaft der Wissenschaften). 1791 – 1799. *Kaiserlich Königlicher Schematismus für das Königreich Böhmen auf das Jahr…* Prague: Jan Nepomuk Ferdinand Schönfeld. Continued in 1801-1903 as printed in Prague by Haase.

Kras = Kras: revija o Krasu in krasu, o ljudeh in njihovem ustvarjanju, edited by Ida Vodopivec-Rebilj, her husband Dušan Rebolj and their sons Lev & Aljoša, printed by Komen: Mediacarso in 1994-2013.

Kundschaftsblatt = Wöchentliches Kundschaftsblatt des Herzogthums Krain. Ljubljana: Janez Friderik Eger, volume 1 (1775), volume 2 (1776), published by Carniolan Society for Agriculture and Useful Arts, edited by B. Hacquet or by G. Schöttl, or by both as they never signed themselves.

Lehmann, Adolph. 1859-1922. *Adolph Lehmann's allgemeiner Wohnungs-Anzeiger nebst Handels- u. Gewerbe-Adressbuch für d. k.k. Reichshaupt- u. Residenzstadt Wien u. Umgebung.* Wien: Hölder.

LZ = Ljubljanski Zvon (Ljubljana Bell journal).
LZg = *Laibacher Zeitung (Ljubljana Daily)* (Ljubljana: Ignaz Alois Edler v. Kleinmayr). Its Official Gazette part: *Amtsblatt zur Laibacher Zeitung.* Its weekly supplement was *Laibacher Wochenblatt (Ljubljana Weekly).*

The London Gazette = the most important among official journals in the United Kingdom first issued on November 7, 1665.

Marburger Zeitung = first printed Maribor newspaper edited by Maribor (Marburg) German minority in 1862-1945, issued two or three times per week until 1919 and later as a daily.

Mechanics' Magazine, museum, register, journal, and gazette = Founded by the Scottish patent agent Joseph Clinton Robertson as its predominant editor in 1823, printed in London by M. Salamon &. in 1829-1852 issued 47 volumes. Printed in London: Robertson, Brooman & Co. and edited by R.A. Brooman on July 3-December 25, 1851.

Militär-Schematismus des österreichischen Kaiserthumes. 1815-1868. Wien: Hof- und Staatsdruckerei. Later in 1870-1888 published as: *Kais. Königl. Militär-Schematismus für*... Wien: Staatsdruckerei. Later in 1889-1914 published as: *(Militär-) Schematismus für das kaiserliche und königliche Heer und für die kaiserliche und königliche Kriegsmarine* (*Kriegs-Marine)* für… Wien: Staatdruckerei.

The Mining Journal, Railway and Commercial Gazette established in 1835, printed in London by Henry English in 1844-1908.

Mitt. nat. Ver. Steier. = *Mittheilungen des naturwissenschaftlichen Vereines für Steiermark.* Graz.

Narodne novine (Zagreb) = established by Ljudevit Gaj as *Novine Horvatzke* 1835, firstly renamed to *Narodne novine* (*The People's Newspaper*) in 1843.

Narodni list: glasilo Narodne stranke za Štajersko (Celje) = *The National Journal* was published weekly from October 24, 1906 to July 30, 1914 by the National Party for Styria edited by Andrej Sever and after few numbers by Vekoslav Špindler in 1906-1914.

La Nature = La Nature. Revue des Sciences et de leurs applications aux arts et à l'industrie (Paris), in 1873 founded by Gaston Tissandier, in 1972 absorbed by the journal *La Recherche.*

Nucl. Instrum. Methods. = *Nuclear Instruments and Methods in Physics Research.*

Obzornik mat. fiz. = *Obzornik za matematiko in fiziko* (Review of mathematics and physics), Ljubljana.

Odmevi: literarno-kulturna revija (Echoes) = Published quarterly in Ljubljana by Radivoj Peterlin-Petruška until second volume fourth number in 1929-1933.

Official gazette of the United States Patent Office. Washington: The Patent Office, 882 volumes published in 1872-1971.

Österreichisches Patentblatt. Teil 2, Patentanmeldungen published by Vienna: Lorenz from 1899 as yearly of the Austrian Patent Office (Österreichische Patentamt) which started its work in Vienna on January 1, 1899.

Pagine istriane established in 1902 and first printed in next year by Koper: Cobol & Priora, edited by Priora, Carlo, directed by Venturini, Domenico.

Patentblatt Bekanntmachungen auf Grund des Patentgesetzes und des Gesetzes betreffend den Schutz von Gebrauchslnustern Herausgegeben vom Reichspatentamt, Berlin, published after the foundation of the Imperial Patent Office in 1877.

Phys. Bl. = *Physikalische Blätter* was the official journal of the *Deutsche Physikalische Gesellschaft*. It was founded in 1943 by Ernst Brüche, who was also the editor from 1944 to 1972. After December 2001 it was replaced by *Physik Journal*.

Phys. Rev. = *Physical Review* was established in 1893 published by the *American Physical Society (APS)*. In July 1958, the sister journal Physical Review Letters was introduced to publish short articles of particularly broad interest, initially edited by George Lockwood Trigg, who remained as editor until 1988.

Phil. Trans. = *Philosophical Transactions of the RS*, during R. Hooke's Secretariat in 1677-1683 it was temporarily renamed *Philosophical Collections*.

Phys. Z. = Physikalische Zeitschrift (Physical Journal) published from 1899 to 1945 by S. Hirzel Verlag in Leipzig.

Pogg.Ann. = see *Ann. Phys.*

Pressburger Zeitung = published in Bratislava (Pressburg, Preßburg) twice a week from 1764 and daily form 1848 to 1929.

Primorski slovenski biografski leksikon edited by Martin Jevnikar and published by Gorica: Goriška Mohorjeva družba in 1974-1994.

Proc. IEEE = The Institute of Electrical and Electronics Engineers, Inc. USA = IEEE proceedings.

Rad (Work) = *Rad* Jugoslovenske akademije Znanosti (*Work* of Yugoslavian academy of Sciences), Zagreb.

Rang- und Einteilungsliste der k. u. k. Kriegsmarine = Austro-Hungarian Monarchy. Marine-Section. Wien: Staatsdruckerei. Published in 1907-1915.

The Repertory of Patent Inventions: and Other Discoveries and Improvements in Arts, Manufactures, and Agriculture; Being a Continuation, on an Enlarged Plan, of the Repertory of Arts & Manufactures, a work originally undertaken in the year 1794, and still carried on, with a view to collect, record, and bring into public notice, the useful inventions of all nations. 1784-1825-1862. First volume published in January 1894. The last 16 volume numbers 11-12 printed in December 1909 as monthly of Bosnian government (Zemaljska vlada Bosne i Hercegovine).

Tagesbote für Untersteiermark Organ der liberalen Partei = Maribor daily of local liberal party published from 1871 to 1945.

Technische Blätter: Zeitschr. d. Deutschen Polytechnischen Vereins in Böhmen (Deutscher Polytechnischer Verein in Böhmen), volume 1 (1869) – volume 50 (1918).

Tentzel, Wilhelm Ernst. 1689–1698. *Monatliche Unterredungen einiger guten Freunde von allerhand Büchern und andern annemlichen Geschichten; allen Liebhabern der Curiositäten zur Ergetzligkeit und Nachsinnen heraus gegeben von (Wilhelm Ernst Tentzel = A. B.),* Thorn: Laurer / Leipzig: Gleditsch & Thomas Fritch. About Philipp Lohmeier in the issue of September 1697 on p. 766.

Vakuum-technik printed in Idstein/ Taunus/ Berlin by Rudolf A. Lang. Published by: Deutscher Arbeitskreis Vakuum, Deutsche Arbeitsgemeinschaft Vakuum, Österreichische Gesellschaft für Vakuumtechnik, and Schweizerische Gesellschaft für Vakuumphysik und Technik. Volume 1 printed in 1952, last volume 38 published in 1989.

Vaniček, Alois (ed.). 1859. *Schematismus der österreichischen Gymnasien und Realschulen für das Schuljahr 1858-1859. Herausgegeben von Alois Vaniček k.k. Gymnasiallehrer in Olmütz*. Olmütz: A. Halauska. Continuation: 1860. *Schematismus der österreichischen Gymnasien und Realschulen für das Schuljahr 1859-60*. Prag: F. Tempsky (SSMULJ-12136).

Verhandlungen der kaiserlich-königlichen zoologisch – botanischen Gesellschaft in Wien = Wien: Zoologisch-Botanische Gesellschaft & W. Braumüller. 1852-1915. Later after 1918 just *Verhandlungen der Zoologisch-Botanischen Gesellschaft in Wien*.

Verordnungsblatt für den Dienstbereich des k.k. Ministeriums für Kultus und Unterricht. Jahrgang ... Wien: Staatsdruckerei = Yearbook of Habsburgian State Ministry of Religion and Education published in 1869-1918/1919.

Viet = Voprosy istorii estestvoznanija i tekhniki (Institut istorii estestvoznanija i tekhniki edited by Akademija nauk SSSR (*Вопросы истории естествознания и техники,* институт истории естествознания и техники. Академия наук СССР, *Studies in the History of Science and Technology*), established in 1980, now edited by Russian Academy of Science (Российская академия наук (РАН) & ИИЕТ РАН).

Wien. Anz. = Anzeiger der (Kaiserlichen) Österreichischen Akademie der Wissenschaften, Mathematisch-Naturwissenschaftliche Klasse.

Wien. Ber. = Wiener Sitzungsberichte der kaiserlichen Akademie der Wissenschaften in Wien (established in 1848).

Denkschriften der Kaiserlichen Akademie der Wissenschaften. Mathematisch-naturwissenschaftliche Klasse.

Wien.Klin.Wschr. = Wiener klinische Wochenschrift, the Central European Journal of Medicine established in Vienna by Gesellschaft der Ärzte in 1888.

Wiener Zeitung = Wiennerisches Diarium in 1780 renamed to *Wiener Zeitung* (*Viennese newspaper*).

Wochenversammlung des Architekten- und Ingenieur-Vereines in Böhmen. Paper read there at

weekly meetings (Vortrag gehalten in der Wochenversammlung) mostly published in *Technische Blätter (Zeitschrift des Deutschen Polytechnischen Vereins in Böhmen (Deutscher Polytechnischer Verein in Böhmen)): Vierteljahrschrift des Deutschen Ingenieur- und Architekten-Vereines in Böhmen* (*Zprávy spolku architektů a inženyrů*) in Prague in 1869-1919.

Wochenversammlung des österreichischen Architekten- und Ingenieurvereines (Ingenieur- und Architekten-Vereins, Zprávy spolku architektů a inženyrů, ÖIAV). Paper read there at weekly meetings (Vortrag gehalten in der Wochenversammlung) mostly published in Zeitschrift des österreichischen Ingenieur- und Architekten-Vereines (1876-1891 called *Wochenschrift des österreichischen Ingenieur- und Architekten-Vereines*, later renamed to Österreichische Ingenieur- und Architekten-Zeitschrift, ÖIAZ). Volume 50 published in 1898.

Yearbooks (Yearly Journal, Izvestje, Izvešće, Izvješće, Izviešće o kralj. Velikoj gimnaziji u…, Programm, Programma, Jahrsberichte, Jahres-Bericht) of secondary schools = Published almost regularly in Habsburgian Monarchy and elsewhere in Central Europe for Grammar Schools, Real Schools and Trade Academia (Akademie) after 1848.

Zastava (Novi Sad) radical party's local newspaper (*Застава*, *Нови* Сад) editor Jakov Jasha Tomich (Јаков „Јаша” Томић).

Z. öst. Gym. = Zeit. f. österreich. gymn. = Zeitschrift für die österreichischen Gymnasien (mit Beilagen und Supplement, Zeitschrift fuer die Oesterreichischen Gymnasien). Wien: Gerold (initially Wien: C. Seidl). Established in 1850 by J.G. Seidl, Bonitz and J. Mozart. Volumes 1 to 69 published in 1850-1919/20. Index of volumes 1 (1850) to 40 (1889) published by Stejskal in 1891.

Zeitschrift für das Realschulwesen, Wien: A. Holder (established in 1876 by Kolbe, Hoflfmann and Warhanek).

ZMF = Z.Math.Phys. = Zeitschrift für Mathematik und Physik, Organ für angewandte Mathematik. Leipzig: B. G. Teubner, volume 1 appeared in 1856 edited by Oscar Schlömilich until 1896 with occasional assistance of Moritz Cantor, E. Kahl and others. The last volume 64 in 1917.

Z. Phys. = Zeitschrift für Physik (Journal for physics) established in 1920 by Springer Berlin Heidelberg and stopped publication in 1997, when it merged with other journals to form the new European Physical Journal series.

Zora = Zora časopis zabavi in poduku published in Maribor from 1872 to 1878, in last two years edited by Janko Pajk in his Maribor based Pajk’s Narodna Tiskarna.

37.6 Index of Major Important Companies, Businesses, Institutions, Journals , Abbrevations and Lesser-Known Terms

AAAS = American Association for the Advancement of Science.

APUG = Archivo della Pontificia Università Gregoriana, Rome (numbers of film and pages).

AR = Académie Royale des Sciences, Paris.

ARRS = Slovenian Research Agency.

AS = Archives of the Republic of Slovenia in Ljubljana.

ATT = AT&T = The Bell Telephone Company founded by Alexander Graham Bell in 1877 became the American Telephone and Telegraph Company in 1885 and was later rebranded as AT&T Corporation.

AVS = American Vacuum Society.

BAAS = British Association for the Advancement of Science.

Balzers Gerätebau = Anstalt Balzers, Liechtenstein.

Bell Labs = Bell Telephone Laboratories, Murray Hill, New Jersey, USA.

Caltech = California Institute of Techology, Pasadena, California.

Cavendish = Cavendish Laboratory, Cambridge.

CCE = Compagnie Continentale Edison.

DVTS = Society for Vacuum Technology of Slovenia.

EELC = Edison Electric Light Company 125Extrion Extrion, Corp., today Varian SEA.

Fairchild = Fairchild Semiconductor Corporation, Mountain View, California.

FRS = Fellow of the Royal Society.

GE = General Electrics Co., Schenectady (Edison Company).

GEC = General Electric Company, Ltd. GEM General Electric Metallized GME General Micro-Electronics Inc., a subsidiary of Fairchild, founded in 1963.

Heraeus = WC Heraeus Vakuum-Schmelze GmbH in Hanau.

HVEC = High Voltage Engineering Company, USA.

IAEA = Mednarodna agencija za atomsko energijo s sedežem na Dunaju (International agency for atomic energy based in Vienna).

IEVT = Institute for Electronics and Vacuum Technique.

IJS = Institute » Jožef Stefan", Ljubljana.

IMT = Institute of Metals and Technology established in 1948 om Ljubljana to support steel industry; it became a public research institute in 1997.

Intel = Intel Corporation headquartered in Santa Clara, California.

IPC = Ion Physics Corporation, Burlington, Massachusetts, USA.

ITPO = Institute of Surface Technology and Optoelectronics, Ljubljana.

Leybold = in 1851 Leybold & Kothe in Köln, later E. Leybold's Nachfolger (E. Leybold's Successor), in 1967 Leybold Heraeus GmbH, in 1994 Balzers and Leybold Group as ALD Vacuum Technik GmbH (ALD Vacuum Technologies GmbH) with seat in Hanau, then Leybold AG, now Leybold (Vacuum) GmbH.

Mayr = Mayr's offer of books in Ljubljana in 1678 prinredc as *Catalogus Librorum qui Nundinis Labacensibus Autumnalibus in Officina Libraria Joannis Baptistae Mayr*.

MIT = Massachusetts Institute of Technology.

NAS = National Academy of Sciences, USA.

NEK = Nuklearna elektrarna (Nuclear power Plant) Krško.

NUK = The reference codes at National and University Library of Ljubljana.

OFM = Friars Minors, Franciscans.

OP = Dominicans, Ordo Praedicatorum.

OSRAM Licht AG was founded by the merger of the lighting businesses of Auergesellschaft, Siemens & Halske and Allgemeine Elektrizitäts-Gesellschaft in Munich in 1919.

Philips = Philips Corporation, Eindhoven.

Rangaku = Japanese science based on Dutch works which prevailed in Japan after 1720 for a whole century.

RCA = Radio Corporation of America.

RI = Royal Institution, London.

RS = Royal Society with members (fellows) FRS, London.

S. EE = Société Électrique Edison, Paris.

Sematech = Sematech Inc., Austin, Texas.

Shockley Semiconductor Laboratories = Shockley Semiconductor Laboratory in Palo Alto, California, established in 1955, as subordinate to Beckman Instruments, Inc.

SJ = Societatis Jesu, Jesuits.

SM = Slovenian Queen Bee (Slovenska Matica).

SUZUP = Zvezna uprava za napredek proizvodnje (Yugoslav Federal Agency for the Advancements of Productions).

Temescal = Temescal Metallurgical Corporation in California.

TI = Texas Instruments, Inc., Dallas, Texas.

UELC = United Electric Lighting Company, London.

Varian = Vacuum Division of Varian Associates, Palo Alto, California; Varian Ion Implant Systems, Blackburn Industrial Park, Gloucester, Massachusetts.

WE = Western Electrics.

ZAL = Historical Archive, Ljubljana.

ZKNE – Zvezna komisija za nuklearno energijo (Yugoslav Federal Agency for Nuclear Energy).

ZRC SAZU (SRC SASA) = Scientific Research Centre of the Slovenian Academy of Sciences and Arts.

37.7 Index of Noted Important Persons Mentioned (their deaths are designated by † even for people with no Christian background)

A

Alexander Alekhine (Алекса́ндр Алекса́ндрович Але́хин, * 1892; † 1946).

Alexander VII (Fabio Chigi, Aleksander, * 1599; † 1667), the Pope between 1655–1667.

Jean Le Rond d'Alembert (* 1717; † 1783).

Zhores Ivanovič Alferov (Жоре́с Ива́нович Алфёров, 1930 Vitebsk; † 2019 Saint Petersburg).

Hannes Olof Gösta Alfvén (* 1908; † 1995) 243

Francesco Algarotti (* 1712 Venezia; † 1764 Pisa)

Al-Biţrūjī-Alpetragius (Abū Ishāq Nūr al-Dīn al-Bitrūyī, Nur al-Din ibn Ishaq Al-Biţrūjī, * Morocco; † around 1204/1205 Sevilla).

Ghiyāth al-Dīn Jamshīd Masʿūd al-Kāshī (al-Kāshānī, * 1380; † 1429).

Moritz Allé (* 1837, Brno; † 1913).

James Van Allen (* 1914; † 2006).

Pierre Alexandre Joseph Allent (* 1772; † 1837 Paris).

Daniel Alpert (* 1917 Hartford, Conn.; † November 4, 2015 Eugene, Oregon).

Ala al-Dīn Ali ibn Muhammed al-Qushji (* 1403; † 1474).

Hilarius Altobello (Ilario Altobelli, * 1560 Montecchio (Treia) in Macerata; † 1637).

Émile Amagat (* 1841 Saint-Satur; † 1915 Saint-Satur).

Ubiratan D'Ambrosio (* 1932 São Paulo).

Anton Ambschell (* 1751 Györ; † 1821 Bratislava).

Joseph Sweetman Ames (* 1864 Manchester, Vermont in USA; † 1943 Baltimore, Maryland).

Jean-Joseph Maria Amiot (* 1718; SJ; † 1793).

Chrysostomus Amon (baptized Karl Anton. * 1819 Lilienfeld in Lower Austria south of St. Pölten; 1838 Cistercian at Lilienfeld Abbey; † 1889 Lilienfeld), professor of mathematics, physics from 1 September 1850 until 1872, after 1868 director of the Cistercian Neukloster Higher Grammar school at Wiener-Neustadt. From 1865 a correspondent for the Geological Institute and a member of the Austrian Society for Meteorology.

Slavko Amon (* 1945 Ljubljana).

Guillaume Amontons (* 1663; † 1705) 33

Eusebius Amort (* 15 November 1692 Bibermuehle in Bavaria; † 5 February 1775 Polling).

André Marie Ampère (André-Marie, * 1775; † 1836).

André Anders grew up in East Germany and studied physics in Wroclaw, Berlin, and Moscow until his Berliner POhD in 1987. He became a Senior Staff Scientist and the Leader of the Plasma Applications Group at Lawrence Berkeley National Laboratory, Berkeley, California. In 2017 je was appointed Director and CEO of the Leibniz Institute of Surface Engineering in Leipzig, and Professor of Applied Physics at the Felix Bloch Institute of Solid State Physics of the University of Leipzig.

David Leonard Anderson (* 1919 Portland, Oregon; † 1996 Oberlin, Ohio).

Joseph Chapman Anderson (Andy, * 1922; † 2001).

Leland I. Anderson (* October 12, 1928).

Philip Warren Anderson (* 1923 Indianapolis; † 2020 Princeton).

Edward Neville da Costa Andrade (* 1887 London; † 1971).

Rudolf Andrejka noble (plemeniti) Livnogradski (* 1880 Ljubljana; † 1948 Ljubljana).

Pasquale Andreoli (* 1777; † 1837).

Thomas Andrews (* 1813; † 1885).

Niccolò Arnù (Arnu, * 1629 Mirecourt by Verdun in Lorraine or Béziers; Dominican (OP); † 1692 Bologna).

Svante Arrhenius (* 1859; † 1927).

William C. Arsem (P., * 1881 Massachusetts).

Jacques-Arsène d'Arsonval (Jacques-Arséne, * 1851; † 1940).

Valentin Osipovich Arutunov (Aroutunov, Arutyunov, Осипович Арутю́нов, * 1908 the capital of Turkmenistan (Turkmenistan) Askhabad (Ašhabád, Aşgabat) ; † 1976 Leningrad).

Abū Isḥāq Ibrāhīm ibn Yaḥyā al-Naqqāsh al-Zarqālluh, Al-Zarkali, Ibn Zarqala, Arzachel (Arsechieles, * 1029; † 1087).

Johann Arzberger (* 1778; † 1835).

Asada Gōryū (麻田 剛立, * 1734; † 1799).

Albert Paul Aschenbrenner († 1912).

Giuseppe Maria Asclepi (Joseph, * 1706 Macerata in the Marche region; SJ 1 July 1721; † 21 July 1776 Rome).

Augustinus Asenbaum, professor emeritus, University of Salzburg, Department of Materials Science and Physics, History of Science and Technology, flourished 1975-2014.

Eric Albert Ash (* 1928 Berlin).

St. George Ashe (* 1657/1658 county Roscommon in Ireland; † 1718 Dublin).

Isaac Asimov (* 1920; † 1992).

Allen Varley Astin (* 1904 Salt Lake City in Utah; † 1984 Bethesda northwest of Washington, Maryland).

Francis William Aston (* 1877; † 1945).

Mohamed Mohamed Atalla (محمد محمد عطاالله, * 1924 Bur Saʿīd (Port Said) in Egypt; † 2009 California).

Robert d'Escourt Atkinson (* 1898 Rhayader in Wales; † 1982 Indiana).

George S. Attard is a professor of Chemistry at University of Southampton.

Ignaz count Atthemis (Ignaz Maria Maximilian Dismas Joseph Leander Attems, * 1714 Graz; † 1762 Vienna).

Maria Josepha countess Khuen von Belasi zu Auer und Lichtenberg married Attems (* 1721 Hall by Innsbruck; † 1784 Vienna).

Josef Atzl (* 1780; † 1873).

Carl Auer (Karl Auer baron Wiesbach, * 1858 Vienna; † 1929).

Pierre Victor Auger (* 1899; † 1993).

Ernst Ferdinand August (* 1795; † 1870).

Hansjochem Otto Autrum (* 1907 Bromberg; † 2003 München) zoologist, joined the Nazi NSDAP and Sturmabteilung (SA) in 1933.

Max Auwärter (* 1908 Knittlingen; † 1995).
Adrien Auzout (* 1630; † 1691).

France Avčin (* 1910 Ljubljana; † 1984 Ljubljana).

Averroes (Averrois, Averroës, Abu-al-Walid Muhammad ibn Ahmad ibn Rushd, Ibn Rušd, * 1126 Córdoba, Spain; † 1198 Marrakesh, Morocco).

Avicenna (Abu Ali al-Husain ibn Abdullah ibn Sina, * 980; † 1037).

Amedeo Avogadro (* 1776; † 1856).

Refah Mehmet Ayber (* 1921 Turkey).

William Edward Ayrton (* 1847 London; † 1908 London).

Toru Azuma (東徹, * 1953).

B

Joseph knight Baader (* 1763; † 1825).

Baba Sajurō (Sadayoshi, 馬 場 佐 十郎, * 1787; † 1822 Edo).

Charles Babbage (* 1792; † 1871).

John Graham Backus (* 1911; † 1988 Los Angeles).

Otto Back (* 1834; † 1917).

Francis Bacon baron Verulam (* 1561; † 1626) 26

Josip Badalić (* 1888 Deanovec; † 1985 Križ southwest of Zagreb).

Lawrence Badash (Larry, * 1934 Brooklyn, New York; † 2010 Santa Barbara, California).

Luigi Bader (* 1903 Gorizia; † 1993).

Balthasar Baebler (Baldi, * 1880; † 1936).

Lev Baebler (* 1912 Žiri; † 1976).

Baeda Venerabilis (Bede, Beda, * 673 Jarrow in Durham; † 735 Jarrow).

Otto von Baeyer (* 1877 Reichenhall; † 1946 Tutzing)

Otto's father Johann Friedrich Adolf knight von Baeyer (* 1835; † 1917)

Leonard Bagni (* 1593 Pazin; † 1650 Zagreb).

François de Baillou (* abt. 1700 Italy; † 1774 Milano?).

Jean-Sylvain Bailly (* 1736; † 1793).

Alexander Bain (* 1810; † 1877).

John Logie Baird (* 1888; † 1946).

Børge Bak (* 1912; † 22 February 1990).

Thomas Baker (* 1656 Lanchester, Durham; † 2 July 1740 London).

Frederick Collier Bakewell (* 1800; † 1869 North London).

Robert A. Bakish, the president of Bakish Materials Corporation, Englewood, New Jersey established in 1965.

Luka Bakranin (* 2 October 1692, Oštarije; SJ 1712 Vienna; † 4 July 1627, Cadiz/Sevilla).

Josef Balant (Józef, Jožef Walland, * January 28, 1763 Nova vas near Radovljica; March 8, 1818 Gorizia Bishop; August 3, 1830 Gorizia Archbishop; † May 11, 1834).

Bernardino Baldi (* 1553 Urbino; † 1617 Urbino).

Christian Adolph Balduin (* 1632 Döbeln southwest of Leipzig; † 1682 Grossenhain west of Leipzig).

Giovanni Battista Baliani (* 1582 Genova; † 1666).

Françoise Balibar (born Françoise Dumesnil, * 1941 France).

William Ball (* 1561; † 1626).

William Henry Balmain (* 1817 in then British now German Helgoland North Sea island spa; † 1880 Ventnor on English isle of Wright).

Niccolò Bammacari (Bambacari, * Napoli; † 1759/1792).

Friedrich Wilhelm Banneitz (Fritz Banneitz, * 1885 Hameln on Lower Saxony; † 1940 Dresden).

Franci Bar (* December 2, 1901 St. Anton by Trieste; † November 24, 1988 Ljubljana).

Andrei Ivanovich Barancev (Андрей Иванович Баранцев) as Leningrad based author published on history of television in 1982-1986.

Alvaro Alonso Barba (* 1569 Lepe in southwest Spain; † 1662 Potosi in then Spanish Peru, now part of Bolivia).

Hermolao Barbaro (Ermolao, * 1454; † 1493).

John Bardeen (* 1908 Madison; † 1991 Boston).

George F. Barker (* 1835 Charlestown, Massachusetts; † 1910).

Nicolaus Barkey (* 1709 Bremen; † 1788 Der Haag?) obtained Ph.D. to become a professor of Evangelic theology.

Charles Glover Barkla (* 1877; † 1944).

Josep Maria Barnadas (* 1941 Alella in province of Barcelona; † 2014 Cochabamba in Bolivia).

bishop Carlo Battista Barletti (* 1735, Roccage in Allessandria province; † 1800).

Peter Barlow (* 1776; † 1862).

Jakob Barner (Barnerus, pseudonym Philiater, * 1641; † 1686).

Émile Georges Barrillon (* 1879 Mézières in Ardennes; † 1967 Montreuil-sous-bois).

Ludwig Barth von Barthenau (* January 17, 1839 Rovereto in Trentino; † August 3, 1890 Vienna).

Erasmus Bartholin (* 1625; † 1698).

Thomas Bartholin (* 1616; † 1680).

Josef Bartl (* 1850 Friesach north of Klagenfurt; † 1925 Graz).

Vladimir Bartol (* 1903 Trieste; † 1967 Ljubljana) wrote his novel *Alamut* in 1938 as the most popular work of Slovene literature worldwide.

Adolfo Guiseppe Bartoli (* 1851; † 1896).

Daniello Bartoli (Bartolis, * 1608; † 1685).

Thomas J. Barton (* 1940 Texas, coast of Mexico Gulf).

Charles Baskeville (* 1870 Deerbrook, Mississippi; † 1922 New York).

Nikolaj Gennadievich Basov (* 1922).

Laura Bassi (* 1711; † 1782).

Franjo Baš (* 1899 Kamenče 25 km west of Celje in Styria; † 1967 Ljubljana).

Gordon Battelle (* 1883; † 1923).

Abbé Charles Batteux (* 1713 Alland'Huy-et-Sausseuil, Ardennes; † 1780).

Martin Baucher (* 1594; † 1668).

Alexander Anton Bauer (Sandor, * 1836 Altenburg (Mosonmagyaróvár); † 1931 Vienna).

Jean-Geoffroy Bauer († 1783).

Otto Baumbach (* 1882 Niederwilligen in Thuringia; † 1966 Alkrington, UK).

Antoine Baumé (* 1728; † 1804).

Andreas baron Baumgartner (* 1793 Frymburk in the Český Krumlov region; † 1865).

Arthur de Bausset (* 1828 France; † 1905 New York).

Teophil (Gottlieb) Siegfried Bayer (* 1694 Bohemian Lands; SJ; † 1738 Petersburg).

Sophia von Bayern-Munich (* 1376; † 1428).

Bahittin Baysal (* 1922 Kırşehir; † 2017).

Vladimir Bazala (* 1901 Zagreb; † 1987 Zagreb).

Jesse Wakefield Beams (* 1898 Belle Plaine in Kansas; † 1977).

Aleš Bebler (Baebler, * 1907; † 1981).

Anton Bebler (* 1937).

Cesare Beccaria (Marquis of Gualdrasco and Villareggio, * 1738 Milano; † 1794 Milano).

Giovanni Battista Beccaria (Beccheria, Giambattista Beccaria, * 1716 Mondovi; Piarist; † 1781 Turin).

Giacomo Bartholomeo Beccari (Iacopo, Jacopo Beccaria, * 1682 Bologna; † 1766 Bologna).

Johann Joachim Becher (* 1635 Speyer, † 1682 London).

Joseph Adam Becker (Joe, * 1897 Saar land; † 1961).

Edmond Becquerel (Alexandre-Edmond, * 1820 Paris; † 1891).

Antoine Charles Becquerel (* 1788; † 1878).

Antoine Henri Becquerel (* 1852; † 1908).

Jean Becquerel (* 1878; † 1953).

Martina Němcová married Bečvářová (* 1971 Pardubice in the Czech Republic 96 kilometres east of Prague).

Kazimir Bedeković Komorski (* 1727; SJ 1742; † 1782).

Ambrož Bedenčič (OFM; † April 4, 1750 Kostanjevica).

Wilhelm Beetz (* 1822; † 1886).

William W. Behrens III, son of the Vice Admiral William Wohlsen Behrens Jr. (* 1922 Newport; † 1986).

András Mechwart de Belecska (Andreas, * 1834 Schweinfurt; † 1907 Budapest).

Bruno Belhoste (* 1952 France).

Andrej Belič

Igor Belič (* 1919 Berlin, † 1997 Ljubljana).

Igor Belič (* 1960).

Iuriĭ Aleksandrovich Belii (Belyĭ, Юрий Александрович Белый, * abt. 1920 Dnepropetrovsk (Днепропетровск, Dnipro, Дніпро) in Ukraine).

Ivan Filipovich Beljanski (Иван Филиппович Белянский, * 1907; † 1979).

Alexander Graham Bell (* 1847; † 1922).

Angelo Bellani (* 1776 Monza; † 1852 Milan).

Manfredo Bellati (* 1848 Feltre in Belluno; † 1832 Feltre).

Giuseppe Belli (* 1791; † 1860).

Zvonko Benčić (* 1940 Senj).

Giannbattista Benedetti (Benedictis, * 1530 Venezia; † 1590 Torino).

Pope Benedict XIII (Benedictus XIII, born Pietro Francesco Orsini, later called Vincenzo Maria Orsini, * 1649; † 21 February 1730) was a pope from 29 May 1724 to his death.

Benedict XIV (Benedictus XIV, born Prospero Lorenzo Lambertini, * 31 March 1675; † 3 May 1758) was a pope from 17 August 1740 until his death.

Giovanni Batista de Benedictis (* 1622; † 1706).

Julija Pauer married Benesch (* Ljubljana).

Ladislav von Benesch (* 1845 Slavkov; † 1922 Vienna).

Ivan Benigar (* 1845 Trnovo by Ilirska Bistrica; † December 20, 1920 Radeče by Zidani Most).

Abraham Bennet (* 1749; † 1799).

Willard Harrison Bennett (* 1903; † 1987).

Michel Benoist (Benoît, Tsiang Yeou-Jen Tö-Yi, * October 8, 1715 Dijon; SJ Mach 19, 1737 Nancy; arrived in Beijing on July 12, 1744; † October 23, 1774 Beijing).

Carlo Benvenuti (Karl, * 1716; SJ; † 1789).

Seymour Benzer (* 1921 Brooklyn; † 2007 Pasadena).

Jacques Étienne Bérard (* 12 October 1789 Montpellier; † 1869 Montpellier).

Laurent Béraud (* 1703 Lyon; SJ; † 1777 Lyon).

Aristide Bergès (* 1833; † 1904**).**

Tobern Bergman (* 1735 Katrineberg; † 1784 Medevi).

Sigmund Bergmann (*1851 Tennstedt; † 1927 Berlin).

Emil Berliner (* 1851; † 1929).

Henri Bernard (before 1948 Henri Bernard-Maître, * 1889 Chalons-sur-Marne in France; † 1975 Chantilly in France).

Francè Bernik (* 1927 Zapuže by Ljubljana, † 2020 Ljubljana).

Natan Bernot (* 1931 Ljubljana; † 2018).

Johann Bernoulli (* 1667; † 1748).

Daniel Bernoulli (* 1700; † 1782).

Miles Berry, civil engineer, patent agent, and mechanical draftsman of a firm (John) Newton, Son & Berry in 1803-1843. Before 1817 they operated at 97 Chancery-lane, London and afterwards at 66 Chancery-lane, London.

Marcelin Berthelot (* 1827; † 1907).

Louis-Alexandre Berthier later marshal 1st Prince of Wagram Sovereign Prince of Neuchâtel (Neuschatel, * 1753; † 1815).

Claude-Louis Berthollet (* 1748, Talloires, Savoy, France; † 1822 Arcueil).

Louis Alfred Berthon (* May 25, 1838 Choisy-le-Roi, Val-de-Marne in the southeastern suburbs of Paris) Berthon associated with Tivadar Puskás Hungarian engineer and inventor who after studying law in Vienna, studied engineering at the University of Budapest. Tivadar emigrated in London in 1866, then in 1873 went to work in the United States, where he collaborated with Thomas Edison and his team, to create the "Telegraph Exchange", a multiplex which led to the construction of the first manual experimental center, it was inaugurated by the Bell Telephone Company in Boston in 1877. In February 1878, in collaboration with Edison, he introduced the phonograph to Europe and then decided to settle in Paris. After the Parisian world fair of 1878, he came closer to Josuah Franklin Bailey who represented the interests of Elisha Gray. The two men team up with Georges Alexis Godillot who gave them the capital necessary to create a new company. In return, the latter imposed one of his young engineers, Louis Alfred Berthon, for the post of technical director of A. Berthon et Compagnie, known as Edison Telephone Company. Later Berthon became the director of Parisian Société Industrielle des Téléphones (former Société Générale des Téléphones) and commercialized first French telephones in 1892/1893.

Gasparo Berti (* about 1600; † 1643).

Joseph Étienne Bertier (Berthier, * 1702/1710 Aix-en-Provence; Oratorian priest; † 1783 Paris).

Henri-Léonard-Jean-Baptiste Bertin count de Bourdeilles (* March 24, 1720 Périgueux; † 1792 a health resort called Spa in then Habsburgian Belgium).

count Henri Gatien Bertrand (* 1773 Châteauroux; † 1844).

Louis Bertrand (* 1731; † 1812).

Jöns Jakob Berzelius (* 1779; † 1848).

Anthony Bessemer (* 1758 London; † 1836).

Henry Bessemer (* 1813 Charlton; † 1898 London).

Hans Albrecht Bethe (* 1906 Strasbourg; † 2005 Ithaca, New York).

Jesse Oatman Betterton (* 1884 Porter County, Indiana; † 1960) earned a B.S. in Metallurgical Engineering at Rapid City South Dakota School of Mines in 1909 which enabled his Betterton–William Justin Kroll's industrial process for removing bismuth from lead in 1937.

François Sulpice Beudant (* 1787 Paris; † 1850 Paris).

Robert Thomas Beyer (* 1920 Harrisburg in Pennsylvania; † 2008).

Bhaskara II (* 1114; † 1185).

Jacob Franz von Bianchi (Giacomo Bianchy, Jacques, * 1732 Pognana by Como in then Habsburgian Lombardy now in Italy; † 1785 Paris), instrument maker, teacher of experimental physics at universities and at noble palaces in Mannheim, University Tübingen, Vienna, and Paris.

Francesco Bianchini (* 1662; † 1729).

Giovanni Fortunato Bianchini (Bianchi, * 1719 Chieti; † 1779 Padova).

Bartolomeo Biasoletto (* 1793 Vodnjan (Dignano) in Istria; † 1858/1859 Trieste).

Hermann Ignaz Bidermann (* 1831 Vienna; † 1892 Graz).

Shelford Bidwell (* 1848; † 1909 Weybridge in greater London).

Franz Bindlechner (* 1820; † 1897).

Gerd Binning (* 1947 Frankfurt).

Gustav Binswanger (Bynge, * 1855; † 1910 Hampstead in London).

Niccolo Bion (Nicolaus, * 1652; † 1733 Paris).

Jean-Baptiste Biot (* 1774; † 1862).

Olaf Kristian Birkeland (* 1867; † 1917).

John Betteley Birks (* 1920; † 1979 Cambridge), researched the organic scintillations at Manchester University in 1957-1979.

Dr. Philip W. Bishop was a head curator in the Division of Manufacturing at the National Museum of History and Technology, now known as the National Museum of American History, until his retirement in 1972.

Gottlieb Leopold Biwald (* 1731 Vienna; † September 8, 1805 Graz).

Joseph Black (* 1728; † 1799).

Patrick Mainars Stuart Blackett (* 1897; † 1947).

Otto Bernard Blackwell (* 1884 Bourne; † 1970 Sands Point).

Sigismund Anton Joseph Ursini Count of Blagaj (Blagay, * 1686; † 4 April 1755).

Henri Marie Ducrotay de Blainville (* 1777 Arques, near Dieppe; † 1850), a French zoologist and anatomist.

Lucien Ira Blake (J. Black, * 1854 Massachusetts; † 1916).

Jean Pierre François Blanchard (* 1753; † 1809).

Isidor Blanchi (* 1733 Cremona; Camaldolese monk; † 1807).

Pietro Blaserna (* 1836; † 1918).

Ottó Titusz Bláthy (* August 11, 1860 Tata; † September 26, 1939 Budapest).

John Paul Blewett (* 1921; † 2000).

Marta Blinc (* 1904; † 2000).

Robert Blinc (* 1933 Ljubljana; † 2011).

Felix Bloch (* 1905; † 1983).

Catharine Burr Blodgett (* 1898 Schenectady, New York; † 1979 Schenectady, New York).
Prosper-René Blondlot (* 1849; † 1930).

Johann Georg Ludolph Blumhof (* 1774 Hannover; † 1825 Giessen).

Marie Boas Hall (* 1919 Springfield in Massachusetts; † 2009).

Carl Wilhelm Bockmann (* 1773; † 1821 Karlsruhe).

Ludwig Karl Boehm (Böhm, * 1859 Lauscha in Thuringia; † after 1907 East Coast of USA).

Jan Hendrik DeBoer (* 1899 Ruinen east of Amsterdam; † 1971 The Hague).

Jan de Boer (* 1911 Haarlem west of Amsterdam; † 2010 Doorn).

Herman Boerhaave (* 1668; † 1738) 38

Alexander Aleksandrovich Bogdanov (Алекса́ндр Алекса́ндрович Богда́нов Малінóўскі, * 1873; † 1928).

Aleksej Nikolaevič Bogoljubov (Алексей Николаевич Боголюбов, * 1911 Nizhyn (Нежин) in Ukraine; † 2004 Kiev (Киев)).

Henricus Bohemus († after 1440).

David Joseph Bohm (* 1917 Pennsylvania USA; † 1992 Hendon UK).

Johann Conrad Bohn (* 1831 Bornheim district of Frankfurt; † 1897).

Niels Hendrik David Bohr (* 1885; † 1962).

Paul Émile Lecoq de Boisbaudran (* 1838; † 1912).

Ferdinand François Désiré Budan de Boislaurent (* 1761 Haiti; † 1840 Paris).

Etbin Bojc (pseudonym Janez Poljanec, * 1906 Vače; † 1975, Ljubljana).

Slavko Bokšan (Славко Бокшан, * 1889 Đurđevo (Ђурђево) in Serbian Vojvodina; † 1953 Beograd).

Werner von Bolton (* 1868; † 1912) 85

Arthur Boltzmann (* 1881; † 1952).

Ludwig Boltzmann (* 1844; † 1906).

Jacques-Christophe Valamont de Bomare (* 1731; † 1807).

Guido Bonatti (* 1210; † 1296).

Josip Boncelj (* 1884 Železniki; † 1971 Zagreb).

Janez Bonča (* 1960 Ljubljana).

Probir Kumar Bondyopadhyay (Bondy), forensic historian of science and technology in Houston, owner of USA patents.

Ivo Bonelli (OFMobs; † September 22, 1809 Ljubljana).

Emil Bönnelyck (Bonnelyck, * 1893; † 1953).

Lucio Bonora, presbyter at the Diocese of Traviso in Veneto ordained on February 19, 1977.

Harry Boot (* 1917; † 1983).

Hubert Cecil Booth (* 1871; † 1955 Croydon in south London).

Karl Boranga (* 1640; SJ; † 1684).

Johann Albert Wilhelm Borchers (* 1856 Goslar; † 1925 Goslar)

Jean-Charles chevalier de Borda (knight, * 4 May 1733; † 19 February 1799).

Frédéric Bordas (* 1860; † 1936).

Gail Borden, Jr. (* 1801 Norwich, New York; † 1874 Borden, Texas).

Émile Borel (* 1871 Saint-Affrique, Midi-Pyrénées; † 1956 Paris).

Giovanni Alfonso Borelli (Joseph Alphonso, * 1608 Napoli; † 1679 the school of Piarists in Rome).

Vasilij Petrovič Borisov (Василий Петрович Борисов, * 1937 Oryol (Orel, Орёл) in western Russia) specialist in vacuum technique and historian at Russian academy of sciences.

Curt Borchardt (Kurt Borchardt-Toronto), PhD research on Berliner underground transport at University Erlangen granted on 4 July 1917, published about television in Germany in 1929-1950.

Baron Ignaz Born (* 1742 Karlsberg (Karlsburg, Kapnik) in Transylvania; SJ 1761-1762 as novice in Vienna; † 1791).

Stanislav Antonowitsch Borovik (Borowik Станислав Антонович Боровик, * 1882; † 1958).

Tatjana Fedorovna Borovik-Romanov (Татьяна Фёдоровна Боровик-Романова, Romanow, * 1896 Tomsk; † 1981).

Wiktor-Andrei Stanislawowitsch Borowik-Romanow (Ви́ктор-Андре́й Станиславович Борови́к-Рома́нов, * 1920 Leningrad; † 1997).

Bodo von Borries (* 1905 Herford; † 1956 Aachen), married Hedwig Ruska as brother-in-law and institute collaborator of Ernst Ruska.

Tomo Bosanac (* 1918 Bjelovar; † 2003 Zagreb).

Jagadish Chandra Bose (* 1858; † 1937).

Johann Andreas Bose (* 1626; † 1674).

Luigi Bossi (count, a son of marquis, * 1758 Milano; † 1835 Milano).

Nicolaus Bossicart (Bossicar, * 1739; SJ).

Rudjer Josip Bošković (Rudžer, * 1711; † 1787).

James Thomson Bottomley (1845 Fort Breda in Ireland-1926 Glasgow), Kelvin's nephew.

Johan Nepomuk Bottoni (* 1707; † 1790 Krems).

Pierre Bouguer (* 1698 Bretagne; SJ; † 1758).

Nicolas-Antoine Boulanger (* 1722; † 1759)

Bouliguine (Николай Павлович Булыгин, * 1847 Petersburg; † 1912 Crimea).

Ismaël Boullualdi (Bullialdi, * 1605; † 1694).

Henrique Count Chambord, Duke of Bordeaux of Bourbon house (* 29 September 1820; † 24 August 1883 Viennese Neustadt).

king Charles (Karl) X Bourbon (* 1757 Versailles; king from 1824 until 1830; † 1836 Gorizia).

Ludvik XIV (Louis Bourbon, * 1636; king in 1643; † 1715).

king Ludvik XVI (Louis Bourbon, Ludwig, * 1754; † 1793).

king Louis XVIII Bourbon († 16 September 1824).

Eugène Bourdon (* 1808 Paris; † 1884 Paris).

Karl Ludwig Hummel de Bourdon (* 1769 Besançon in France, † 23. April 1840 Leopoldstadt 9 (2, Obere Donaustraße 81, today Numbers 93-95).

François Bourgeois (Francis Burgeois, Tch'au Tsuen-Sieu, Tsi-Ko, * March 21, 1723 Pulligny (Meurthe) in Lorraine; SJ September 17, 1740 Nancy; † July 29, 1792 Beijing).

Robert W. Bower (* 1936 Santa Monica).

Brian Bowers (* abt. 1942 UK) obtained his PhD at Kings College London, formerly Senior Consultant of Electrical Engineering (Lighting and Electric Power) at the Science Museum, London, UK, later consulted on many museum projects in Britain and overseas.

John Zimmerman Bowers (* 1913 Catonsville, Maryland; † 1993 Harrogate healthcare center in Lakewood, N.J.)

Robert Boyle (* 1627; † 1691).

Richard Boyle, first Count Cork (* 1566; † 1643)

Michel Boym (* 1612; † 1659).

Jean Gabriel Boyvin (* 1605 Vire in Normandy; OFMobs; † 1681 Vire).

Cyrus Fogg Brackett (* 1833 Parsonfield, Maine; † 1915).

James Bradley (* 1693; † 1762).

Tycho Brahe (* 1546; † 1601 Prague).

William Henry Bragg (* 1862; † 1942).

William Lawrence Bragg (* 1890; † 1971).

Elena Brambilla (* 1942 Milano; † 2018 Milano).

Benjamin Bramer (* 1588 Felsberg; † 1652 Ziegenhain).

William Thomas Brande (* 1788; † 1866) 235

Georg Friedrich Brander (* 1713 Regensburg; † 1783 Augsburg).

Hennig Brandt (Brand, * around 1630 Hamburg; † 1710 Hamburg).

Arno A. Brasch (* 1910 Berlin; † 1963 New York City).

Mijo Brašnić (* 1849; † 1868).

Walter Houser Brattain (* 1902 Xiamen (Amoy) at southeast China coast; † 1987 Seattle).

Carl Ferdinand Braun (Karl, * 1850 Fulda; † 1918 New York).

Auguste Bravais (* 1811; † 1863).

Abraham-Louis Breguet (* 1747 Neuchâtel (Neuenburg) in western Switzerland; † 1823 Paris).

Louis Bréguet (* 1804; † 1883).

Johann Friedrich August Breithaupt (* 1791 Probstzella; † 1873 Freiberg).

Ivan (Miloš) Brelih (Mihael, Mitja, * 1916 Trebnje; † 2002 Ljubljana).

Louis George Oudard Feudrix de Bréquigny (* 1714 Granville, Manche in Normandy; † 1795 Paris).

David Brewster (* 1781; † 1868).

Annibale Briganti (* about 1520 Chieti; † 1582 Chieti).

Arthur Aaron Bright junior (* 1917; † 1953) received his PhD at Amos Tuck School of Administration and Finance in 1940. Based in New England worked for Department of Economics and Social Science of MIT.

Josip Brigido von Brezovica (* 1736, Trieste; † 1817, Vienna).

Gervais Brisacensis (* 1648 Breisach; OFMCap; † 1717).

Mathurin Jacques Brisson (* 1723; † 1806).

Fortunatus Brixianus (Brixia, Brixanus, Girolamo Ferrari, * * 1701 Brescia; 1718 OFMConv Borno by Brescia; † 1754 Madrid).

Max Brod (* 1884; † 1968).

Roger Lord Broghill, first Count Orrery (* 1621; † 1679).

Louis de Broglie (* 1892; † 1987).

Maurice de Broglie (* 1875; † 1960).

Alexandre Brongniart (* 1770 Paris; † 1847 Paris).

Otto von Bronk (* 1872 Gdansk; † 1951 Berlin).

Lord William Brouncker (* 1620; † 1684).

Andrew Philip Brown (* 1950 London, England), immigrated to the United States to join Harvard in 1990.

Edward Brown (Browne, * 1644 Norwich in Norfolk; † 1708).

Sanborn C. Brown (* 1913 Beirut; † 1981 Henniker, N.H.).

William Charles Brown (* 1927).

Jan Brozek (Joannes Broscius, * 1585; † 1652 Bronowice in Krakow).

Ernst Carl Reinhold Brüche (* 1900 Hamburg; † 1985 Mosbach in the northern Baden-Württemberg).

Ernst Wilhelm Ritter von Brücke (* 1819 Berlin; † 1892 Vienna).

Urban Friderick Benedict Brückmann (* 1728; † 1812).

Luigi Valentino Brugnatelli (* 1761 Pavia; † 1818 Pavia).

Charles Francis Brush (* 1849 Euclid, Ohio; † 1929).

Stephen George Brush (* 1935 Orono in Maine).

Stephen S. Brush (* 1929).

Spiridon Brusina (* 1845; † 1908).

Ferdinand Brusotti (* 1837; † 1899 Pavia).

Harry Brynielsson (* 1914 Stockholm; † 1995 Vaxholm).

Hans Buchner (* 1850; † 1902).

Oliver Ellsworth Buckley (* 1887 Sloan, Iowa, United States; † 1959, Newark, New Jersey).

Vesna Bučić (* 1926 Zagreb, Croatia).

Pavel Budimir (Budnovich, Budnović, * Cetinje; OFMobs; † April 3, 1670 Pičen in Istria).

Gersh Itskovich Budker (Герш Ицкович Будкер, Andrey Mikhailovich, * 1918 Murafa in Ukraine; † 1977 Akademgorodok).

Heinrich Buff (* 1805; † 1878).

Count Georges Louis Leclerc de Buffon (* 1707; † 1788)

Zmago Bufon (Zmagoslav, * 1910 Rojan by Trieste; † 1973, Ljubljana).

Sara Chapman Thorp married Bull (* 1850 Upstate New York; † 1911 Cambridge, Massachusetts), promoter of Jagadish Chandra Bose's inventions, a disciple of Swami Vivekananda like Tesla.

Barbara Hamilton Bunce (* 28 March 1925 Pennsylvania, United States; † 27 July 1991 Oberlin, Lorain, Ohio) married the Oberlin college professor of British parliamentary and legal history of the 19th century Barry McGill (* 1924; † 1996).

Michele Francesco Buniva (* 1761; † 1834).

Robert Wilhelm Bunsen (* 1811; † 1899).

Rointan Framroze Bunshah (Ron, * 1927 Bombay (Mumbai) in India; † 1999 Los Angeles?).

Aleš Bunta (* 1974 Ljubljana), Slovenian philosopher.

Hans Hugo Christian Bunte (* 1848 Wunsiedel; † 1925 Karlsruhe).

Emanuel Bunzel (* 1828 Prague).

Tytus Liwius Burattini (* 1617; † 1681).

Cecil Reginald Burch (* 1901 Leeds; † 1983).

Francis Parry Burch (* 1899; † 1933).

George James Burch (* 1852; † 1914).

Gregor Burdun (Bourdoun, Григорий Дмитриевич Бурдун, * 1907; † 1980).

Adam baron Burg (* 1797 Vienna; † 1882 Vienna), professor of mathematics at the Viennese University of Technology.

Reinhold Burger (* 1866; † 1954).

Joost Bürgi (Jobst, Jöst, * 28 February 1552 Lichtensteig in Switzerland; † 1632 Kassel).

Johannes Buridanus (Jean Buridan, * abt. 1295; † 1358/1363).

Gualterius Burlaeus (Walter Burley, Gualterus Burleus, * abt. 1274; OFM; † about 1345).

Bishop of Salisbury Gilbert Burnet (* 1643 Edinburgh; † 1715 London).

Laurence Burns (* 1905 Boston, Suffolk County, Massachusetts, USA; † 1972 Lynn, Essex County, Massachusetts, USA), obtained his B.S. at Massachusetts Institute of Technology, Dept. of Electrical Engineering in 1927, published for Massachusetts Institute of Technology, Rogers Laboratory of Physics in 1929-1930, resided in Swampscott, Essex County, Massachusetts while publishing for Sylvania Electric Products Inc., Salem, Massachusetts in 1948-1958.

Moses Burstyn (* 1841 Lvov; † 1908).

Ayhan married Busch (* 1934).

Hans Busch (* 1884; † 1973)

Karl Busch (* 1929 Lörrach).

Vannevar Bush (* March 11, 1890 Everett; † June 28, 1974 Belmont).

Gordon Bussey, published about the history of TV and wireless in 1976-2002

Christoph Heinrich Diederick Buys-Ballot (* 1817; † 1890).

John Byron (* 1723; † 1786).

C

Niccolò Cabeo (Nicolaus Cabeaus, * 1586 Ferrara; SJ; † 1650 Genoa).

August André Thomas Cahours (* 1813 Paris; † 1891).
Louis Paul Cailletet (* 1832; † 1913) 88

Florian Cajori (* 1859 St Aignan by Thusis in the easternmost canton Grisons (Graubünden) in Switzerland; † 1930 Berkeley).

Caelius Calcagninus (Celio Calcagnini, * 1479 Ferrara; † 1541 Ferrara).

Nicholas Joseph Callan (* 1799 Darver between Drogheda and Dundalk north of Dublin; † 1864 Maynooth east of Dublin).

Adolph Carl Peter Callisen (* 1786 Glückstadt in then Danish Holstein of Schleswig-Holstein; † 1866 Wandsbek borough of Hamburg).

Caspar Calvör (Calvoer, * 1650 Hildesheim; † 1725 Clausthal).

Franz Ludwig von Cancrin (Kankrin, * 1738; † 1812).

St. Joannis Cantii (Jan z Kęt, Jan Kanty, * 23 June 1390; † 24 December 1473).

John Canton (* 1718; † 1772 London).

Georg Cantor (* 1845 Sankt Petersburg; † 1918 Halle).

Moritz Benedikt Cantor (* 1829 Mainz; † 1920 Heidelberg).

José Raúl Capablanca y Graupera (* 1888; † 1942).

Philip Caraman (* 1911 Hippodrome in North London UK; SJ; † 1998 Brushford, Somerset).

Archbishop of Ravenna Cardinal Alois Caponio (Luigi Capponi, * 1583 Firenze; † 1659 Roma).

Bruno Carazza, historian of physics, in 2010/213 retired at the Department of Physics and Earth

Sciences University of Parma (Università degli Studi di Parma).

Girolamo Cardano (* 1500; † 1576).

Donald Stephen Lowell Cardwell (* 1919 Gibraltar; † 1998 Macclesfield, Cheshire),

Luigi Aloys Caren (* 1766, Pavia; † 1810, Vienna).

George R. Carey (* 1851 Malden, Massachusetts; † 1906).

Count Gian Rinaldo Carli (Caroelius, * 11 April 1720 Koper; † 1795 Cusano, today in Milano).

Giovan Girolamo Carli (* 1719 Ancaiano (Siena); † 1786 Mantova).

Count Girolamo Carli (* 1726 Koper; † 1791/1793 Milano).

Vincenzo Carnava († 1615).

Lazare Carnot (count, * 1753; † 2 August 1823).

Sadi Carnot (* 1796; † 1832).

Francisco Caro (Francesco Caro, Franciscus Carus, Cari), published 1665-1692 as Somaschi friar professor in Padua.

Ferdinand Philippe Edouard Carré (* 1824 Moislains in Somme; † 1900).

Jean De Carro (* 1770 Geneva; † 1857 Karlovy Vary (Carlsbad)).

Philip Carteret (* 1733; † 1796).

Gallo Cartier (Gallus, * 1693 Pruntrut (Porrentruy) in northwest Switzerland; OSB Ettenheimmünster by Freiburg im Breisgau; † 1757 Ettenheimmünster?).

Paul Carus (* 1852 Ilsenburg, Saxony; † 1919 La Salle, Illinois).

Paolo Casati (* 1617; † 1707).

Vincenzio Cascariolo (Casciriolo, Casciarolo, * 1571 Bologna; † 1624 Bologna).

Abbé Giovanni Caselli (* 1815 Sienna; † 1891 Florence).

Hendrik Brugt Gerard Casimir (* 1909; † 2000).

César Francois Cassini de Thury (Cassini III, * 1714; † 1784).

Dominique Cassini (Giovanni Domenico Cassini I, Jean-Dominique. * 1625 Perinaldo; † 1712 Paris).

Jean-Dominique count Cassini (* 1748; † 1845) son of César-François Cassini de Thury.

Louis Bertrand Castel (Louis-Bertrand, * 1688 Montpellier; SJ 1703; † 1757).

Abbé Benedetto Castelli (* 25 April 1577 Brescia; † 1644).

Davide Castelvecchi, a staff reporter at *Nature* in London and a contributing editor for *Scientific American*.

Giovanni Francesco Melchior Castillon (* 1708; † 1791).

Claude-Nicolas Le Cat (* 1700; † 1768 Rouen).

Joseph de Catharin at Graz University in 1772 related to Sigmund R. Ritter von Katharin († 1778).

Bonaventura Belluto Catanensi (* 1599/1600 Catania in Sicily; OFMconv; † 1676 Catania).

Baron Augustin-Louis Cauchy (* 21 August 1789 Paris; † 23 May 1857).

Louis-François Cauchy (* 1760; † 28 December 1848).

Blanche Mojon married Cavaignac (* 1854; † 1931).

Godefroy Cavaignac (* 1853; † 1905).

Clemente Baroni Cavalcabò (* 1726 Sacco in Trentino; † 1796 Sacco).

Italian Tiberio Cavallo (* 1749; † 1809).

Charles lord Cavendish (* 1704; † 1783).

Henry lord Cavendish (* 1731; † 1810).

Margaret Lucas Cavendish, Duchess of Newcastle-upon-Tyne (* 1623; † 1673).

John Cawley (Calley, * 1663; † May 1725 The Hague).

Robert Cay (* 1807; † 1888).

Jean-André Cazalet (* 1753 Anglès; † 1825 Bordeaux).

Jean Cazenobe (* 1926; † 2014 Paris), director of research at Parisian CNRS.

Barbara of Celje (Cilli, * 1392 Celje; † July 11, 1451).

Friderik II of Celje (* about 1365 Celje; † 1454)

Herman I of Celje (* 1333; † 1385).

Herman II of Celje (* 1365; † 1435).

Margaret of Celje († 1480).

Ulrich II of Celje (* 1406; † November 9, 1456 Beograd).

Conrad Celtes (Celtis, * 1459; † 1508).

Federico Cesi (* 1585; † 1630).

Antonio Cetti (* 1752; † 1835).

Giovanni Ceva (* 1647 Milan; † 1734 Mantua).

Tommaso Ceva

James Chadwick (* 1891; † 1974).

Alexander Chalmers (* 29 March 1759 Aberdeen Scotland; † 29 December 1834 London).

Ephraim Chambers (* abt. 1680; † 15 May 1740 London).

Robert Champeix published in vacuum technique in French language in 1950-1996.

Jean-Étienne Vachier Championnet

Sivaramakrishna Chandrasekhar (* 1930; † 2004).

Subrahmanyan Chandrasekhar (* 1910 Lahore; † 1995).

Octave Chanute (* 1832; † 1910).

Jean Chapelain (* 1595; † 1674).

Jean Antoine Claude Chaptal count de Chanteloup (* 4 June 1756 Nogaret; † 30 July 1832 Paris).

Jacques Alexandre César Charles (* 1746; † 1823).

Charles de Changy (* 1817 Saint-Avertin in France).

Margaret Cheney (* April 5, 1921 Eugene, Oregon in the Pacific Northwest).

Pavel Alekseevich Cherenkov (* 1904; † 1990).

Hai Nei Shih Chou Chi (十州記, Hainei shizhou ji, 海內十洲記, flourished in fourth or fifth-century BCE)

Adam Mathias Chmel (* 1770 Teschen; † 1832 Linz).

Christian Christiansen (* 1843; † 1917).

Nicholas Constantine Christofilos (Νικόλαος Χριστοφίλου, * 1916 Boston; † 1972).

Zhou Chu (Chou-Chum 周處, courtesy name Ziyin 子隱, * 236; † 297).

William A. Chupka (* 1923 Pittston; † 2007).

Morishima Chūryō (Katsurgawa Hosai, courtesy name Shinra Bansō or Nisei Fūrai Sanjin in the meaning of the second Fūtai Sanjin, 森 島 中 良, * 1754; † 1810?).

Pierre-Martial Cibot (* 1727 Limoges, France; SJ; † 1780 Beijing, China).

Marcus Tullius Cicero (* 106; † 43 BC).

Vladislav Cieszynsko-Glogovski († 1463) the son of the Silesian Duke.

Edvard Cilenšek, Strojnik's PhD student of electrostatic Van de Graaff accelerator at Ljubljana Faculty for Electrotechnics and Machine Engineering in 1962-1965.

Gaetano Cioni (* 1760 Firenze; † 1851 Firenze).

Walker Lee Cisler (* 1897 Marietta, Ohio; † 1994).

Kristof from Cividale (Čedad, * 1606; OFMCap 1623; † 5 September 1674).

Ante Cividini (* 1881 Brod Na Kupi; † 1968 Ogulin).

Zorica Civrić (* abt. 1960), Senior Curator of the Museum of Science and Technology in Beograd, former curator at Nikola Tesla Museum in Belgrade in 1988-2007.

Latimer Clark (* 1822; † 1898).

Noel Anthony Clark (* 1940 Cleveland).

Charles Lorenzo Clarke (* 1853 Portland Maine; † 1941 Portland Maine).

Samuel Clarke (* 11 October 1675 Norwich; † 17 May 1729) an Anglican clergyman who translated Newton's Optics into Latin Language in 1706 and polemicized with Leibniz.

André Claude († 1955).

Georges Claude (* 1870 Paris; † 1960 Paris).

Rudolf Clausius (* 1822; † 1888).

Christopherus Clavius (* 1537; † 1612).

Nicholas Clément (Clément-Désormes after his marriage in 1820, * 1779 Dijon; † 1841 Paris).

Jean le Clerc (* 1657; † 1736).

Robert William Cloud (* 20 August 1914 Madison, Indiana), of Massachusetts Institute of Technology.

Carolus Clusius (Charles de L'Écluse, * 1526 Arras; † 1609 Leiden).

Philippus Cluverius (Cluverij, * 1580; † 1622).

Ta-Nehisi Paul Coates (* 1975 Baltimore, Maryland).

count Janez Filip Cobenzl (Johann, † 1697).

baron Joannes Raphael Cobenzl (Kobenzl, * 1571; † 1627).

John Douglas Cockcroft (* 1897; † 1967).

baron Anton Codelli III von Fahnenfeld (* 22 March 1875 Naples; † 26 April 1954 Porto Ronco near Ascona).

Anton Sixtus Rudolf Codelli von Codellisberg, Sterngreif and Fahnenfeld (Sikst, * 21 November 1923).

Ilona von Drasche-Lazar de Thorda married baroness Codelli (Ily Lázár, * 4 May 1904 Budapest).

Karl Anton Codelli (* 17 September 1902; † 17 September 1921).

Karl Jožef baron Codelli von Fahnenfeld (* 1846; † 1878 Pula).

Maria (Miryam) Julie Karoline Rosalie Codelli (* 1874 Pula, Istria; † 1935) fist married Ernst Karl Stadler von Wolffersgrün, next married Ljubljana born Max Samassa.

Rosalia baroness Taufferer married baroness Codelli (Rozalija, * 1852; † 1938 Ljubljana), Karl Jožef's fife, mother of Anton and Miryam

Bernard Leonard Cohen (* 1924 Pittsburgh; † 2012).

Jean-Baptiste Colbert Marquis Seignelak (* 1619; † 1683).

Jacques-Nicolas Colbert (* 1655 Paris; † 1707 Paris) the abbot of Le Bec-Hellouin, Parisian academician in 1678, in 1681-1685 the titular archbishop of Carthage, after 1691 archbishop of the former Pascal's Rouen, the youngest son of the minister Jean-Baptiste Colbert who made Du Hamel the secretary of Academy.

Giuseppe de Coletti (* 1744 Rome; † January 1815 Trieste).

Peter Collinson (* 1694 Hugal Hall in northwest England; † 1768 London).

Prince Maria Colloredo-Walsey (Mary Waldesee, Wallsee, * 1735; † 1818).

Edwin Colpitts (* 1872; † 1949).

Bonaventura Columbus (Columbi, Columbo, Colombo, * abt. 1600 Nice; OFMconv, published 1637-1648).

Federico Commandino († 1575).

Philibert Commerson (* 1727; † 1773).

Arthur Holly Compton (* 1892; † 1962).

Carl Taylor Compton (* 1887; † 1954).

Carleton Thomas Compton (* 1592/1593 Cambridgeshire; SJ 1617; † (1665/)1666 Liège).

James Bryant Conant (* 1893 Dorchester in Boston; † 1978 Hanover in New Hampshire).

Charles Marie de La Condamine (* 1701; † 1774).

Abbot Étienne Bonnot de Condillac (* 1715; † 1780).

Edward Uhler Condon (* 1902 New Mexico; † 1974 Colorado).

Pietro Configliachi (* 1777 Milano; Barnabite priest; † 1844 Cernobbio).

Timothy K. Conley, professor of English at Bradley University.

Johann Michael Conradi († 1742 Dresden).

Antonio Conti (Abbate Schinella Conti, * 1677 Padua; Oratorian monk; † 1749 Padua)

Natale Conti (Natalis Comes, Natalis de Comitibus, Noël le Comte (* 1520; † 1582).

Harold John Cook (* 1952 USA).

captain James Cook (* 1728 Marton-in-Cleveland, Yorkshire, England; † 1779 Kealakekua Bay, Hawaii).

William David Coolidge (* 1873 Hudson, Massachusetts; † 1975).

Nicolaus Copernicus (* 1473; † 1543).

Paul Bruce Corkum (* 1943 Saint John seaport city of the Atlantic Ocean on the Bay of Fundy in the province of New Brunswick, Canada) researches atoms and plasmas in super-intense laser fields at Canadian National Research Council's Steacie Institute, Ottawa.

Melchior Cornaeus (* 1598 Brilon; † 1665 Mainz).

Elena Lucrezia Cornaro Piscopia (Helena Corner, * 1646 Venice; † 1684 Padua) buried after funeral oration of Francesco Caro).

Marie Alfred Cornu (* 1841; † 1902).

Vicenzo Coronelli (* 1650; OFM 1665; † 1718).

Cipriano Coronini (Giovanni, * 1500; † 1597).

Rudolf Antonio Maria Coronini (* 10 January 1731 Gorizia; † 4 May 1791 Gorizia)

Matthias Hunjady Corvinus (Hunyady Korvin, * 1443; † 1490).

Vernon Ellis Cosslett (* 1908; † 1990).

Domenico Cotugno (* 1734, Ruvo di Puglia; † 1822, Naples).

Maurice Marie Alfred Couette (* 1858 Tours; † 1943 Angers).

Ernest David Courant (Ernst, * 1920 Göttingen).

Antoine Augustin Cournot (* 1801 Gray in eastern France; † 1877 Paris).

Jean-Marie-Joseph Coutelle (* 1748; † 1835).

Thomas George Cowling (* 1906 Hackney/Walthamstow in North East London; † 16 June 1990 Leeds), an English astronomer.

Irving B. Crandall (* 1890 Chattanooga, Tennessee; † 1927).

Heinrich Johann Nepomuk von Crantz (* 1722 Roodt-sur-Eisch in Luxenburg; † 1799 Judenburg).

Adair Crawford (1749; † 1795).

Elisabeth T. Crawford (* 1937 Sweden; † 1 April 2004 Fountain Hill, Pennsylvania, United States).

Lorenz Florenz Friedrich von Crell (* 1744 Helmstedt (Helmstädt) in Lower Saxony; † 1816 Göttingen).

August Leopold Crelle (* 1780; † 1855).

John C. Crepeau, professor and dean of undergraduates at Department of Mechanical Engineering of University of Idaho in Moscow, USA.

Charles Critchfield (* 1910 Ohio; † 1994 Los Alamos).

Oswald Croll (* about 1560 Hessen-Kassel; † 25 December 1609 Prague).

Alistair Cameron Crombie (*1915 Brisbane in Australia; † 1996 Oxford UK).

Oliver Cromwell (* 1599; † 1658).

William Crookes (* 1832; † 1919).

James Arnold Crowther (* 1883; † 1950).

Eleonora Maria Rosalia duchesse Crummau Eggenberg married Liechtenstein (princess Eckenberg, duchesse Troppau and Jägerndorf, * 1647; † 1704).

Alessandro Cruto (* 1847; † 1908 Torino).

Janez Baptist Cruxilia (Križnič, * 23 June 1623 Tolmin; † 1684 Klagenfurt).

Ctesibius (Ktesibios, Tesibius, * 285; † 222 BC).

William Cullen (* 15 April 1710 Hamilton; † 5 February 1790 Edinburgh).

Milan Cundev (Милан Цундев, Faculty of Electrical Engineering and Information Techologies, Ss. Cyril and Methodius University, Skopje, Macedonia (FEEIT, ФЕЕИТ, Електротехничкиот факултет, Универзитет Св. Кирил и Методиј-Скопје).

Marie Curie (* 1867; † 1934).

Jože Vid Curk (* 1924 Vipava; † 2017).

Albert von Curtz (Curtius, pseudonym-anagram Lucius Barrettus, * 1600 Munich; SJ 1616; † 19 December 1671 Munich).

Nicholas of Cusa (Nicholas of Kues, Nicolaus Cusanus, * 1401; † 1464), the cardinal.

Edward Lansing Cussler (* 1940) formerly at University of Wisconsin-Madison, now professor of chemical engineering of Minnesota University Twin Cities in Minneapolis and St. Paul.

Franc Cvelbar (France, * 1932).

Uroš Cvelbar (* 1975 Ljubljana).

Grant Konstantinovič Cverava (Грант Константинович Цверава, T͡sverava, * 1911 Akhaltsikhe in southern Georgia (Ахалци́хе); † 1994).

Jerzy Marian Cygan (* 1924 Sobieniach Szlacheckich 38 km south-east of Warsaw; OFMcap; † 2006 Lublin in Lesser Poland).

Josef Czermak (* 1825/26; † 1872).

Paul Czermak (* December 27, 1857 Brno; † 1912 Innsbruck)

Johann Rudolf Count Czernin von Chudenitz (* 1757; † 1845).

Fran Čadež (* 1882; † 1945).

Marijan Čadež (Marjan, * 1912 Gorizia (Gorica); † 2009, Ljubljana).

Albert Čebulj (* 1918 Glarus in Switzerland; † 1995).

Philip Čeferin (Zeferin, Ceferin, * 1630; SJ; † 1666)

Pavel Čech (Cech, * 1944 Sobotka (Saboth) in north central Bohemia), head of the cabinet of medical history (Division-Department of History of Medicine, Dějiny lékařství) at Third Faculty of Medicine in Charles University in Prague (MFKU).

Miha Čekada, IJS.

Mojca Čepič investigates antiferroelectric liquid crystals and liquid crystals formed of more complex molecules at IJS and at Faculty of Education in Ljubljana.

Lavo Čermelj (* 1889; † 1980)

Evgen Černigoj (* 1908 Cesta by Vipavski Križ).

Avrelij Čeuko (OFM; † 16 May 1746 Ljubljana).

Anton Čokl (Tschokl, * Vienna; † 8 February 1779 Ljubljana).

Milan Čopič (* 1925; † 1989).

Ivana Čornejová (* 1950 Prague).

Franc Čuden († 1912).

Bibiana Dobovišek married Čujec (* 25 December 1926 Ljubljana).

Iskra Vasiljevna Čurkina (Vasil’evna, Искра Васильевна Чуркина, * 1931 Moscow).

D

Franc Dabrović (* 1720 Požega; † 1767).

Fernand Dacos (* 1892 Liège; † 1977), by his female ancestors a descendant of Zénobe Gramme.

Žarko Dadić (* 1930 Split).

Louis Daguerre (* 1789; † 1851).

Odd Dahl (* 1898 Drammen in Norway; † 1994 Norway).

His son Per Fridtjof Dahl (* 1932 Washington D.C.; † 2011 Emeryville, California).

Florian Dalham a. Sta. Theresia (* 1713 Vienna; Piarist; † 1795 Salzburg).

André-Louis Danjon (* 1890 Caen; † 1967 Paris).

John Dalton (* 1766; † 1844).

Gabriel Daniel (* 1649 Rouen; SJ; † 1728 Paris).

John Frederick Daniell (Frederic, * 1790; † 1845 London).

Daniel Semenovich Danin born Plotke (Daniil Semenovič, Даниил Семёнович Пло́тке after 1938 known under his pseudonym Да́нин, * 1914 Vilnius; † 2000 Moscow) of prominent intellectual Jewish family of Lithuania. Began as literary criticist, scenario author, and poet. In the middle of political prosecutions, he remembered his pre-war studies of physics to became highly successful populariser of science in 1957-1982.

Rudolf Danninger worked for the Viennese Institute for Radium Research (Institut für Radiumforschung).

Jean Casimir Danysz (Jan Kazimierz, * 1884 Paris; † 1914 Cormicy).

Oliver Darrigol (* 1955 Caudéran now part of Bordeaux in southwestern France).

Darko Darovec (* 1961 Koper).

Charles Robert Darwin (* 1809; † 1882).

Charles Galton Darwin (* 1887; † 1962).

Erasmus Darwin (* 1731; † 1802).

Johann E. Dassenbacher, flourished 1864-1911, in 1864 taught classical languages in Opava (Troppau), in 1874 taught at Český Krumlov (Krumau) real Grammar school, retired as Graz Grammar school professor in 1911.

Anton E. Daul, published on history of technology mostly in Vienna in 1890-1906.

Alexandre Dauvillier (* 1892 Saint-Lubin-des-Joncherets; † 1979 Bagnères-de-Bigorre).

Stephen Davenport (* 1701).

Boris Davidov (Davydov, Борис Иосифович Давыдов (* 1908 Petersburg; † 1963 Moskva).

Amy Davidson (* New York) in 2017 married David James Sorkin in a Jewish ceremony in Manhattan.

John Arthur Davies (* 1927; † 2016 Deep River, Renfrew County, Ontario, Canada).

Clinton Joseph Davisson (* 1881; † 1958).

Humphry Davy (* 1778; † 1829).

Peter Debye (* 1884; † 1966).

Claude François Millet Dechales (* 1621 Chambéry 100 km east of Lyon; SJ 1636; † 28 March 1678 Turin).

Jakob Degen (* 1760 Switzerland; † 1848 Vienna).

Alenka Dekleva married Likar (* 1929 Ljubljana; † 1995).

Janez Dekleva (* 1925 Ljubljana; † 2011).

Robert K. DeKosky (Bob, * 1945 Pennsylvania? (Rocke, 2001, 22)).

Jean-Claude Delamétherie (de la Métherie, * 1734; † 1817).

François-Étienne Delaroche (De la Roche, * 1781 Geneva; † 1813 Paris).

François general Delaroche (* 1775 Ruffec; † 1815 Ruffec).

Joseph Nicolas Delisle (d'Isle, Lisle, * 1688 Paris; † 1768).

Piero Del Negro (* 1941).

Eugène-Anatole Demarçay (* 1852 Paris; † 1903 Paris)

Harry L. Dember (* 1882 Leimbach quart of Mansfeld; † 1943 New Brunswick, New Jersey), as a Jew escaped from Germany in 1933.

Democritus from Abdera (* 470 BC; † 380 BC).

Janez Dencel (Denzl, Dencl), the owner of bell-foundry and smelting-plant in Maribor in 1869-1898 (Zvonarna in livarna g. Janeza Dencel-na in sinova).

Franc Derganc (* 1877 Semič; † 1939 Ljubljana).

William Derham (* 1657; † 1735).

Miksa Déri (Max, * 1854 Bács (Bač in Vojvodina); † 1938 Merano).

John Théophile Désaguliers (* 1683; † 1744).

Paul Quentin Desains (* 1817; † 1885).

René Descartes (* 1596; † 1650).

Veronika von Desenice (Deseniška, Dessnitz, Dessenitz, Desnicze, Teschnitz, Teschenitz, Dessewitz, Hatschen, Kotschee, * Hrvatsko Zagorje; † 1425/1428 castle Ojstrica by Vransko).

Anselm Design (* 1699 Amberg; Augustinian; † 17. December 1772 Ensdorf).

Charles-Bernard Désormes (* 1777 Dijon; † 1862 Verberie).

César Mansuète Desperetz (* 1792; † 1863).

Desprez (Duprez, Du Prez), French priest, flourished 1773-1775 in France.

Jean-Philibert Dessaignes (* 1762 Le Puy-en-Velay; † 1832 Vendôme in central France).

Georges Destriau (* 1903 Bordeaux; † 1960 Paris).

Andrej Detela (* 1949 Ljubljana).

Frančiška married de Toni (* 1859).

Snegulka Detoni married Moljk (De Toni, * 1921 Begunje by Cerknica; † 2016 Ljubljana).

Toni de Toni (Anton, * 1884 Cerknica).

Vincenc de Toni (* 1851 Trelli near Paularo (Paulâr) in Friuli; † 1907 Begunje no. 24, later no. 39).

Vincenc de Toni (* 1899).

Johann Deutz (Jean, * 29 November 1618; † 1673).

Arthur Devis (* 1712; † 1787).

Helen Rose née Banks married Dewar (* abt. 1849; † 1935).

James Dewar (* 1842; † 1923).

Karl Dežman († 11 March 1889).

Serafina Dežman (Serafine, * 29 September 1822 Idrija; † 1896 Ljubljana Prečna ulica no. 6).

Auguste Franziska Dick (née Kraus, * 1910; † 1993 Vienna).

Charles Scott Dickson (* 1850 Glasgow, Lanarkshire, Scotland; † 1922) brother-in-law of James Dewar.

Ernest Charles Scott Dickson (* 1889; † 1944) nephew of James Dewar as a son of Charles Scott Dickson.

William Kennedy-Laurie Dickson (* 1860 Le Minihic-sur-Rance, Brittany, France; † 1935 Twickenham, Middlesex, England) a Scottish inventor who designed an early motion picture camera.

Henry Winram Dickinson (* 1870 Ulverston, Lancashire; † 1952).

James Douglas Hamilton Dickson (* 1849 Glasgow; † 1931), brother-in-law of James Dewar.

Max Dieckmann (* 1882 Herrmannsacker by Stolberg (Harz); † 1960 Gräfelfing).

Bernard Diestel (* 1623 Vipava; SJ; † 1660 China).

Archbishop Cardinal Franciscus de Dietrichstein († 1636).

David L. DiLaura (* abt. 1948), Illuminating Engineer, taught architectural engineering at University of Colorado in Boulder in 1984-2007.

Karl Dillherr (Karel Dillher, * 1710 Vienna; SJ; † 1778 Stein by Krems).

Gjuro Dimić (Ђура Б. Димић, † February 6, 1935 Beograd).

Milan Sergijević Dimitrijević (Милан С. Димитријевић, Sergije, * 1947 Leskovac (Лесковац), Serbia).

Vigilije Dinarić (Vigilij, Vigilio Dinarich, * 1711; † 1 April 1756 Bribir).

Yiwei Y. Ding (* 1963), studied at Iowa State University in 1988-1993, worked for Monsanto in 2008-2015, later became an Ag Formulation Chemist at Nestlé Purina North America, Consumer Goods, St. Louis, MO.

Johann Gottfried Dingler (* 1778 Zweibrücken; † 1855 Augsburg).

Emil Maximilian Dingler (* 1806 Augsburg; † 1874 Augsburg).

Alfred Dinsdale (Dinny, * 1896; † 1974 Pompano Beach, Broward County, Florida).

Anton Krištof Dinzl von Angerburg († 1727).

Janez Adam Gottfried Dinzl von Angerburg (* 9 November 1720 Zgornje Perovo).

Élie Diodatius (Elia, Elias, * 1576; † 1661).

Gennadij Gerasimovich Diogenov (Геннадий Герасимович Диогенов, * 1914 village Ново-Заимское, Ялуторовский уезд Тобольской губернии (Yalutorovsky Uyezd of the Tobolsk Governorate of the Russian Empire); † after 1990), obtained his PhD in chemistry in Irkutsk in 1951.

Paul A. M. Dirac (* 1902; † 1984).

Eulogius Dirmhirn (* 1823 Schärding; † 1887).

Padanius Discorides (Πεδάνιος Διοσκουρίδης, * about 40 Cilicia in modern Turkey; † 90).

Frank Dittmann (* 1960 Leipzig) curator at the Deutsches Museum in Munich since 2005.

Jan Długosz (Ioannes, Joannes, Johannes Longinus, Dlugossius, * 1 December 1415; † 19 May 1480).

Joseph William Doane (Bill) received his Ph.D. in Physics from the University of Missouri-Columbia in 1965 when he became a member of the Kent State University. In 1983 he became director of the Liquid Crystal Institute there.

Jakob Joannes Wenceslaus Dobrzensky de Nigro Ponte (Jakub Jan Vaclav (Wenčeslav) from Černeho Mostu (Schwartzbrug), * 1623; † 1697).

Cornelio August Doelter (Doelter y Cisterich, * 1850 in Arroyo (Puerto Rico); † 1930 Vienna) mineralogist, petrographer and chemist, professor in Vienna as replacement of Gustav Tschermak in 1907-1921.

Daro Dolar (Davorin, * 1921 Kranj; † 2006).

Jaro Dolar (* 1911 Maribor; † 1999 Maribor) librarian and poet.

Mladen Dolar (* 1951 Maribor) a Slovene philosopher, psychoanalyst, cultural theorist, and film critic as Jaro's son.

Sašo Dolenc (* 1973 Ljubljana).

Igor Dolgachev (Dolgačev, Игор Владимирович Долгачев, * 1944 Moscow) a professor of algebraic geometry at Michigan University since 1978.

Karl Dollenz (Dollenc, Dolenz Károly, * 1703 Graz; SJ 1720 Graz; † 1751 Buda) of Carniolan origin according to Marko Pohlina and by Pohlin's data August Dimitz.

Jurij (Georg) Dolinar (* April 19, 1764 Vovče in Poljane valley; † 21 October 1858 Ljubljana).

Tomaž Dolinar (Thomas Dolliner, * 1760 Dorfarje pri Škofji Loki (Dörfern bei Altlack); † 1839 Vienna).

Janez Dolinšek (* 1957 Ljubljana).

Joseph Dollhopff (Dolhopf, * 1717 Vienna; SJ 1732 Vienna; † 1775/1800).

John Dollond (* 1706; † 30 November 1761).

Karl Domalip (Domalíp, * 1846; † 1909).

Josip Franjo Domin (Iosephi Francisci Domin, * 1754; † 1819).

Fran Dominko (* 1903 Vodnjan by Pula; † 1987 Ljubljana).

Vitalian Donati (* 1717, Padova; † 1762).

archbishop of Genoa Giovanni Stefano Donghi (* 1608 Genoa; † 1669 Rome).

Jean-Jacques-Daniel Dony (abbé Dony, * 1759 Liège; † 1819).

Johann Gabriel Doppelmayr (Doppelmeier, * 27 September 1677 Nurnberg; † 1 December 1750 Nurnberg).

Christian Doppler (* 1803; † 1853).

Natalis Doreguzzius (Natale Doregucci), editor and author in Bologna in 1682-1684.

Andrija Dorotić (Andrea Dorotich, baptized Stjepan, * 25 October 1761 Sumartin na Braču (on island Brač); OFM 1785 Ferrara?; 4 September 1837 Sumartin na Braču).

Remigio Samuel Döttler (Remigius, * 7 August 1741 Vienna; Piarist; † 8 April 1812).

Paul Mead Doty (* 1 June 1920 Charleston; † 2011).

Heinrich Wilhelm Dove (* 1803; † 1879).

Ivan Lovro Dragančić von Drachenfeld, probably a son of the ship-captain from Senj.

Henry Draper (* 1837; † 1882).

John William Draper (* 1811 Liverpool; † 1882 New York).

Cornelis Jacobszoon Drebbel (Drebel, * 1572; † 1633)

Camille Edouard Dreyfus (* 1878 Basel; † 1956 Manhattan, New York).

Mildred Dresselhaus (née Spiewak, * 1930 Brooklyn, New York; † 2017 Cambridge Massachusetts) a daughter of Polish Jewish immigrants, the "queen of carbon science", nanotechnologist, the Professor Emerita of physics and electrical engineering at the Massachusetts Institute of Technology.

Paul Karl Ludwig Drude (* 1863; † 1903)

Thomas Drummond (Drumond, * 1797; † 1840).

Raphaël Dubois (* 1849 Le Mans; † 1929).

René Jules Dubos (* 1901 Saint-Brice-sous-Forêt, France; † 1982 New York), microbiologist at the Rockefeller Institute for Medical Research, later renamed the Rockefeller University in New York.

Louis Jules Dubosq (* 1817; † 1886 Paris).

Ferdinand Duchach (Duhač, † 1887).

Charles Benjamin Dudley (* 1842 Oxford, New York; † 1909 Pennsylvania).

Jean Ferapie Dufieu (* 1737; † 1769).

Dominicus Dufort (* 1753).

Corrine Dufour, American inventor from Savannah in Georgia.

Louis Dufresne (* 1890 Bourg-en-Bresse), French car designer.

Nicolas Lenglet Dufresnoy (* 1674; † 1755).

Laurentius Duhan (* 1656 Chartres; † 1726 Verdun).

Henri-Louis Duhamel du Monceau (* 20 July 1700 Paris; † 13 August 1782 Paris).

Jean Marie Constant Duhanel (* 1797 Saint-Malo; † 1872 Paris).

Eugen Dühring (* 1833; † 1921).

Karl Duisberg (* 1861; † 1934).

Pierre Louis Dulong (* 1785; † 1838).

Jean Baptiste André Dumas (* 1800; † 1884).

Johann baron Dumreicher (* 1815 Trieste; † 1880 castle Janušovec northwest of Zagreb near Slovenian border).

Henry Harrison Chase Dunwoody (* 1842 Highland County, Ohio; † 1933 Interlaken, New York), Brigadier General meteorology expert, after his retirement in 1904 vice president of the DeForest Wireless Telegraph Company.

Sebastian Dupasquier (Sébastien, Sebastianus du Pasquier, * abt. 1630; OFMconv Saint Bonaventure province of Lyon; † 1718).

Heinrich Jakob Karl Durege (Durège, * 1821; † 1893).

François Dussaud (Franz, Frantz, * 1870 Stäfa in canton Zurich (or Geneva); † 1953 Paris), private docent at chair in physics and chemistry at the Ecole de Mécaniqie in Geneva, after resettlement to Paris in 1896 established Dussaud company in 1907.

Saul Dushman (* 1883; † 1954)

Louis Dutens (* 1730 Tours; † 1812 London).

Guillaume Duval (Guglielmo du Val, Guillelmus, * about 1572 Pontoise 25 km northwest of Paris; † 1646 Paris).

Freeman John Dyson (* 1923 Crowthorne, United Kingdom; † 2020, Princeton, New Jersey).

James Dyson (* 1947 Cromer, English county of Norfolk).

Otto Dziobek (* 1856 Frankfurt an der Oder; † 1919 Berlin).

Dzou Yen (Zou Yan, Tsou Yen. 鄒衍, * about 305/340 B.C.; † 240/250).

E

George Biddel Eary (* 1801; † 1892).

Simon Eberle (* 1756; † 24 December 1827 Vienna).

Johann Jakob Ebert (* 1737 Wroclaw; † 1805).

Baron Moriz von Ebner-Eschenbach (* 1815 Vienna; † 1898 Vienna).

Michael Eckert (* 1949) studied physics at the Technical University of Munich and received his PhD in theoretical physics from the University of Bayreuth in 1979. Since 1981, he works at the Deutsches Museum in Munich.

Joseph Hilarius von Eckhel (* 13 January 1737 Enzesfeld bei Baden in Austria unter der Enns; † 16 May 1798).

Henry Turner Eddy (* 1844; † 1921).
Arthur Eddington (* 1882; † 1944).

Niels E. Edlefsen (* 1893 Cache, Utah; † 1971 Davis, Yolo, California).

Josef Maria Eder (* 1855 Krems; † 1944 Kitzbühel in Tirol).

Thomas Alva Edison (* 1847; † 1931).

Erik Edlung (* 1819; † 1888).

Prince Janez Ulrich Eggenberg (* 1568; † 1634)

Bernhard Béla Egger (* 1831 Buda; † 1910 Vienna).

Paul Ehrenfest (* 1880; † 1933).

Paul Ehrenfest (the son, * 1916; † 1939).

Felix Ehrenhaft (* 1879 Vienna; † 1952 Vienna)

Henry Ehrenreich (* 1928 Frankfurt; † 2008 Boston) as a Jew emigrated from Germany in 1938 to research at Schenectady, NY in 1955-1963. He became a trustee of the Dibner Institute for the History of Science and Technology, professor at Harvard and Director of Harvard’s Materials Research Laboratory concerned about pollution and climate change, working on the science and the economics of alternative energy sources - especially solar and wind.

Julius Eibel (* 1843), on 31 October 1864 as supplementary teacher at the k.k. Higher Real School (Oberrealschule) in Klagenfurt came to Stockerau by Vienna as an associate teacher, tested for Higher Real Schools (Oberrealschulen). He taught arithmetic, geometry and geometric drawing in tha man with his name lived in Vienna.

Georg Christoph Eimmart (* 1638; † 1705).

Andreas Einspieler (Andrej, * 1812 Suetschach in Rosental (Sveče in Rož) ; † 1888).

Albert Einstein (* 1879; † 1955)

Wilhelm Eisenlohr (* 1799; † 1872).
Daniel Ek (* 1983).

Johann Michael Ekling (Eckling, * 1795 Vienna; † 1876 Vienna).

Alfred Ekström (* 1873 Viksta parish, Uppsala county; † 1947 Botkyrka parish).

Johannes Elephantutius (Giovanni Scipione Elefantuzzi, Fantuzzi, † 14 November 1648).

Leonard Eleršek (* 1968 Zadar) colonel and engineer of Croatian air forces.

Don Fausto d'Elhuyar (* 1755; † 1833).

Heinrich Oscar Günther Ellinger (* 1857 Copenhagen; † 1947).

sir Charles Drummond Ellis (* 1895 Hampstead; † 1980 Cookham).

Walter Elsasser (* 1904 Mannheim; † 1991 Baltimore)

Julius Elster (* 1854; † 1920)

Anton Elšnik (* 1827 Sv. Jurij (St. Georg) in Slovenske Gorice).

Anton Elschnig (* August 22, 1863 Lipnica (Leibnitz) in Styria; † 1939).

Fritz Emde (* 1873 Uszyce in Śląsk (Silesia); † 1951 Stuttgart).

Karl George Emeleus (* 1901; † 1989).

August Hugo Emsmann (* 1810; † 1889).

Frederick William Engdahl (* 1944 Minneapolis), the conspiracy theorist based near Frankfurt on Main.

Victor Josef Karl Engelhardt (* 1866 Vienna; † 1944 Berlin).

Angelo Engelmayr (Engel Englmayr, Angelus, OFMobs in Austrian province St. Bernardin), flourished 1735-1745, general lector of theology and guardian of Franciscan monastery Eggenburg (Egenburg) in northern Lower Austria at least in 1743-1745, his works reprinted up to 1770.

Jožef Matija Engstler (* 1723 Oed in Lower Austria; SJ 1740 Linz; † 1811 Vienna).

Friedrich Franz Edler von Entnersfeld (Friedrich Entressfeld, Entnersfels, Entersfeld, * 1731 Vienna; † December 6, 1797 Vienna).

Franz Xaver Epp (* 1733; † 1789).

Anton Erberg (Franz Ksaver, * October 21, 1695 Dol by Ljubljana; † 3 October 1746 Ljubljana)

Bernard Ferdinand Erberg (* 1718; † 1773).

Ferdinand Benedict Gabrijel Erberg (* 1722; † 1796).

Franc Borgia Karel Erberg (* 1736; SJ 1752; † 1800).

Franz Michael Baron Erberg (* 1679; † 1760).

Innocent Erberg (* 1694; † 1763).

Janez Daniel Erberg (* 1647; † 1716).

Janez Jožef Lucius Erberg (* 11 February 1712 Ljubljana; SJ 18 October 1732 Vienna; † 29 June 1787 Dol).

Josef Kalasanc Ferdinand Avgustin Erberg (* 1771; † 1843)

Lenart von Erberg (Leonard Verderber, * 1606; † 1691 Kočevje).

John Ericsson (Johan, * 1803 Långban v Värmlandu na Švedskem; † 1889 New York).

Baroness Margareta Felicita Henrieta Erberg (* 1764 Ljubljana; † 1851 Ljubljana).

Maria Anne Elizabeth Erberg (* 1710; † 1752).

Susana Elizabeth baroness Erberg (* 1681 Ljubljana; † 1725).

Volbenk Daniel Erberg (* 1713; † 1783).

Marie-Thérèse de Palffy Erdödy (* 1719; † 25 December 1771).

Count Karl Paul III Palffy Erdödy (* 1697; † 1774).

Lennart Eriksson (* 1938; † 2014)

Emil Erlenmeyer (* 1825; † 1909).

Paul Erman (* 1764; † 1851).

Joseph Ermens (Jozef, * 1736; † 1805).

Ferdinand Ernecke (* 1832; † 1914).

Johann Christian Polykarp Erxleben (* 1744; † 1777).

Leo Esaki (江崎 玲於奈, Reona, * 1925 Osaka).

Johann Joachim Eschenburg (* 1743 Hamburg; † 1820 Braunschweig).

Gustav von Escherlich (* 1849; † 1935).

Josef Essl (* 1830 Berneck (Pernek); † 19 April 1874 Maribor).

Francesco III Maria D'Este (* 2 July 1698 Modena; † 22 August 1780 Varese).

Marie Beatrice Ricciarda d'Este, princess of Modena (* 7 April 1750 Modena; married on 15 October 1771; † 14 November 1829 Vienna).

Albert von Ettingshausen (* 1850; † 1932).

Andreas baron Ettingshausen (* 25 November 1796 Heidelberg; † 25 May 1878 Vienna).

Caroline Ettingshausen married Grailich (* 1835; † 1913).

Johan Albrecht Euler (* 1734; † 1800).

Leonhard Euler (* 1707; † 1783).

C. W. Francis Everitt (* 1934 Sevenoaks in Kent, UK).
Franz Serafin Exner (* 1849; † 1926).

Franz Exner (* 1802; † 1853), the father of the other three.

Karl Exner (* 1842 Prague; † 1914 Vienna).

Siegmund Exner (* 1846 Vienna; † 1926 Vienna).

F

Ruggiero Fabbri (Ruggero Fabri, * 1830 Ravenna; † aft. 1882 Ravenna).

Philipp Faber (Faventino, Fadentius, Filippo Fabri, * 1564 district Faenza Spinata di Brisighella; OFMconv 1582 Cremona; † 28 August 1630 Padova).

Vladislav Fabjančič (* 1894 Bučka by Škocjana and Raka; † 1950 Ljubljana).

Cornelia Fabri (Fabbri, * 1869 Ravenna; † 1915 Florence).

Honorat Fabri (Honoré, Honoratio Faber, Honoré Fabry, * 1606/07 Le Grand-Abergement between

Lyon and Grenoble (Virieux le Grand in Ain); SJ 1626 Avignon; † 1688 Rome).

Daniel Gabriel Fahrenheit (* 1686, Gdansk; † 1736 The Hague).

Richard B. Fair received his PhD at Duke University in 1969 to become a professor at Department of Electrical and Computer Engineering at Duke University, Durham, NC, USA.

Emanuel Fait (* 1854 Beroun (Verona, Beraun) 20 km southwest of Prague; † 1929 Prague).

Ignac Fajdiga (* 1850 Šentvid by Stična; † 1929 Kranj).

Isobel Jessie Falconer, former curator of museum at the Cavendish Laboratories tuned historian of mathematics and physics at School of Mathematics and Statistics at North Haugh St Andrews southeast of Edinburgh in Scotland Coast.

Carl-Gunne Fälthammar (* 1931 Markaryd, Sweden) Professor Emeritus at the Royal Institute of Technology in Stockholm, Sweden where he succeeded Hannes Alfvén as Professor of Plasma Physics in 1975.

Ernest Faninger (* 1923 Maribor; † 2015).

Bertha Fanta (née Sohr, * 1865; † 1918).

Michael Faraday (* 1791; † 1867).

Michel Angelo Fardella (* 1650 Trapani, Sicily; † 2 January 1718 Naples).

Tomasso Fardella († 1694).

Moses Gerrish Farmer (* 1820 Massachusetts; † 1893).

Duke of Parma Ottavio Farnese (* 1524; † 1586).

Philo Taylor Farnsworth (* 1906 Utah; † 1971).

Barthélemy Faujas de Saint-Fond (Barthélmium, * 1741; † 1819).

Gerlinde Faustmann (* 1956).

Antonio Favaro (* 1847; † 1922).

Gustav Theodor Fechner (* 1801; † 1887).

Berend Wilhelm Feddersen (* 1832; † 1918 Leipzig).

Stuart Michael Feffer, professor at University of California, Berkeley, Center for Science, Technology, Medicine, & Society (CSTMS), Research Unit: Office for the History of Science and Technology.

Riccardo Felici (* 1819 Pisa; † 1902 S. Alessio in Lucca).

Anton Felkel (* 1740; † after 1798).

Arash Ferdowsi (* 1985).

Nicolo Fergolas (* 1753 Napoli; † 1824 Napoli).

Edvard Ferlinz (* 1817; † 1874).

Enrico Fermi (* 1901; † 1954).

Josef Anton Ferrari from Monza (da Monza, Giuseppe Antonio de Modoetia, OFMconv; † 1776 Monza?).

Richard Alan Ferrell (* 1926 Santa Ana; † 2005).

Friedrich Fessel (* 1821; † 1860).

Friedrich Wilhelm Feussner (* 1843; † 1928).
Joseph Louis le Fevre (Fèvre, * 1706 Nantes; SJ 1722; † 1780/1783 France).

Richard Phillips Feynman (* 1918; † 1988).

Leonardo from Pisa Fibonacci (* 1170 Pisa; † 1250 Pisa).

Johann Gottlieb Fichte (* 1762; † 1814).

Johann Ehrenreich von Fichtel (* 1732 Bratislava; † 1795 Sibiu (Sibinj, Hermannstadt, Nagyszeben, Cibinium) at Transylvania).

George B. Field (* 1929 Providence, Rhode Island).

Aleksandr Tichonovič Filippov (Александр Тихонович Филиппов, * 1936) worked in town of science (Naukograd) Dubna (Дубна́) in Moscow region.

Nikolai Vasiljevič Filippov (Николай Васильевич Филиппов, * 1921 Moscow; † 1998 Moscow).

Sergeĭ Rostislavovich Filonovich (Sergei, Sergey Filonovič, Сергей Ростиславович Филонович, * 1952 Leningrad) later switched into management of business to became Dean of the Graduate School of Management of the National Research University Higher School of Economics in Moscow.

Josef Finger (* 1841; † 1925).

Rudolph Heinrich Finkener (* 1834; † 1902).

Bernard S. Finn (* 1932 Syracuse, New York).

Niels Ryberg Finsen (* 1860; † 1904).

Leonard Fioravanti (* 1518; † 1588).

Count Karl Joseph Firmian (* 1718; † 1782 Milan).

Emil Fischer (* 1852; † 1919).

Erhard Wolfgang Fischer (* 16 February 1929 Wiederau south of Leipzig; † 2011).

Johann Carl Fischer (Karl, * 1760 Allstedt (Thuringia); † 1833 Greifswald).

David E. Fisher (* June 22, 1932).
Marshall Jon Fisher (* 1963 Ithaca, New York), the son of David.

Sigmund Fischl (Siegmund Fischel, * 1847 Myslkovice (Miskowitz) in Tabor district of south Bohemia; † 1905 Prague).

George Francis FitzGerald (* 1851 Dublin; † 22 February 1901 Dublin).

Thomas Cecil Fitzpatrick (* 1866; † 1931).

Hippolyte Fizeau (1819 Paris–1896).

Gaius Valerius Flaccus (Valerio Flacco, * about 45; † about 90 AD.)

Dieter Flamm (* 1936 Vienna; † 2002) the son of Boltzmann’s son-on-law Ludwig Flamm (* 29 January 1885 Vienna; † 4 December 1964 Vienna).

John Flamsteed (* 1646; † 1719).

Alexander Jürgen Flechsig (* 1984).

Werner Flechsig (* 1900 Cologne, Germany; † 1981 Wolfenbüttel) was Pohl’s PhD student and assistant like Gudden.

Luise Fleck (Luise Kolm, Luise Kolm-Fleck, Louise Veltée, * 1 August 1873; † 15 March 1950).

Emil Fleischer (* 1843 Schwedt / Oder, † 1928).

John Ambrose Fleming (* 1849 Lancaster; † 1945).

Harvey Fletcher (* 1884; † 1981).
Dragutin Fleš (* 1921 Vukovar; † 2005).

Henry Albert Fleuss (* 1851 Marlborough in Wiltshire; † 1932).

Albert Fliegner (* 1842 Warsaw, Poland; † 1928, Lugano, Switzerland), replaced his teacher Zeuner as a professor of mechanics and engineering in ETH after Zeuner went to Dresden in 1872.

Francisco de Florencia (* 1619/20 Florida Espanola; SJ; † 1695 Mexico).

Ivan Dizma Florjančič de Grienfeld (Janez, Johann, * 1691; † ?1757).

Leslie Earl Flory (Les, * 1907 farm Sawyer in Kansas; † 2002), in 1930 joined RCA at Camden, NJ, then transferred to RCA headquarters in Princeton.

Etienne de Fodor (Étienne, István, * 1856 Bratislava; † 1929 Budapest).

Sigaud de la Fond (* 1730; † 1810).

Bishop of Porto José Maria Ribeiro Fonseca (da Fonseca de Évora, * 1690 Évora; OFM 8 December 1712 Rome; † 1752 Porto).

Charles Fontaine (* 1724; † 1802).

Hippolyte Fontaine (* 1833 Dijon; † 1910 Hyères on Mediterranean coast).

Pierre-Joseph Fontaine (* 1810; † 1877).

Felice Fontana (Felix, Felice Fontana (Felix, * April 15, 1730 Pomarolo near Rovereto in Tyrol near Rhône-Alpes, † 11 January 1805 Florence).

Bernard Le Bovier de Fontenelle (* 1657; † 1757).

George Forbes (* 1849; † 1936).

Henry Ford (* 1863; † 1947).

Lee de Forest (* 1873; † 1961).

Aimé Forster (* 1843 Beringen in Switzerland; † 1926 Bern).

Antonius Forti (* 1651 Caltagirone by Catania in Sicily; SJ; † 1707 Palermo).

Jean Nicolas Fortin (* 1750 Mouchy-la-ville (Oise); † 1831 Paris).

Léon Foucault (1819 Paris–1868 Paris).

Rayvon David Fouché (* 1969) director of American studies at Purdue university in USA.

A. Fournier professor of physics at lycée of the city La Rochelle in Charente-Maritime 30 km west of Surgères.

Georg Fournier (* 1595 Caen; SJ; † 13 April 1652 La Flèche).

George Fowler flourished in 1825-1852 in Paisley, Scotland.

Ralph Howard Fowler (* 1889 Roydon, United Kingdom; † 1944 Trumpington, Cambridge, UK).

William Alfred Fowler (* 1911 Pittsburgh; † 1995 Pasadena).

Robert Fox (* 1938 UK).

Samuel Fox, the husband of Erasmus's relative Anna Darwin.

William Darwin Fox (* 1805; † 1880) naturalist and a second cousin of Charles Darwin.

Girolamo Francastorio (Hieronymus Fracastorius, * 1478 Verona; † 1553 Calfi (Alfi) by Verona).

Louis-Benjamin Francœur's (Francoeur, * 1773 Paris; † 1849 Paris).

James Frank (* 1882; † 1964).

Philipp Frank (* 1884 Vienna; † 1966 Cambridge Massachusetts).

Usher Ionovitch Frankfourt (Jewish Russian, Oucher, Ушер Ионович Франкфурт, * 1908 Proskuriv (Proskurov, today Khmelnytskyi (Проскуров, Хмельни́цький) in western Ukraine; † 1982 Moscow).

Edward Frankland (* 1825; † 1899).

Benjamin Franklin (* 1706; † 1790).

Rosalind Franklin (* 1920 west London; † 16 April 1958 southwest London).

Joseph Franko (* 1771; † 1842).

count Franjo Krsto Frankopan (* 1643; † 1671).

Nikola IV Frankopan (* 1393; † 1432).

Robert Franz grew up in East Germany and studied physics in Rostock and Luleå until 2003; he got his PhD in Materials Science from Montanuniversität Leoben in 2007. In 2011-2013 he joined his fellow East German André Anders's Plasma Applications

Group at Lawrence Berkeley National Laboratory and then returned to Leoben.

Claudio Frassen (Claude, * 1620/21 Peronna (Péronnas) in eastern France; OFM; † 1711 Paris).

Georg knight Frauenfeld (Ritter, * 1807 Vienna; † 1873) curator of Viennese museum, one of the leading scientists on board the Austrian frigate Novara during round-the-world voyage.

Joseph von Fraunhofer (* 1787; † 1826).

Walter Friedrich (* 1883 Salbke by Magdeburg; † 1968 Berlin).

Frederick Freksa (Friedrich, pseudonym of Kurt Friedrich-Freksa, * 1882 Berlin; † 1955 Berlin).

Jakov Ilyich Frenkel (Yakov Il′ich, Яков Ильич Френкель, * 1894 Rostov on Don; † 1952 Leningrad).

Franciscus David Frescheur (Prescheur, * Cassel).

Sten von Fresen (* 1907 Uppsala; † 1996).

Carl Remigius Fresenius (* 1818 Frankfurt; † 1897).

Augustin-Jean Fresnel (* 1788; † 1827).

Ernest Freyer (Ernst, * 1729 Žatec (Saaz, Satz) near Ohr in the Sudetenland; † 1795 Idrija No. 136).

Henrik Freyer (* 1802; † 1866).

Robert Douglas Friedel (* 1950 Birmingham, Alabama)

Walter Friedel flourished as Patent office (Patentamt) employee and counsellor in Berlin in 1925-1931.

Francis Lee Friedman (* 1918 New York; † 1963 Boston).

Jakob Friedrich Fries (* 1773; † 1843 Jena).

Karl Friesach (* 1821; † 1891).

Otto Robert Frisch (* 1904; † 1979).

Nikodem Frischlin (* 22 September 1547 Balingen; † 29 November 1590 Hohenurach in Württenberg).

Paolo Frisi (* 1727; † 1784).

Gemma Frisius (* 1508; † 1555).

Felix Fritz, diploma engineer, researched oils as well as colours in Trieste in 1914, later in Eltville am Rhein in Hessen in 1937-1938.

Johann Friedrich Fritze (* 1735 Magdeburg; † 1807 Berlin), a Protestant physician.

Andrej Friz (Andreas, * 1711 Barcelona; SJ; † 1790 Gorizia).

Filip Fröhlich (* 1826 Metlika; † 1869 Ljubljana).

Erasmus Frölich (Fröhlich, * 1700, Graz; SJ; † 1758, Vienna).

Gaspar de la Fuente (Caspar Toletanus (Toledo in central Spain), * about 1596; OFMobs; † 1665).

Scottish-born Elisabeth Fulhame (* before 1764 Scotland; † after 1810).

Irish-born Thomas Fulhame (* before 1760 Ireland; † after 1800 Edinburgh?).

Robert Fulton (* 1765; † 1815).

Anton Funtek (* 1862 Ljubljana; † 1932 Ljubljana), Editor of *LZg* in 1895-1918.

Michael Furter (* Augsburg; † 10 November 1516/ 2 May 1517 Basel).

G

Mathias Gabler (* 1746; SJ; † 1805).

Dennis Gabor (Günszberg Dénes renamed Gábor in 1902, * 1900 Budapest; † 1979 London).

Aleš Gabrič (* 1963 Ljubljana).

Franz Charles Gabriel (* 1790; † 1858).

Max Paul Wolfgang Gaede (* 1878; † 1945).

Johann Gottlieb Gahn (* 1745; † 1818).

Pavao Gajić (* 1923).

Oscar Gale (* 1903; † 1998).

Domenico Gusmano Galeazzi (Galeati, * 1686 Bologna; † 1775 Bologna).

Joseph Galien (Gallien, * 1699/1700 Saint-Paulien in France; Dominican; † 1762/82 Avignon).

Franc Galilei (* Florence; † before 17 June 1647).

Galileo Galilei (* 1564; † 1642).

Mary Celeste Galilei (* 16 August 1600 Padua; † 16 February 1634 Florence).

Roberto Galilei (* 1595 Florence).

Roberto Galilei (* 1615 Florence; † 1681 Ljubljana).

wife Sidonia Victoria Baroness Mordax married Galilei (* 1624; † 1665 Ljubljana).

Theophilus Gallaccini (* 22 September 1564 Siena; † 27 April 1641 Siena).

Ludwig von Gallenfels (Ludovico, Golnik, baptized Johann Jakob on 14 December 1662; OFMobs; † 22 February 1728 Kamnik).

Evariste Galois (* 26 October 1811 Bourg-le-Reine by Paris; † 31 May 1832 Bourg-le-Reine).

Luigi Galvani (* 1737; † 1798).

Pio Riego Gambini (* 1893; † 1915).

Revaz Valerianovic Gamkrelidze (Гамкрелидзе, Рева́з Валериа́нович Гамкрели́дзе, * 1927 Kutaissi (Кутаиси) in Georgia) Georgian-Soviet mathematician of optimal control theory and related fields.

George Gamow (Georgy Antonovich Gamov, Гео́ргий Анто́нович Га́мов, * 1904 Odessa; † 1968 Boulder, Colorado).

Sigmundus Gandin de Lilienstein (Andrej, * Hrib (Obergörtschach) along the Lake Črnava by Preddvor, † 1791).

Adolphe Ganot (* 1804; † 1887 Paris).

Ábrahám Ganz (Abraham, * 1814 Unter-Embrach in Switzerland; † 1867 Pest).

Nicholas II Garai (Nicolaus de Gara, II Garai Miklós, Nikola II Gorjanski, * 1367; † 1433).

Pius Nikolaus von Garelli (* 10 September 1675 Bologna; † 21 July 1739 Vienna).

André-Jacques Garnerin (* 1769; † 1823).

Jože Gasperič (* 1932 Ljubljana; † 2019).

Pierre Gassendi (* 1592; † 1655 Paris).

John Peter Gassiot (Gassiott, * 1797 London; † 1877 Ryde at the northeast of Isle of Wight).

Carl Gassner (*1855 Mainz; † 1942), practical physician in Mainz.

Pavel Gašperšič (* 1601; SJ; † 1672).

Bill Gates (* 1955).

Antoine Gaubil (Gobil, Gaubille, Sun Kiun-Yong, Song Junrong Qi Ying, Sun Kiun-yung, 宋君榮, * July 14, 1689 Gaillac in Languedoc; SJ September 13, 1704 Toulouse; † July 24, 1759 Beijing).

Antoine Gaudron (* 1640; † 1714).

Jean Motthé Gaugain (Jean-Mothee, * 1810 Sully in Calvados in Normandy; † 1879/80 St. Martin d'Estreaux near Bayeux).

Johann Carl Friedrich Gauss (* 1777; † 1855).

Pierre Gautruche (Peter Galtruchius, Pierre Gaultier,

Gaultier of Orléans, Gaultier Orléanois, Gaultier de Rome, * 1602 Orléans; SJ 1621 Orléans; † 1681 Caen).

Jean-François Gauvin (* 1969) curator at Harvard University.

Jules Gavarrett (Louis Denis, * 1809; † 1890).

Louis Joseph Gay-Lussac (* 6 December 1778 St. Léonard in Limousin; † 9 May 1850 Paris).

Anton Geba (* 1860; † after 1901).

Franz Geba (Fran, * 1823; † after 1881).

Josef Geba (* 21 February 1882).

Josip Geba (* 1854).

Marija married Geba (* 1818).

Keith Geddes published about the history of TV and wireless in 1976-1991.

Claude-Joseph Geffroy (* 1685 Paris; † 1752 Paris).

Johann Samuel Traugott Gehler (* 1751 Görlitz; † 1795 Leipzig).

Paul Gehne received his PhD with a dissertation about permanent magnets in Halle in 1908.

Meg Gehrts (* 1891; † 1966).

Ernest Peter Geiduschek (* 1928 Vienna).

Hans Wilhelm Geiger (* 1882 Neustadt an der-Weinstrasse; † 1945).

Josip Geiger (Gregorius Josephus, * 27 August 1812 St. Peter no 19; † 25 March 1893).

Maria Schnitzler married Geiger (* 1817).

Paul Harold Geiger (* 1896 Paris, Michigan; † 1954).

Friedrich Wilhelm Geissler (* 1818).

Heinrich Geissler (* 1814; † 1879).

Joseph Geist (* 1770 Vienna; † 1824 Graz).

Hans Friderick Geitel (* 1855; † 1923).

Hiraga Gennai (平 賀 源 内, nicknamed Fūrai Sanjin, 風 来 山人, * 1728/29; † 1779).

Friedrich von Gentz (* 1764; † 1832).

Anton Genuensis (Genovesi, * 1713; † 1769 Napoli).

Cherubin Le Gentil (Chérubin, * Orleans; OFMCap; † 1697).

Johann Gottlieb Georgi (* 1729 Gryfice in Pomeranian north-western Poland; † 1802 Sankt Petersburg), botanist-geographer of Siberia.

Walter Gerber (* 1902 Bern; † 1986).

Ranieri Gerbi (* 1763; † 1839 Pisa).

Hellmut Georg von Gerlach (* 1866 Moczydlnica Klasztorna in Polish Silesia (Mönchmotschelnitz); † 1935 Paris).

Walter Gerlach (Walther, * 1889; † 1979).

Anton Werner Ernst Gerland (* 1838 Kassel; † 1910 Clausthal, Lower Saxony).

Lester Halbert Germer (* 1896; † 1971).

Franz Anton Gerstner (František, * 1796; † 1840).

Franz Joseph knight Gerstner (* 1756; † 1832).

Wilhelm Geyss (Guilielmo, * Franconia (Franken) in Bavaria; OFMconv; † 1711 Valduna in Switzerland or in Austrian Vorarlberg).

bishop Bernhard von Ghellen (Gallen, Christoph Bernhard baron Galen, * 1606 Drensteinfurt; † 1678).

Jean Joseph Ghislain (* 1751 Salles by Chimay in Habsburg Belgium; Vincentian (Lazarist); † 1812 Beijing).

Nicola Gianpriami (Niccolò Gianpriamo, Gian-Priami, * 1686 Aversa; SJ; † 1759 Napoli).

Josiah Willard Gibbs (* 1839; † 1903).

Jacques Gibelin (* 1744 Aix-en-Provence; † 1828 Aix-en-Provence), physician, librarian and translator.

Elizabeth Gibney, a senior physics reporter of *Nature*, also writing for *Scientific American, BBC,* and *CERN*.

Robert Bernard Gibney (* 1911 Wilmington, Delaware; † 20 May 1991 New Castle, Delaware).

Janez Nepomuk Giel (Giehl, Giell, * 16. May 1734, Leitha on the Hungarian bank of Leitha river; SJ 17 October 1753, Vienna; † after 1786).

Henri Giffard (* 1825; † 1882).

Ludwig Wilhelm Gilbert (* 1769; † 1824).

William Gilbert (* 1540; † 1603).

Hermann Gilhofer (* 1852; † 1913).

Charles Henry Gimingham (* 1853; † 1890).

Franciscus Ginthör (Franciscus Gindhör, * 1714 Passau; SJ 1739 Passau; † 1774 Linz?)

Prince Bishop of Passau Joseph Anthony Gindhör (* 1713; † 1791).

Wilhelm Friedrich Gintl (* 1843 Vienna; † 1908 Prague).

Vitaly Lazarevich Ginzburg (Вита́лий Ла́заревич Ги́нзбург, * 1916; † 2009).

Vitale Giordani (* 1633; † 1711).

Christoph Girtanner (* 1760; † 1800).

Luigi Giusti (* 1709 Venice; † 1766).

John Hall Gladstone (* 1827; † 1902).

Gustave Glaser (Gustav Glaser de Cew), published in 1883-1909.

Karol Glaser (Karel Glazer, Karel Glaser, * 1845 Reka by Zgornje Hoče near Maribor; † 1913 Graz, buried in Zgornje Hoče).

Otto Glasser (* 1895 Saarbrucken; † 1964 Cleveland, Ohio).

Bruno Glatzel (* 1878 Berlin; † 1914 by Verdun).

Johann Rudolph Glauber (* 1604 Karlstadt; † 1668 Amsterdam).

Johann Gottlieb Gleditsch (* 1714; † 1786).

Wolfgang Gloede published in Germany in 1977-1986.

Joža Glonar (* 1885, Zg. Korena by Maribor; † 1946 Ljubljana).

Leopold Gmelin (* 1788; † 1853).

Johannes z Gmundenu (* 1380/83 Gmunden in Upper Austria; † 1442).

Laurentius Gobart (* 1656 Liége; † 1750 Liége).

Gerhart Goebel (* 1906 Köln (Cologne); † 1995 Darmstadt-Eberstadt), published on history of (German) television in 1950-1985.

Heinrich Goebel (Henry Göbel, * 1818 Springe of Lower Saxony in Germany; † 1893 New York).

Johann Wolfgang von Goethe (* 1749; † 1832).

Anton Gogala (* about 1789 Lesce by Bled; 1835 ennobled von Leesthal; † 9 October 1841 Trieste).

Christian Goldbach (* 1690 Kaliningrad (Königsberg); † 1764 Moscow).

Peter Goldmark (Péter Károly, * 1906 Budapest; † 1977).

Bertrand Goldschmidt (* 1912 Paris; † 2002 Paris).

Bernard Raphael Goldstein (* 1938), a historian of astronomy as professor emeritus at the University of Pittsburgh.

Eugen Goldstein (* 1850 Gleiwitz, today's Gliwice in Polish Silesia; † 1930).

Heinz Rudolf Friedrich Gollnow (* October 3, 1911; † 1995) after his PhD at Friedrich-Wilhelms-Universität Berlin in 1937 researched quadrupole moments of nucleuses for Hermann Schüler's Berlin-Dahlem group in 1938, joined Göttingen University astronomic observatory (Universitäts-Sternwarte zu Göttingen) in 1948-1950, and finally worked at Mount Stromlo Observatory of the Australian National University near Canberra after 1952.

Andreas Golob from Institut für Geschichte & Universitätsarchiv at Karl-Franzens-Universität in Graz, (Institute for History and archive of Graz University).

Gregor Golobič (* 1964 Novo Mesto).

Igor Nikolaevich Golovin (* 1913 Moscow; † 1997 Moscow).

Grant Kohn Goodman (* 1924 USA).

Robert H. Gordon residing at Beading, in the county of Berks, Pennsylvania in 1883.

Majnard Henrik of Gorizia (Gorica, * 1385; † 1426)

Peter Gosar (* 1923).

Antonio Lorenzo Gossetti (Gosselti, * Zadar; † 1895 Trieste).

Ivan Gošnjak (* 1909 Ogulin; † 1980 Beograd).

Johann Gottlieb (* 1815 Brno; † 1875 Graz).

Martin Gottscheer (Gottseer, * 1648 Kirchau locality in Warth in Alpine Upper Austria; SJ 1668 Leoben; † 1731 Graz).

Josef Stulla-Götz (* 1901 Vienna; † after 1972).

Maximilian Götzen (* 1723 Prague; SJ 1739 Vienna; † 1798).

Antoine Goudin (* 1639; Dominican; † 1695).

Jules-Antoine-René de la Gournerie (* 1814; † 1883).

Bruno Goussault (* 26 January 1942).

Alexandre de Gouvea (Gouveia, * 1731 Evora (Évora) in Portugal; OFM third order 1775; † 1808 Beijing).

Carolina Leopoldine Elisabeth Franziska Gozani (* 2 March 1815).

Eve Trockenbrot married Gozani (Eveline, * 1792; † 25 March 1872).

Ferdinand Gozani (Bartholomäus Felix Konrad baptized on 1 November 1819).

Franziska Marquise Gozani (Maria Agnes Elisabeth Gozana (Gozzani) de St. Georges, * 1824).

Guido Josef Fidelizs Vinzenz Gozani (* 5 April 1831).

marquis Johann Nepomuk Gozani (* 1782; † 18 June 1836).

Johanna Nep. Katharina Elisabeth Franziska Gozani (baptized on August 24, 1818).

Robert Jemison Van de Graaff (* 1901; † 1967).

Boris Grabnar (* 1921 Ljubljana; † 2003).

Boris Pavlovič Grabovski (Grabowski, Бори́с Па́влович Грабо́вский, * 1901 Tobolsk; † 1966 Frunze) 182

Leo Graetz (* 1856 Wroclaw; † 1941 Munich).

Ferdinand Graf published about Alpine botany in 1875-1886.

Thomas Graham (* 1805; † 1869).

Joseph Wilhelm Grailich (* 1829 Bratislava; † 1859 Vienna).

Zénobe Théophile Gramme (* 1826; † 1901).

Antoine Le Grand (* 1629 Douai; † 1699 London).

Abbé Guido Grandi (* 1 October 1671 Cremona; † 4 July 1742 Pisa).

Edward Grant (* 1926 USA).

Willem Jakob Storm van s'Gravesande (William, * 27 September 1688 Herzogenbusch; † 28 February 1742 Leyden).

Drago Grdenić (* 1919 Križevci; † 2018 Zagreb).

Igor Grdina (* 1965 Celje).

Ralph Greatorex († 1712).

Jean-Baptiste Willart de Grécouro (* 1684; † 1743).

George Green (* 1793; † 1841 Nottingham).

Joe E. Greene (Joseph, * 1944 Arcata 280 miles north of San Francisco).

William Greener († 1869) gun manufacturer in Newcastle-Upon-Tyne and after 1844 in Birmingham. Farther of William Wellington Greener (* 1834; † 1921).

Robert Philips Greg (* 1826 Manchester; † 1906).

Lavoslav Gregoréc (* 1839; † 1924).

Heinrich Greinacher (* 31 May 1880; † 1974).

Jacques Bretel de Grémonville (* 1625; † 1686).

Friedrich Albrecht Carl Gren (* 1760; † 1798).

Heinrich Friedrich Gretschel (* 1830 Prietitz near Elstra in Germany; † 1892 Freiburg, Switzerland).

Zaharias Greyl (Greil, † 1720/1721 Augsburg).

Christoph Grienberger (* 1564; † 1636).

Joseph Grim (Grimm, Grimb, * 1742/1744 Upper Styria near Leoben; SJ 1762 Trenčin; †) attended Grammar School in Leoben, Maribor grammar school professor already in 1779/80, taught rhetoric after 1796 and schoolmaster in 1806 until his retirement in 1812.

Pietro Grimani (* 1677 Venice; † 1752) Venetian doge in 1741.

Jacob Grimm (* 1785; † 1863).

Wilhelm Grimm (* 1786; † 1859).

Francesco Grisellini (* 1717 Venice; † 1783 Milano).

Lars Olai Grondahl (* 1880 Hendrum, Minnesota; † 1968).

Caspar Gabriel Grönin (Kaspar, * 1752 Wismar in then Sweden now north Germany; † 1799 Wismar).

Eugene P. Gross (* 1926 New York; † 1991 Boston).

Theodor von Grotthuss (* 1785 Leipzig; † 1822 Gedučiai in Lithuania).
William Robert Grove (* 1811; † 1896).

Anton Gruber (* 26 March 1750 Vienna; † 1819).

Gabriel Gruber (* 1740 Vienna; † 1805).

Johann Gruber (* 1623; † 1680)

Tobias Gruber (* 1744 Vienna; † 1806)

Mirjan Gruden (* 1910 Ljubljana; † 2001).

Johann August Grunert (* 1797 Halle, Saxony-Anhalt; † 1872 Greifswald, Vorpommern-

Greifswald), professor and editor of mathematical journals in Greifswald.

Wenzel J. Grünert was a certified high school teacher candidate and assistant at the German technical college (University) in Brno (Brünn) in 1872-1873, before they hired private docent Ignaz Wallentin. With the approval Moravian authorities Grünert joined the teaching staff of Brno Higher Grammar school in the second semester as a teacher candidate on March 4, 1873.

Alfonz Gspan (* 1904 Krško; † 1977 Ljubljana) historian of literature and librarian, the son of botanist-surveyor Alfonz knight Gspan (* 1878 Kostanjevica; † 1963 Ljubljana).

Nada Prašelj married to Alfonz Gspan (Nadežda, * 1927 Maribor; † 2009 Ljubljana) librarian and linguist.

Anna Guagnini of department of philosophy and communications at the University of Bologna

Ignazio Guarini (* 1676; † 1748).

Bernhard Gudden (* 1892 Beuel in Bonn; † 1945 Prague).

Otto Guericke (* 1602; † 1686).

Jacques-Casimir Guérinois (Jakob, * 1640 Laval (Cenomanensi) in western France; OP 1656; † 1703 Bordeaux).

Veremundus Gufl (* 1705; OSB; † 1761) the Benedictine in monastery Prüfling (Prüfening Abbey) in outskirts of Regensburg in Bavaria.

Charles Édouard Guillaume (* 1861 Fleurier in Switzerland; † 1938 Sèvres in France).

Jean Pierre François Guillot-Duhanel (* 31 August 1730 Nicorps by Coutances; † 19 February 1816 Paris).

Joseph Gundl (* 1710; SJ; † 1770).

Antoine Nicolas Guntz (* 1859; † 1935 Nancy).

Samuel Gunz (Leopold Gientz, Guentz, * 1782/1785 Prague).

Simon Gunz (Guntzhausen, * 1743 Augsburg; † 11 November 1824 Prague).

Vladimir Aleksandrovich Gurikov (Aleksandrovič, Владимир Александрович Гуриков) published in Moscow in 1983-2018.

Ronald Wilfred Gurney (Wilfrid, * 1898 Cheltenham in England; † 1953 New York).

Viktor M. Gusev (Виктор Михайлович Гусев, * 1919; † 1978).

Marija I. married Guseva (Мария Ильинична Гусева, * 1925 Нежин (Nizhyn) in northern Ukraine); † 2017).

Bartholomei Laurenço de Gusmão (* 1685 Santos; † 1724 Toledo).

Julius Franciscos Gusman (Gusmann, * 1702; OAug; † 1776).

Franz Güssmann (Güsman, Gusman, * 30 September 1741 Wolkersdorf in Lower Austria; SJ 1757 Vienna; † 28 January 1806 Seitenstettin).

Božidar Guštin (* 1912; † 1984).

Johannes Gutenberg (* 1398; † 1468).

H

Pieter Willem Haaijman (* 1913 Middelburg) obtained his PhD in Amsterdam on 10 July 1940.

Erich Habann (* 1892; † 1968).

Fritz Haber (* 1868 Wroclaw; † 1934 Basel).

Marsbed H. Hablanian (Марсбед Х. Хабланиан, * 1924 Ukraine) the expert employed at Varian Vacuum Products, Lexington.

Eleonora Maria Josefa Habsburg (* 1653; Polish Queen 1670; † 1697).

Ferdinand I Habsburg (* 1503; German Emperor 1556; † 1564).

Ferdinand I Habsburg (* 1793; Emperor 1835-1848; † 1875).

Ferdinand III Habsburg (* 1608; emperor in 1637; † 1657).

Ferdinand IV Habsburg (* 1633; † 1654).

Ferdinand Karl Anton Joseph Johann Stanislaus Habsburg, archduke of Austria, duke of Modena (* 1 June 1754 Schönbrünn; † 24 December 1806 Vienna).

Emperor Frederik III Habsburg (* 1415; † 1493).

Emperor Josef II Habsburg (* 1741; † 1790).

Leopold I Habsburg (* 1640; emperor from 1658; † 1705).

Empress Maria Theresia Habsburg (* 1717; † 29 November 1780).

Mary of Habsburg (* 1505 Brussels; † 1558 Spain) the Hungarian queen.

Maximilian I Habsburg (* 1459; † 1519).

Emperor Rudolf II Habsburg (* 1552; emperor in 1576; † 1612).
Crown Prince Rudolf Habsburg (* 21 August 1858; † 30 January 1889).

daughter of Josef II, Theresia Elisabeth Habsburg (* 20 March 1762; † 23 January 1770).

Balthasar Hacquet (* 1739/1745; † 1815 Vienna).

Dušan Hadži (* 1921 Timisoara; † 2019 Ljubljana).

Jovan Hadži (* 1884 Timisoara; † 1972 Ljubljana).

Ernst Bessel Hagen (Carl, * 1851 Königsberg (Kaliningrad); † 1923 Solln by München).

Jacob Eduard Hagenbach-Bishoff (* 1833 Basel; † 1910 Basel).

Otto Hahn (* 1879; † 1968).

Ana Haldane married Nuki (* 26 June 1936; † 2001).

Duncan Haldane (* 1951 London).

Euphemia Bell married Haldane (* 1851).

Frederick Paterson Haldane (* 24 May 1912; † 15 September 1983).

Heulwen Morgan married Haldane

John Burdon Sanderson Haldane (* 1892; † 1964).

John Stuart Haldane (* 6 December 1957; † 21 August 2000).

Roberto Haldane (* 1841).

Thomas Frederick Haldane (* 1839 Kran High Church Paisley Renfrew; † 1916 Paisley, Renfrewshire 10 km west of Glasgow near the airport).

Charles Nicolas Alexandre Haldat du Lys (* 1770; † 1852 Nancy).

Jean-Baptiste Du Halde (* 1674; SJ; † 1743)

Agnes Spiers married Halden (Speirs, * 1804 the Paisley in Renfrewshire West of Glasgow in Scotland; † 1887 Maryhill in Lanarkshire, today the southeast part of Glasgow in Scotland).

John Halden (* 1787 Scotland; † 1856).

Stephen Hales (* 1677; † 1761).

Edwin Hilbert Hall (* 1855; † 1938).

Howard Tracy Hall (* 1919 Ogden, Utah; † 2008 Provo, Utah).

Franz Halla (* 1884 Vienna; † 1971 Dörfl in Lower Austria).

Albrecht von Haller (* 1708 Bern; † 1777 Bern).

Abundius Hallerstein († 1768).

Alexander Hallerstein († 1804 Ljubljana).

Avguštin Hallerstein (* 1773 Ljubljana; † 1774 Beijing).

Janez Vajkard Hallerstein (Weikhard, * 1706; † 1780 Dol by Ljubljana).

Edmund Halley (* 1656; † 1742).

Wilhelm Hallwachs (* 1859; † 1922).

John Baptist du Hamel (Joannis Baptistae Duhamel, * 1624 Vire in northwestern Normandy; Oratorian priest; † 1706 Paris).

William Rowan Hamilton (* 1805; † 1865).

Johann Hammerschmied with PhD in medicine worked as a Cashier of Association for the dissemination of scientific knowledge (Cassevervalter der Verein zur Verbreitung Naturwissenschaftlicher Kenntnisse) in Vienna from 1872, Councilor of Accounts at the Agriculture Ministry in 1873-1888 (Rechnungsrat (Rechnungsrath) in Ackerbau Ministerium).

William Hampson (* 1854; † 1926 London).

Franjo Hanaman (* 1878 Denovac in the county of Županja; † 1941).

Ambros Godfrey Hanckwitz (* 1660 Köthen (Cöthen, Anhalt); † 1741 London).

Alois Handl (Aloiz, * 1837 Feldkirch, Vorarlberg; † 1915 Suceava in Bukovina, now Romania (or Czernowitz (Chernivtsi) in Ukraine) taught experimental physics at the Universities of Lvov, Theresian Academy of Wiener-Neustadt and at Chernivtsi as a rector in 1879-1880 and 1894-1895 until his retirement in 1906.

Alexius Meinong Ritter von Handschuchsheim (* 1853 Lvov; † 1920 Graz).

Gregor Hanner (* 20 August 1807 Vienna).

Duke of Brunswick-Lüneburg Johann Friedrich of Hanoverian House (Frederick, * 1625 Herzberg am Harz 90 km southeast of Hanover; † 1679 Augsburg).

King George III of Hanoverian House (* 1738; † 1820).

Nicholas Adolf Hans (* 1888 Russia; † 1969 Greater London, UK).

Christian Hantschk (* 1943 Vienna).

Harry Hansen (* 1884 Davenport, Iowa; † 1977).

Branko Hanžek (* 1957 Čakovec).

Danica Burg-Hanžel (* 1934 Tržec).

Jean Appier Hanzelet (* 1596; † 1647).

Robert Hare (* 1781; † 1858).

Gerhard Ernst Friedrich Harig (Garig, Герхард Э. Гариг (* 1902 Niederwürschnitz; † 1966 Leipzig).

William Draper Harkens (* 1873; † 1951).

Cardinal Archbishop Ernest Adalbert de Harrach (Arnošt Vojtěch hrabě z Harrachu, * 1598; † 1667).

Thomas Rajmund count Harrach (* 7 March 1669 Vienna; † 1742 Vienna).

Rom Horace Romano Harré (* 1927 Manawatu, New Zealand; † 2019), a New Zealand-British analytical philosopher and psychologist od scientific realism.

John Harrison (* 1693; † 1776).

Georg Philipp Harsdörffer (* 1 November 1607 Nurnberg; † 22 September 1658).

Franz Hartig (* 1758 Prague; † 1797 Dresden).

Bruno Hartman (* 1924 Celje; † 2011).

Edmund Newton Harvey (* 1887 Germantown, Pennsylvania; † 1959 Woods Hole, Massachusetts) collaborated with Alfred Lee Loomis in the invention of the centrifuge microscope.

William Harvey (* 1578; † 1657 London).

Hasashige Tanaka (田中 久 重, * 1799 Kurume; † 1881).

Lorenz Leopold Haschka (Haska, * 1749 Vienna; † 1827 Vienna).

Friedrich Hasenöhrl (* 1854; † 1915).

Eduard von Haschek (Hašek, * 1875 Vienna; † 1947 Vienna) after the Anschluss of 1938 got professional ban together with Hans Thirring and suffered the additional house ban.

Hashimoto Sōkichi (橋本 宗吉, Naomasa, Tei; Hakubin, Hakukō, * 1763 Osaka; † 1836).

Hashimoto Takehiko (橋本 毅彦, * 1957 Tokyo).

Georg H. Hass (* 1913 Hanau, Germany; † 2003) studied at Danzig Institute of Technology. On 1 May 1946 he joined US Army Night Vision Engineer Research and Development Laboratories at the Engineer Center Fort Belvoir Virginia.

Jean-Henri Hassenfratz (Hassenfratβ, * 1755 Paris; † 1827 Paris).

Francis Hauksbee (Hawksbee, * 1660; † 1713).

Francis Hauksbee (Hauksbee, Hawksbee, * 1660 Colchester; † 1713 London).

Francis Hauksbee the nephew (* 1687; † 1763).

Herbert Aaron Hauptman (* 1917 New York; † 2011 Buffalo) Jewish physical and structural chemist at the Medical Foundation of Buffalo who shared the 1985 Nobel Prize in Chemistry.

Victor Hausmaninger (* 1855; † 1907).

Walter Norman Haworth (* 1883; † 1950).

Abbé René Just Haüy (* 1743; † 1822).

Franjo Ivan Havliček (* 3 December 1906 Moravska Ostrava; † 7 March 1971 near Novi Vinodolski in Dalmatia).

Jaroslav Havliček (* 1879 Garešnica southeast of Zagreb; † 1950 Zagreb).

Ivan Jožef Anton von Haymonn (Haymann, Haiman, Haymon, * 1722 Postojna; † 1799 Ajman's (Ehrenau) castle by Sveti Duh by Škofja Loka).

Hazama Shigomi (間 重, * 1756; † 1816).

Harold Locke Hazen (* 1901; † 1980).

Karl Heider (* April 28, 1856; † 1935).

Benjamin Hederich (1675; † 1748).

Friedrich Franz Heinrich Philipp von Hefner-Alteneck (* 1845; † 1904 Biesdorf near Berlin), close aide of Werner von Siemens.

Georg Wilhelm Friedrich Hegel (* 1770; † 1831).

Johann Florian Anton Heidmann (* June 16, 1772, Jáchymov (Sankt Joachimsthal) in Bohemia near the border with Saxony; † December 7, 1855, Vienna).

Agnesa Arsenjewa married Heil (Агнесса Николаевна Арсеньева, * 1901; † 1991).

Oskar Heil (* 1908 Langwieden in western Germany; † 1994, San Mateo, California).

John Lewis Heilbron (* 1934 San Francisco, California).

Johann Christoph Heilbronner (* abt. 1706; † 1747).

Jean-Jacques Heilmann (* 1853 Mülhausen; † 1922).

Johann Heilmann (* 1771; † 1834).

Johann Jacques Heilmann (* 1822; † 1859).

Josua Heilmann (* 1796; † 1848).

Mathia Heimbach (* 1666 Euskirchen in North Rhine-Westphalia; SJ Köln; † 1747 Köln).

Placidus Heinrich (born Joseph Heinrich, * 1758 Schierling by Regensburg; † 1825 Regensburg).

Werner Heisenberg (* 1901; † 1976).

Josef Karl Hell (Jozef Karol Höll, * 1713 Štiavnické Bane; † 1789 Banská Štiavnica (Schemnitz)).

Josef Karl's farther Mathias Corvinus Hell.

Josef Karl's brother Maximilian Hell (* 1720; SJ; † 14 April 1792 Vienna).

Josef Karl's brother Ignaz Cornel Hell

Rudolf Hell (* 1901; † 2002 Kiel).

Alexander Julius Hellemans (* 1946 Belgium), a freelance science writer in Antwerp, Belgium, former Director (science writer) at Sussex scientific limited UK from 2010 to 2015.

Wilfried Heller (* 1903 Bad-Durkheim; † 1982 Huntington Woods suburb of Detroit).

Christoph Friedrich Hellwag (* 1754; † 1835).

Marcus Hellyer, received Ph.D. in the history of semi-military Jesuitical science at the University of California, San Diego, after 2008 he transformed in a senior research officer at Parliament House as a terrorism analyst focusing on defence economics and military capability of Australian Strategic Policy Institute (ASPI) in intelligence community in Canberra.

Georg Helm (* 1851 Dresden; † 1923 Dresden).

Anna von Helmholtz (née Anna von Mohl, * 1834 Tubingen; † 1899) scientific translator as a second wife of Herman von Helmholtz.

Herman von Helmholtz (* 1821; † 1894).

Francis Mercurius van Helmont (* 1614 Vilvoorde in Belgium; † 1698/1699 Cölln by Berlin).

Jan Baptist van Helmont (Joannes, * 1580 (1579 by Old Style) Brussels; † 1644 Vilvoorde).

Walter Matthias Hempel (* 1851; † 1916 Dresden).

Heinrich Heraeus (* 1861; † 1910).

Jürgen Heraeus (* 1936).

Reinhard Heraeus (* 1903; † 1985).

Wilhelm Heraeus (* 1860 Hanau; † 1948 Hanau).

Wilhelm Carl Heraeus (* 6 March 1827 Hanau; † 1904).

Wilhelm Heinrich Heraeus (* 1900 Hanau; † 1985 Hanau).

Marija Ana Countess Herberstein (* 1660; † 1726).

Siegmund (Sigismund) baron Herberstein (Žiga, * 23 August 1486; † 28 March 1566).

Sigmund Friderik baron Herberstein (* 1549; † 1620).

Josef Edler von Herbert (Joseph Herverth, Hervert, Herwerth, Baptized on 26 August 1725 in Klagenfurt St. Egid; SJ; † 18 March 1794 Linz or parish Wels-St. Stephan 20 km southwest of Linz in bishopric Linz).

baron Michael Herbert (Johann Herverth, Hervert, Herwerth).

Francesco Herbitz (Frančišek Borgia, * 1752/1753 Jesenice; † after 1809 Vienna).

Carl Hering (* 1860 Philadelphia; † 1926 Philadelphia).

Zlatko Herkov noble Prazmaj Unadolski (* 1904 Zagreb; † 1994 Zagreb) historian, metrology expert, and economist.

Joseph Herman of New York researched television for *American Telephone and Telegraph Company* in 1925 and published for *Nokia Bell Labs* in 1928.

Emil Herrmann (Hermann, Herrmann Emil Gusztáv, * 1840 Dognecea in Hungary in present-day Romania; † 1925 Budapest), after studies at the Viennese Polytechnic and in Banská Štiavnica he became professor at Mining and Forestry Academy in Banská Štiavnica (Berg- und Forst Akademie in Schemintz) in Slovakia at then Hungarian part of Habsburgian monarchy in 1869, full professor in 1884 as well as Higher mining counsellor (Oberbergrath).

Sigismund Friedrich Hermstadt (Hermbstädt, * 1760 Erfurt; † 1833 Berlin).

Francisco Hernandez (* 1514 La Puebla de Montalbán, Toledo; † 1587 Madrid).

Hero of Alexandria (Ἥρων ὁ Ἀλεξανδρεύς, Heron ho Alexandreus, * about 10 AD. Alexandria; † about 70 AD. Alexandria).

Edward W. Herold (* 1907; † 1993).

Gustav Ludwig Hertz (* 1887; † 1975).

Heinrich Rudolf Hertz (* 1857 Hamburg; † 1894 Bonn).

Johann Daniel Hertz (* 1693; † 1754).

Sir John Frederick William Herschel (* 1792; † 1871).

William Herschel (* 1738; † 1822).

Josef Hervert (* 1846; † 1883).

Frederick Augustus Hervey (* 1730; † 1803).

Albert Hess, the head of the electrochemical department of Schuckert & Co., after Schuckert's death renamed to EAG (Elektrizitätsaktiengesellschaft/Electricity Public Company) in Nuremberg.

Philipp Hess (* 19 January 1845 Prague; † 8 November 1919 or 1926 Vienna).

Victor Franz Hess (1883 Waldstein castle in Styrian Peggau-1964 Mount Vernon suburb of New York).

Wilhelm IV of Hesse-Kassel (* 1532; † 1592).

Johann Friedrich Christian Hessel (* 1796; † 1872).

J. Ferdinand Hessler (Heßler, * 23 February 1803 Regensburg; † 13 October 1865 Vienna).

Karl Heumann (* 1850 Darmstadt; † 1894 Zürich).

Georg Hevesy (* 1885; † 1966).

Peter Cooper Hewitt (* 1861 New York; † 1921 Paris).

Castul Hieber (* 1761 München; OFMobs 1780; † 18 August 1810 Ingolstadt).

Bryan Higgins (* 1737/41 Collooney in Sigo in Ireland; † 1818/1821).

David Hilbert (* 1862; † 1943 Gottingen).

Friedrich Hildebrandt's (* 1764 Hannover; † 1816 Erlangen).

John Hill (* 1714 Peterborough in Cambridgeshire; † 1775 London).

William Hill (* before 1780; † 1847).
Max Hinterwaldner (* 1844 Schwaz in Tyrol; † 1912).

Philippe de la Hire (* 1640 Paris; † 1718 Paris)

Johannes Hirn (Johan, * 1795 Porvoo between Helsinki and now Russian Vyborg (Wiburg); † 1858 as pastor in Rautalampi 500 km north of Helsinki and St. Petersburg).

Jakob Hirschler (* 1852 Bratislava).

Hugo Hirst (Hirsch, Lord Witton, * 1863 Altenstadt, Bavaria; † 1943).

Lester Larsen Hirst (* 1903 Utah; † 1963) of university of California at Berkeley, later Bureau of Mines in Washington DC.

Johann Wilhelm Hittorf (* 1824; † 1914).

Peter Jacob Hjelm (* 1746; † 1813).

Hoashi Banri (帆 足 萬里, * 1778; † 1852).

Thomas Hobbes (* 1588; † 1679).

Karl Hochenegg (* 27 October 1860 Vienna; † 6 February 1942 Vienna).

Franc Hočevar (* 10 October 1853 Metlika; † 19 June 1919 Graz).

Josef Höck (* abt. 1935), published about Carinthia beginning by his Salzburg PhD in 1966 until 2005.

Lillian E. Hoddeson (* 1940 New York City), obtained her Ph.D. in physics at Columbia University in 1966, taught history of science and technology at University of Illinois in Urbana attached to Fermi National Accelerator Laboratory.

Garry Hodes (* 1948) Professor Emeritus of Department of Materials and Interfaces at Sustainability and Energy Research Initiative (SAERI) at Weizmann Institute of Science.

Jean A. Hoerni (* 1925; † 1997).

Friedrich Hoffmann (* 1660; † 1742).

Josef Hoffmann (* 1854 Ptuj).

Walter Höflechner (* 1943 Celje (Cilli) in Slovenian Styria).

August Wilhelm von Hofmann (* 1818 Giessen; † 1892 Berlin).

Donatus Hofmann a Transfiguratione Christi Domini (Donat, * 1703 Lübschütz in upper Silesia; Piarist; † 1783).

Theodor Hoh (* 1828 Nurnberg; † 1888 Bamberg), professor of physics at Grammar School and Lyceum in Bamberg.

Ludwig Samuel Joseph David Alexander baron Hohenbühel Heufler zu Rasen und Perdonegg (* 1817; † 1885).

Carl Hohenegg (1860 Vienna-1942 Vienna).

Franc Jožef Hanibal Hohenwart (* 24 May 1771 Ljubljana; † 1844 Kolovec).

count Jurij II Sigmund Hohenwart (* 1713).

Sigmund Hohenwart (* 7 June 1745 Celje; † 1825 Linz).

Friderik Wilhelm I king of the House of Hohenzollern (* 1688; † 1740).

Paul H. Holloway, received his PhD at Rensselaer Polytechnic Institute in 1972, former president of AVS, the professor emeritus at Department of Materials Science and Engineering of Florida University, Gainesville where he taught after August 1983, also at Department of Materials Science and Engineering at the University of Tennessee, Knoxville in 1994. In 1995-2001 he patented for at Planar Systems Inc., 1400 NW Compton Drive, Beaverton, OR 97006 formed in 1983 as a spinoff from Tektronix.

Nick Holonyak, Jr. (* 1928 Zeigler, Illinois, U.S.) created the first visible LED as the son of Ruthenian immigrants from the areas of modern Ukraine.

Gilles Holst (* 1886; † 1968).

Wilhelm Holtz (* 15 October 1836 Saatel bei Barth in Mecklenburg; † 1913).

Ferdinand Holweck (Fernand-Hippolyte, * 1890 Paris; † 1941 Paris).

Roderick Weir Home (* 1939) Professor of History and Philosophy of Science at University of Melbourne from 1975 until his retirement in 2002.

Masujiro Honda (本田 増次郎, * January 15, 1866

Misaki-cho, Kume District, Okayama Prefecture, Japan; † November 1925) was a Japanese editor, secretary of Japan Society for Prevention of Cruelty to Animals (Tokyo); trustee of Nippon Club (New York); member of Peace Society Japan, American Peace Society and the Protestant Episcopal Church of Japan. Probably related to the Japanese botanist Masaji Honda (Masazi, 本田正次, Shoji, * 1897 Kumamoto; † 1984).

Peter Honti (* 1907; † 1981).

Robert Hooke (* 1635; † 1703).

Edmund Hoppe (* 1854).

William George Horner (* 1786 Bristol; † 1837).

August Friedrich Horstmann (* 1842 Mannheim; † 1929 Heidelberg).

Don Garzia dall' Horto (Orta, Huerto, * 1490 Portugal; † 1568/1570).

Ivan Horvat (Johann Baptist Horvath, Horváth, * 1732 Günz; SJ 1751 Trnava; † 1799 Pest).

Radoslav Horvat (* 1920 Bečej in Serbian Vojvodina; † 2004 Beograd).

Rudolf Horvat (* 1873 Koprivnica; † 1947 Zagreb).

Caspar Höschel (* 1744; † 1820).

Michael A. Hoskin (* 1930 London).

František Houdek (* 1847; † 1917).

David A. Hounshell (* 1950 USA).

Charlotte Rieffenstahl married Houtermans (* 1899 Bielefeld, Germany; † 1993 Northfield, Minnesota).

Friedrich Georg Houtermans (Fizzl, * 1903 Zappot by Danzig (now Sopot by Gdansk); † 1966).

Sonja Ana Hoyer (* 1945 Murska Sobota).

Pavlo Hrabovsky (* 1864 Pushkarne, Okhtyrka county, Kharkiv gubernia; † 1902 Tobolsk, Siberia).

Silvo Hrast (* 1921 Trieste; † 1999).

Michael Hube (Jan Michał, * 1737 Toruń (Thorn) in Northern Poland; † 1807 Potycz in east-central Poland).

Louis Hubin (* 1628; † 1703).

Franz Hübl, published in 1869-1888 as professor at Grammar School (Gymnasium) in then Habsburgian now Ukrainian Czernowitz (Chernivtsi).

Johann Hübner (* 1668; † 1731).

Eric Hückel (* 1896 Berlin; † 1980 Marburg).

Bishop of Abrincensis (Avranches) in Normandy Peter Daniel Huetius (Pierre Huet, * 1630 Caen; † 1721 Paris).

Maurice Loyal Huggins (* 1897 Berkeley; † 1981 California).

David Edward Hughes (* 1831 London; † 1900).

Howard Hughes (* 1905; † 1976).

Albert Wallace Hull (* 1880 Southington, Connecticut; † 1966 Schenectady, New York).

Gordon Ferrie Hull (* 1870 Garnet in Canada; † 1956).

Alexander von Humboldt (* 1769; † 1859).

David Hume (* 1711; † 1776).

Karl Hummel (Carl, * 1801 Šatov (Schattau) by Znojmo in southern Moravia on Austrian border; † 1879 Graz).

David Leonard Hurd, published in 1964.

Jan Hus (* abt. 1369; † 6 July 1415).

Captain Oliver George Hutchinson (* 1891 Belfast; † 1944).

James Hutton (* 1726; † 1797).

Christiaan Huygens (* 1629; † 1695).

Matija Hvale (Qualle, * about 1470 Vače by Litija (pri Litiji); † 1518 Vienna).

Godfrey M. Hyams (* 1859; † 1927).

Josef Hyrtl (* 1810 Eisenstadt (Železno) in Burgerland; † 1894 Viennese suburb).

I

Isaia Iannaccone (* Napoli), published in 1990-2021 as a resident of Brussels.

Sonja Ifko, professor at the Faculty of Architecture of Ljubljana University.

Sumio Iijima (飯島 澄男, * 2 May 1939 Saitama Prefecture).

Martin Ilkuš (Marcin Bylica, Martin Bylica, Marcin z Olkusza, * 1433 Olkusz (IIlkuš, IIlkuš); † 1493 Buda).

Maximus von Imhof (* 1758 Reisbach in Lower Bavaria; Augustinian 1780-1802; † 1817 Munich).

Pietro Imperati (OSM (*Servite* religious order); † 1605 Bologna).

Pierre Noël Chéron d'Incarville (* 1706; † 1757).

Jan Ingenhousz (Ingen Housz, * 1730 Breda in southern Netherlands; † 1799 Wiltshire).

Marek Inglot (* 1961 Poland; SJ) full professor at the Faculty of History and Cultural Heritage of the Church of the Pontifical Gregorian University.
George Elmer Inman (* 1895 Kenosha, Wisconsin; † 1972).

Pope Innocent XII (* 1615; † 1700).

Orlando Inwinkl (Inwinkel, * 1880 Barban (Barbana) in southern Istria; † 1936 Colombes in the northwest suburb of Paris).

Abundus Maria Inzaghi (Abondio, Abbondio, * Como; † 1691 Graz).

Franc Janez Nepomuk Count Inzaghi baron Kindberg (* 1734; † 1818).

Franz Anton Inzaghi (* 1719; † 1791).

William Irvin (1743; † 1787).

William Irvine (* 1743 Glasgow; † 1787)

William Irvine (* 1776; † 1811).

Paul B. Israel (* 1953 California).

Alexander Konstantinovich Ishkhneli (Александр Константинович Ишхнели, * 1916) studied at Tbilisi University in 1937.

Jan Ivanchich (Ján Ivančič, Johan Ivancisc, * 1722 Komarno in Slovakia; SJ; † 1784 Trnava).

Radmilo M. Ivanković (Радмило М. Иванковић, * 1933 Batina (Kiskőszeg) in Croatian Baranja; † 2017 Beograd?).

Herbert E. Ives (* 1882 Philadelphia; † 1953).

Joseph Izarn (* 1766 Cahors; † 1834 Paris).

Anton Batista Izzo (* 1721 Košice; † 1793 Vienna).

J

Pavel Nikolaevich Jablockov (* 1847; † 1894).

Friedrich Heinrich Jacobi (* 1743; † 10 March 1819 Munich) the father of Maximilian Jacobi.

Maximilian Jacobi (* 1775; † 1858).

William White Jacques (* 1855 Haverhill, Massachusetts; † 1932).

Agatha Maria Jacquin (* 1735).

Joseph Franz Baron Jacquin (* 1766; † 1839).

Nikolaus Joseph Baron Jacquin (* 1727; † 1817).

Francisco Jacquier (* 1711 Vitry-le-François; OM; † 1788 Rome).

Karl von Jaeger (Jäger, * 1936 Carinthia; † 1920 Graz).

Gustav Jäger (* April 6, 1865 Krásná by Aš (Schönbach by Asch) in Bohemia; † January 21, 1938 Vienna).

Louis II Jagiełło (* 1506; † 1526 Mohács).

Władysław III Jagiełło (* 1424 Krakow; king of Poland and Hungary; † 1444 Varna).

Joseph Jagunić (* 1831 Plešivica in Croatia; † 1891).

Boris Jakobi (* 1801; † 1894).

Moritz Herman Jakobi (* 1801; † 1874).

Stjepan Jakšeković (* 1907; † 1985 USA).

Jean Jallabert (* 1712 Geneve; † 1768 Nyon in Switzerland near French border).

Catherine Jami (詹嘉玲, * 1961).

Gilles Celestine Jamin (Jules Célestin Jamin, J. Gamin, * 30 May 1818 Termes; † 12 February 1886).

Johann Jamnički (Jamnicky, † 1881).

Darko Jamnik (* 16 July 1925 Toplice no. 50 near Zagorje by Sava river).

Anton Janežič (* 1828; † 1869).

Radoje Janković (* 1879 Čačak; † 1943).

Zacharias Janssen (Zacharias Jansen, Sacharias Jansen; * 1585 The Hague; † 1632/1638 Amsterdam).

Anton Jarányi (Jaránui, * 1725 Pécs; † 1797 Pécs).

Gabriel Jars (Antoine, * 1732 Lyon; † 1769 Clermont).

Simon Jarz (* 3 April 1842 Sankt Kanzian (Škocijan) no. 8 near Eberndorf (Dobrla vas) east of Klagenfurt).

András Jaszlinszky (Jaslinszky, * 1715 Szinna near Košice; SJ 1733 Košice; † 1784 Rozsnyó (Rosnaviae, Rožnava) in Bohemia).

George François Jaubert (* 1870 Geneva; † 15 February 1959 Chaville in Hauts-de-Seine of north-central France), doctor of science and inventor, chemistry preparer at École polytechnique, president of the Central Apiculture Society, editor the *General review of pure and applied chemistry* with 21 Parisian volumes published in 1899-1918.

Chrysostomus Javellus (Chrysostom Javèlli Canapicus, Grisostomo Javelli, * about 1470/1472 San Giorgio Canavese (Canapicus) in Piedmont; OP 1485; † about 1538 Bologna or Piacenza).

Badīʿ az-Zaman Abū l-ʿIzz ibn Ismāʿīl ibn ar-Razāz al-Jazarī's (بديع الزمان أَبُو اَلْعِزِ بْنُ إسْماعِيلِ بْنُ الرِّزاز الجزري, Jazari, * 1136 Mesopotamia; † 1206 Mosul).

Ányos István Jedlik (Štefan Anián Jedlík, Stephanus Anianus Jedlik, * 11 January 1800; † 13 December 1895).

Francis Jehl (* 1860 New York; † 1941 Florida).

Karl Jelinek (* 1822 Brno; † 1876 Vienna).

Marija Mira Jenčič married Samec (* Vienna; † 1911).

Salvislav Jenčič (* 1891; † 1968).

Sigmund Jencic (Jenčič, * 1679; † 1718).

Charles Francis Jenkins (* 1867; † 1934).

Bojan Jenko, received PhD under Paulin's supervision in Maribor in 1991.

Jožef Jenko (Josef, * 1776; † 1858).

Monika Jenko, wife of Bojan.

Edward Jenner (* 1749; † 1823).

Henning Højgaard Jensen (* 1918 Emb of Blistrup Parish on Mors; † 2001).

Franz Jeschowsky († 29 April 1814 Graz).

Heinrich knight Jettmar (* 1849 Lvov).

Karl Ježek (* 1851 Blansko; † 1919).

Richard Ježek (* 1860 Blansko; † 1948).

Numata Jirō (沼田次郎, * 1912; † 1994).

Jean-Baptiste-Ambroise-Marcellin Jobard (* 17 May 1792 Baissey in France; † 27 October 1861 Brussels).

Steve Jobs (* 1955; † 2011).

Abram Fedorovich Joffe (Ioffe, A.Ф. Иоффе, * 1880 Romny (Ромни́) in northern Ukraine; † 1960 Leningrad).

Helmut Johannson († 1982).

Johann Friedrich John (* 1782 Anklam; † 1847 Berlin).

John Bertrand Johnson (* 1887).

Walther H. Johnson (Walt), the engineer working for KLA-Tecnor at Prometrix Corp. in Santa Clara, CA.

Henry Bence Jones (* 1813; † 1873 London).

Georg Jonke (* 1777 Gorenje (Obern) No. 4 in Carniola; † 1864).

Johann Quentin I Jörger von Tollet (* 1624; † 1705).

Chandrasekhar "Chan" Janardan Joshi (* 1953 Wai, Maharashtra, India) did pioneering work in plasma-based particle acceleration techniques at UCLA for which he won the 2006 James Clerk Maxwell Prize for Plasma Physics.

Gregor Jotzu (* 1986 Bad Homburg, Germany), obrained Ph.D. in Physics at ETH in 2015.

Jules François Joubert (* 1834 Tours; † 1910 Paris).

Marquis Achille Jouffroy d'Abbans (* 1785; † 1859 Torino).

Marquis Claude de Jouffroy d'Abbans (* 1751; † 1832 Paris).

James Prescott Joule (* 1818; † 1889).

Branimir Jovanović (* 1955 Beograd).

Dragoljub Jovanović (* 1891; † 1970).

Johann Juncker (* 1679 Londorf; † 1759 Halle).

Christa Jungnickel (* 1935 England; † 1990) married to Russell McCormmach.

Anton Jungnitz (* 1764 Męcince (Hermannsdorf); † 1831 Wroclaw).

Josefine Jurik from Košaki north of Maribor (Leitersberg bei Marburg from 2008 part of Maribor city), as Catholic politician edited and published in 1880-1893 mostly in Maribor (Marburg) and in Slovenj Gradec (Windischgraz) in lower Styria.

Bernard Jussieu (* 1699 Lyon; † 1777 Paris).

Alexander Friedrich Just (Just Sándor Frigyes, * 1874 Bremen; † 1937 Budapest).

K

Boris Borissowitsch Kadomzew (Борис Борисович Кадомцев, Kadomtsev, * 1928 Pensa; † 1998 Moscow).

Georg Wilhelm August Kahlbaum (* 1853 Berlin; † 1905 Basel) chemist and historian of chemistry, younger son of the owner of chemical manufacture August Wilhelm Kahlbaum (* 1822; † 1884),

Dawon Kahng (* 1931 Seoul; † 1992 New Jersey).

Tiangong Kaiwu (* 1587; † 1666).

Rafael Kalish, former researcher at Laboratory for Nuclear Science at Massachusetts Institute of Technology in Cambridge, emeritus at Solid State Institute and Physics Department, Technion—Israel Institute of Technology in Haifa.

Heike Kamerlingh-Onnes (* 1853; † 1926).

Simon Kapferer de Lypnica, OFM, taught in Innsbruck college (in conventu ad S. Crucis) of Tyrolean Franciscan province in 1774-1778.

Pietro Kandler (* 1804 Trieste; † 1872 Trieste).

Hans Kangro (* 1916 Leipzig; † 1977 Bad Bevensen).

August Kann (* February 19, 1871 Vienna; † September 11, 1937).

Ana Mayer married Kansky (Anka, * 1895 castle Lože by Vipava; † 1962).

Evgen Kansky (* 1926 Ljubljana; † 1987).

Evgen Kansky (* 1887 Warsaw; † 1977).

Simon Kapferer (named by the Saint Simon of Lipnica Murowana by Krakow in Silesia, * 3 March 1752; OFM Hall in Tyrol 5 km east of Innsbruck; † 1824 as secular priest).

Pjotr Leonidovich Kapica (Kapitsa, Peter Kapitza, Пётр Леонидович Капица, * 1894; † 1984).

Jovo Kapičić (Kapa, * 1919 Gaeta in central Italy south of Rome; † 2013 Beograd).

Heinrich Kappeller the younger inherited his firm from his father who established it in 1830s at Wien V Margareten, Franzensgasse 13 later also at V Bezirk Kettenbrückengasse 9 and in Budapest outpost to produce the clockworks, thermometers, and weather houses in 1850s-1913 by his Institut für physikalische und meteorologische Instrumente.

Johann Kapsch (Kapš, Kapsh, * March 1, 1845 eastern Kočevje areas of modern Slovenia (Unterlag (Spodnji Log) no. 12, Graflinden (Knežja Lipa) or Uršna Sela southeast of Dolenjske Toplice); † September 28, 1921 Vienna).

Franciscus Xaverius Kareau (Karü, * 1731; † 1802).

Josef Kareis (* 1837 Semice (Semitz) in Bohemia; † 1913 Vienna).

August Karolus (* 1893 Reihen by Sinsheim, Germany; † 1972 Zollikon, Switzerland).

Franc Ksaver Karpe (Samuel, * 17 November 1747 Ljubljana; † 19 June 1806).

Abraham Gotthelf Kästner (* 1719 Leipzig; † 1800 Göttingen).

Karl Wilhelm Gottlob Kastner (* 1783; † 1857 Erlangen).

Marin Katalinić (* 1887 Trogir; † 1959 Skopje).

Michael Kauffer (* 1673; † 1756).

Walter Kaufmann (* 1871; † 1947).

Prince Wenzel Anton count Kaunitz-Rietberg (* 2 February 1711; † 27 June 1794).

Luise Ronsperger married Kautsky (* 11 August 1864 Vienna; † 8 December 1944 Auschwitz (Oświęcim)) the wife of Karl Kautsky (* 1854 Prague; † 1938 Amsterdam).

William Kay (* 1879; † 1961).

Heinrich Gustav Johannes Kayser (* 1853; † 1940).

Barholomew Keckermann (* 1571/1573 Gdansk (Danzig); † 1609 Gdansk).

Bonifaty Mikhailovich Kedrov (Бонифáтий Михáйлович Кéдров, * 1903, Yaroslavl (Ярослáвль); † 1985 Moscow) joined the Bolsheviks in 1918 to become the philosopher, logician, chemist, psychologist. He criticized Stalinism and Khrushchev in 1956.
Fedor Borisovič Kedrov (Федор Борисович Кедров, * 1912), after graduating from the Faculty

of Physics and Mathematics at the University he authored several biographical books about scientists and engineers: Rutherford, Frederic and Irene Joliot-Curie, Kapitsa, Frenkel, I.G. Alexandrov (Ива́н Гаври́лович Алекса́ндров (* 1875; † 1936), B.E. Vedeneev (Борис Евгеньевич Веденеев (* 1885 Tbilisi; † 1946 Moscow), etc.

William Andrew Keenan worked for EEESPEC at Prometrix Corp. in Santa Clara, CA.

Friedrich Keesbacher (* 1831 Schwaz in Austrian Tyrol; † 1901 Ljubljana).

Willem Hendrik Keesom (* 1876 Texel; † 1956 Leiden).

John Keill (* 1671 Edinburg; † 1721 Oxford).

Friedrich August Kekulé von Stradonitz (* 1829 Darmstadt; † 1896 Bonn).

Andrew Keller (* 1925 Budapest; † 1999).

David Kellner (* 1643; † 1725).

Paul Joseph Kelly (* 1915 Riverside, California; † 1995 Santa Barbara, California) the mathematician in Santa Barbara.

William Kelly (* August 21, 1811 Pittsburgh, Pennsylvania; † February 11, 1888) studied metallurgy at the Western University of Pennsylvania.

Sir William O'Kelly (Guillermo (Giulo, Guilelmi) O'Kelly, Hibernia, ex familia O'Kelliorum ab Aghrim, William O'Kelly of Aughrim, chevalier of the Holy Roman Empire, hereditary Lord of Culagh and Ballinahown, Count Palatine Imperial and Inspector of Arms of His Imperial Royal Majesty, * abt. 1670 Aughrim, county Galway; † 1751) studied humanities at Louvain University and philosophy at Paris. He settled in Vienna in 1698 as a friend and adviser to Emperor Leopold. His descendant Ludvik Mac Neven baron De Cranagh O'Kelly ab Aghrim (* 1795 Prague; † 1873 Ljubljana) as a District Chief in Postojna married Victoria Elizabeth Codelli at Kodeljevo Castle of Ljubljana on November 4, 1835.

William Thomson Kelvin (* 1824; † 1907), after the year 1892 Lord Kelvin.

Rankin D. Kennedy (* 1853/54; † 1917 Isle of Bute).

David T. Kenney (* April 3, 1866; † 1922) born in the family of Irish immigrants in the USA.

Johannes Kepler (* 1571; † 1630).

Stefan Keresztes (* 26 December 1600 Žitný Ostrov (Csallóköz) in Slovakia north of Györ; SJ).

Francizek B. Keri (Franc Borgia Kéri, Ferenc Kéry, * 1702 Kenyerköe (Kenézlő) in Borsod-Abaúj-Zemplén County in northeastern Hungary; SJ 1719 Košice; † 1768 Trnava).

Johann Gottlieb Kern († 1775?).

John Kerr (* 1824 Ardrossan, Scotland; † 1907 Glasgow).

Anton Kerschel (Kršl, * 30 May 1790 Idrija; † 22 May 1847 Gorizia).

Janez Krstnik Kersnik (* March 26, 1783, Moste pri Žirovnici in Upper Carniola (Gorenjska); † 24 June 1850 Ljubljana).

Donald William Kerst (* 1911 Illinois; † 1993).

Robert Eugene Kerwin (* 1932 Wallaston, MA), member of the Technical Staff at Bell Telephone Laboratories from 1958 to 1967.

Ferenc Kéry (Kéri, Keri, Franc Borgia, * 1702 Kenézlő in northeastern Hungary; † 1768 Trnava).

Konrad Keyser (Conrad Kyeser, * 1366 Eichstätt in Bavaria; † after 1405).

Joseph Khell von Khellburg (* 1713 Linz; † 1772 Vienna).

Iosif Benzionovich Khriplovich (Иосиф Бенционович Хриплович, * 1937 Kiev).

Boštjan Kiauta (Bastian, * 1937 Ljubljana).
Ladko Kiauta (Ladislav, * 1914; † 1990).

Boris Kidrič (* 1912 Vienna; † 11 April 1953 Belgrade).

France Kidrič (* 1980; † 1950).

Franz Kiebitz (*1878 Bautzen in east Saxony; † 1962).

Jack StClair Kilby (* 1923 Missouri; † 2005 Dallas).

Philip Andreas Killian (* 1714 Augsburg; † 1759 Augsburg).

Edward Augustin King (* 1814 Cambridge, Washington County, New York in USA; † 1863 battlefield of Chickamauga, Georgia in USA).

Kenneth Hay Kingdon (* 1894 Montego Bay in Jamaica; † 1982 Schenectady).

Gottfried Aloys Kinner von Löwenthurn (* 1610 Reichenbach, Silesia (now Dzierżoniów in southwestern Poland); † after 1669 Prague?).

John Jervis Kipling published in 1964-1965.

Athanasius Kircher (* 2 May 1601/1602, Geisa; SJ 1618, Paderborn; † 1680, Rome).

Gustav Robert Kirchhoff (* 1824; † 1887).

Georg Caspar Kirchmaier (* 1635; † 1700 Wittenberg).

Richard Kirwan (* 1733; † 1812).

László Kiss (* 1950 Šahy (Ipolyság) in southern Slovakia) district doctor in Čiližská Radvaň (Csilizradvány) in the Trnava Region of south-west Slovakia.

Erasmus Kittler (* 1852 Nurnberg; † 1929 Darmstadt).

Rudolf Kladnik (* 1933 Hrastnik; † 1995 Ljubljana).

Hendrik Anne Klasens (Klassens) obtained his PhD at Groningen University in 1941 to work for Philips Research Laboratories.

Johann Baptist Klauber (* 1712 Augsburg; † 1787).

Donald L. Klein (* December 19, 1930 Brooklyn, NY), son of a Hungarian father and a Hungarian-American mother.

Felix Klein (* 1849; † 1925).

Joseph Frederic Klein (* 1849 Paris; † 1918 Bethlehem, Pennsylvania), professor of mechanical engineering at Lehigh University in Bethlehem as Gibbs’ friend.

Ludwig Kleinberg (* Boryslaw in western Ukraine; † 1920 Vienna).

Andreas Kleinert (* 1940 Opole (Oppeln) in Upper Silesia of south Poland).

Karin Stana Kleinschek obtained her PhD degree from the Institute of Physical Chemistry of the University of Graz, Austria in 1996.

Ewald Jürgens von Kleist (* 1700; † 1748).

Karl Klekler (* 1842 Wiener Neustadt; † after 1901).

Alfons Klemenc (* 1885 Spodnja Šiška by Ljubljana; † 1960).

Ignac Klemenčič (* 1853; † 1901).

Peter Klinar (* 1934 Ljubljana; † 1994 Kranjska Gora).

Pieter Frits Abraham Klinkenberg (* 1915 Amsterdam; † 2005).

Klaus von Klitzing (* 1943).

Aaron Klug (* 1926; † 2018).

Matej Daniel Kmet (Kmetch, * 1783 Brezno in cenral Slovakia; Piarist; † 1825 Košice).

Josip Fran Knaflič (* 1879 Šmatno by Litija; † 1949 Ljubljana).

Baltasar Knapič (Balthasar, Baltazar Knapitsch, Knappitsch * 26 November 1848 Viktring (Vetrinj) no 18, southern suburb of Klagenfurt; † 14 April 1914 Schwimmschulkai no 6 north of Graz city center) published on chemical analysis of Carniolan waters in 1877-1893 in Ljubljana real school reports, retired as director of secondary school.

Sebastian Kneip (* 1821; † 1897).

Paul Knipping (* 1883; † 1935 Darmstadt).

Eberhard Knobloch (* 1943 Görlitz).

Gustav Knobloch flourished 1876-1907, then retired in Graz.

Max Knoll (* 1897; † 1969).

Martin Knudsen (* 1871; † 1949).

Andrej Kobav (Kobal, * 7/11 November 1591 or 1593 Cerknica; SJ 22 October 1610 Brno in Moravia; † 12 February 1654 Trieste (Trst)).

Matija Ahacel Kobentar (* 1779; † 1845).

Gvido(n) Kobencl (Guodobald Cobenzl, * 1716 Ljubljana; † 1797 Gorizia).

Janez Gašpar Kobencl (Cobenzl, * 30 May 1664/1669 Lože pri Vipavi; † 20/30 April 1742 Graz).

Count Janez Filip Kobencl (Cobenzl, * 1741, Ljubljana; † 1810).

Janez Karl Filip Kobencl (Cobenzl, * July 21, 1712 Ljubljana; † January 27, 1770 Brussels).

Ludvik count Kobencl (Cobenzl, Johann Ludwig Joseph, * 21 November 1753 Brussels; † 22 February 1809 Vienna).

Kasandra countess Kobencl, married Coronini (Cobenzl, * 1703; † 1788).

Robert Koch (* 1843; † 1910).

Emil Theodor Kocher (* 1841 Bern; † 1917).

Rudolf Albert von Koelliker (Kölliker, * 1817 Zürich; † 1905 Würzburg).

Franc Koestl (Köstel, * 1811 Cerklje in Upper Carniola; † 1882 Graz).

Otto Kofoed-Hansen (* 1921; † 1990).

Alfred Kohler (* 1943 Vienna), professor of modern history at Viennese University.

Thomas Köhler (Koehler) of AG Theoretische Physik, Fachbereich Physik, Univ.-GH Paderborn, Germany.

Rudolph Kohlrausch (* 1809 Göttingen; † 1858 Erlangen).

Ernst Arnold Kohlschütter (1883 Halle-1969 Bonn).

Wojciech Kojałowicz (Albertas Vijūkas-Kojelavičius, * 1605 Kaunas (Kowno); SJ 1627 Vilnius (Vilno); † 1677 Warsaw).

M.J. Kokalj, Lower Styrian technical correspondent of Maribor magazine *Zora*.

Jože Kokole (* 1937 Ljubljana), librarian.

Metoda Kokole, head of the Musicology institute at ZRC SAZU (SRC SASA).

Andrew of Kokorzyn (* 1379; † 1435).

František Koláček (* 1851 Slavkov u Brna (Austerlitz) in Moravia; † 1913 Prague), E. Mach's student.

Metod Kolar (* 1985), obtained his PhD under supervision of Miran Mozetič, Alenka Vesel and Karin Stana-Kleinschek in 2015.

Alan Charles Kolb (* 1928 Hoboken, NJ; † 2006 Rancho Santa Fe), head of a new Naval Research Laboratory in Washington DC, Plasma Physics Division in 1959. Created the new field of Pulsed

Power as science-technology concerned with very high power electrical pulses of the order of terawatts. Andreas Koller, manager of the Baron Žiga Zois' ironworks in Bohinjska Bistrica as father of Marian.

Ignatius Koller (Choler, * 1684 Linz; SJ 1699 Linz; † 1750 Vienna).

Marian Koller (baptized Wolfgang, * 31 October 1792 Bohinjska Bistrica (Feistritz) no. 87 in Upper Carniola; OSB 1816 Kremsmünster; † 19 September 1866 Vienna).

Franz Kollman (* 1839; † 1908).

Robert Kollman (* 1872; † 1932).

Anna Kołos (* 1987 Oleśnica in Poland).

Jan Amos Komenski (Comenius, Komenský, * 1592; † 1670).

Stanislav W. Kon (Станислав Викентьевич Кон, Konn, † 1876).

Heinrich Matthias Konen (* 1874 Cologne, † 1948 Bad Godesberg), professor at University Münster from 1905 to 1920, then he replaced Kayser at Bonn University.

Johann Samuel König (Koenig the younger, * 1712 Büdingen, Germany; † 1757 Zuilenstein near Amerongen, Netherlands), son of Samuel Heinrich König (* 1671 Gerzensee by Bern; † 1750 Bern).

Walter König (* 1859; † 1936).

Wenzel König (Venčeslav, * 1836; † 1901).

David Kurt Konstantinowsky (* 1892 Vienna; † London?).

Josip Kopinič (* 1911 Radoviči by Metlika; † 1997 Ljubljana).

Isak Kordić (Iso, * abt. 1856 Gornji Kosinj 25 km north of Gospić).

Arthur Korn (* 1870 Wroclaw; † 1945 Jersey City, New Jersey).

Henrik Viljem Korn (Wilhelm Heinrich, * 1754/1755 Maastricht in the Netherlands; † after 1821 Ljubljana?).

Branko Korošec (* 1927 Radovljica; † 1999 Ljubljana).

Jan Klaas Van der Korst (* August 25, 1931 Groningen, Nederland; † December 27, 2013 Loosdrecht, Nederland).

Simon Kos (Koss, * 1828 Kostrivnica near Rogaška Slatina in Lower Styria).

Sava Kosanović (* 1894; † 1956).

Thomas Koschat (* 1845 Viktring (Vetrinj) near Klagenfurt; † 1914).

Dragutin Kössler (Karl Koessler, * 1842) went to the royal Real School in Zagreb on 29 September 1873 while Juraj Bauer replaced him as professor of physics and mathematics at higher Grammar School Rijeka.

Josef Kössler (Joseph Koessler, Kessler, Kössler, * 1711 Bressanone (Brixen) in Tyrol; SJ 1728 Vienna; † 1771 Vienna).

Lado Kosta (* 11 February 1921 Strnišče by Ptuj refugee camp; † 1986).

Matevž Košir (* 1964 Kranj).

Martin Kothe († 1851 Köln).

Viktor Kotnik (* 1910 Zgornji Jakobski Dol; † 1991 Ljubljana).

Friedrich Theodor Kötteritzsch (* 1814 Bischofswerda at the western edge of Upper Lusatia in Saxony; † 1875) district physician in Pappendorf and 15 km eastern Freiberg in Saxony.

Ernst Theodor Kötteritzsch (* 1841 Pappendorf), the son of Friedrich Theodor, acquired PhD in Jena in 1868, published about electrostatics in 1868-1885, taught at Real Grammar School in Freiburg (Freiberger Realgymnasiums) in 1872-1882.

Janez Kovač (* 1965).

Zoran L. Kovačevič (* 1935 Popinci by Pećinci (Попинци) in Srem, Vojvodina), a biochemist.

Lojze Kovačič (* 1951 Delnice in Gorski Kotar; SJ 1968 Dubrovnik/Ljubljana; † 2010 Borovnica by Ljubljana).

Alexandre Koyré (Alexander Koyre, Aleksander Vladimirovič Kojrakski, Александр Владимирович Койракский, * 1892 Taganrog in Russia; † 1964 Paris).

Venčeslav Koželj (* 1901; † 1968).

Johann Daniel Krafft (Kraft, Crafft, * 1624 Werheim; † 1697 Amsterdam).

Helge Stjernholm Kragh (* 1944 Copenhagen), a Danish historian of 19th century physics, chemistry, and astronomy. He earned his Ph.D. in physics in 1981 at the University of Roskilde in Denmark where he taught.

Boris Kraigher (Janez, * 1914 Sveta Trojica in Slovenske gorice; † 1967 Sremska Mitrovica).

Jurij Kraigher (Žore, Georg George, * April 3, 1891 Hrašče by Postojna, † September 17, 1984 Litchfield, Connecticut, United States).

Bernhard Kramer (* 1942 Naumburg (Hessen)) professor of theoretical physics, mostly in Dortmund, Braunschweig, Hamburg, and Bremen.

Jean-Baptiste Krantz (* 1817; † 1899 Paris).

Janez Jurij Krasnik (Joann Georg Krassnigg, Gonovuicensi, Gonobitz, * abt. 1672 Slovenske Konjice (Gonobitz, Gonovicensi) 17 km northeast of Celje in Lower Styria).

Tjaša Kraševac Glaser (* 1985).

Gregor Kraškovič (* 3 March 1767 Studenec at Bloke in today's Župan (Mayor's) house; † 1823 Pale by Dubrovnik).

Günther Kratky (* 1919 Faak am See near Villach (Beljak); † 1984 Graz).

Joseph Kraus (* 9 November 1678 Neumarkt in Styria along the upper Mura River; SJ 6 October 1696 Judenburg; † 16 November 1718 Osijek).

Emanuel Kregez (Kregetz, * 1829 Rakovník (Rakonitz, Rakonic) in the central Bohemia).

Karl Kreil (* 1798; † 1862 Vienna).

Johann Kremenezky (Kremenetzky, Josef Josefowitsch Leibensohn, * 1848 Odessa; † 1934 Vienna).

Franz Kreminger (* 27 October 1835 (or 1836) Pančevo; † 23 December 1915 Vienna) as former N. Tesla's teacher in Rakovac taught Ivan Cankar mathematics and geometric drawing (geometrische Zeichnen) in German language in 6th grade in 1892/1893, and mathematics in Cankar's last 7th grade in Ljubljana real school in 1893/1894.

Adolph knight Kriegs (later baron, * 1819 Vienna; † 1884 Vienna).

Friedrich Christian Kries (*1768 Thorn; † 1849 Gotha).

Joseph Krist (* 1830 Stará Ves (Altendorf) in Moravia; † 1899 Graz).

William Justin Kroll (Guillaume, * 1889 Esch/Alzette, Luxemburg; † 1973 Brussels).

Herbert Krömer (Kroemer, * 1928 Weimar).

Leopold Kronecker (* 1823; † 1891).

Franz Krones Ritter von Marchland (* 1835 Uherský Ostroh (Ungarisch-Ostrau) in Bohemia; † 1902 Graz).

August Karl Krönig (* 1822; † 1879).

Djordj Krstić (* 1936 Novi Sad; † 2014 Kranj).

Johann Heinrich Krüsi (John Krusi, Cruz, * 1843 Heiden, Appenzell in Switzerland; † 1899).

Martin David Kruskal (* 1925 New York; † 2006 Princeton).

Janko Krušič, graduated at the Machine Engineering faculty in Ljubljana, worked on the problems of production of moulds for acrylic artificial teeth in 2000, three years later with Navinšek patented their procedure for surface hardening of hard-coated dental models.

Richard Küch (* 1860 Salmünster 40 km northeast of Hanau; † 1915 Hanau).

Josef Ritter von Kudler (* 1786 Graz; † 1853 Vienna).

Pavel Stepanovič Kudrjavcev (Павел Степанович Кудрявцев, Па́вел Степа́нович Кудря́вцев, * 1904 Bronnitsy (Бро́нницы) 50 km southeast of Moscow; † 1975 Tambov (Тамбов) in Central Russia) of Tambov State University now named after G. R. Derzhavin (TSU, Derzhavin Tambov State University, Тамбовский государственный университет имени Г. Р. Державина), author of first Soviet monograph about History of Physics heavily criticized by the philosopher, logician, chemist and psychologist Bonifaty Mikhailovich Kedrov.

Anton Kuhelj (* 11 November 1902 Opčine in Municipality of Trieste; † 31 July 1980 Ljubljana).

Thomas Kuhn (Samuel, * 1922; † 1996 Cambridge).

Werner Kuhn (* 1899 Maur am Greifensee; † 1963 Basel).

Hans Kuhn (* 1919 Berne; † 2012).

Klemen Kukec (Clemens Kukitz, * about 1500 Metlika; † 1541 Vienna).

Panteleimon Oleksandrovych Kulish (Panteleymon Kuliš, Пантелеймон Куліш, * 1819; † 1897).

Kosta Kulišić (Kosto, Konstantin, Коста Кулишић, * abt. 1856; † after 1937 Sarajevo or Dunrovnik?)

Jurij Kunaver (* 1933).

Pavel Kunaver (* 1889 Ljubljana; † 1988 Ljubljana).

Johann Kunckel von Löwenstern (Kunkel, * 1630/1638 Wittenberg by Plön or nearby Hütten in Schleswig-Holstein); † 1703 Stockholm).

August Adolf Eduard Eberhard Kundt (* 1839; † 1894).

Maria Kunic married von Gerstmann and remarried von Love (Kunitz, Cunitz, Löwen, Lowen, * 1610 in Wołów in Polish Silesia; † 1664 Byczyna **(**Pitzen, Pitschen) in Poland).

August Kunzek Edler von Lichton (* 1795 Klimkovice (Königsberg) in the Moravian Silesia; † 1865).

Igor Vasiljevič Kurčatov (* 1903; † 1960).

Miroslav Kurelac (* 1926 Zagreb; † 2004 Zagreb), archivist and historian.

Primož Kuret (* 1935 Ljubljana).

Friedrich K. Kurylo, flourished 1959-1989, his collection of documents about Braun were arranged in the Huntington Library, Art Collections, and Botanical Gardens, Manuscripts Department, 1151 Oxford Road, San Marino, California in 2013.

Émile Küss (Kuss, * 1815 Strasbourg; † 1 March 1871 Bordeaux).

Valentin Kušar (* 1873 Rateče by Škofja Loka; † 1962)

Dušan Kuščer (* 1920; † 2012).

Ivan Kuščer (* 1918 Vienna; † 2000 Ljubljana).

Karl Kuzman (* 1941 Vitanje northeast of Celje halfway to Žreče).

Boris Grigorievich Kuznecov (Kouznetsov, Борис Григорьевич Кузнецов. * 1903 Dnipro (Дніпро, Днипро́, Днепр, Dnepr, former Dnipropetrowsk, Дніпропетровськ, Днепропетровск, Dnepropetrowsk) in Ukraine; † 1984 Moscow).

Franc Kvaternik (* 1919 Osilnica; † 1981).

Konrad Kyeser (Conrad Keyser, * 1366; † after 1405).

L

Johannes from Laaz (* about 1380 Ledce (Laz, Laqtz) south of Brno).

Nicolas Louis de Lacaille (La Caille, * 1713 Rumigny; † 1762 Paris).

Abbé Paul-François Lacoste (sometimes mistakenly noted as Pierre, * 1755 Plaisance-du-Touch near Toulouse; † 1826 Clermont-Ferrand).

Sylvester François Lacroix (* 1765; † 1843).

Irena Lačen Benedičič (* Dravsko Polje in Slovenian Styria), director of Upper Sava River (Zgornjesavski) Museum in Jesenice.

Diogene Laerzio (* 180; † 240).

James M. Lafferty (* April 27, 1916 Battle Creek, Michigan; † 2006).

Giulio Cesare Lagalla (La Galla, * 1571 Padula by Salerno; † 1624 Rome).

Sven Torbjörn Lagerwall (* 1934).

Alessandro Laguzzi (* 1946; † 2018 Ovada in the Province of Alessandria in the northern Italian region Piedmont).

France Lah (* 30 May 1923 Prvenci 5 km east of Ptuj; † 25 September 1998 Ljubljana).

Ivo Lah (* 1896 Štrukljeva vas; † 1979 Ljubljana).

Gottfried-Xavier Laimbeckhoven (Nan Hoai-Jen Ngo-Te, * 1702 Vienna, SJ 27 January 1722 Vienna; † 22 May 1787 Tangjiaxiang by Songjiang east of Shanghai (T'ang-kia-hiang pi Su-choua) in China).

Gerard de Lairesse (* 1641 Liège; † 1711 Amsterdam).

Henry Harris Lake, of the firm Haseltinc, Lake & Co., Patent Agents, 45, Southampton Buildings, in the County of Middlesex, Tesla's alternating current motors patent agent in UK in 1889-1898, active in 1879-1903.

Jérôme Lalande (* 1732; † 1807 Paris).

Joannis Baptist Lalangue (Ivan Krstitelj, Jean Baptiste, * 1743 Matton in then grand duchy of Luxemburg now Matton-et-Clémency in eastern France; † 20 May 1799 Varaždin).

Franc Josef count Lamberg (Jožef, adopted by the baron Langenmantl of Kostel manor in 1680, * 1673 Ortnek; † 1746).

Johann Heinrich Lambert (* 1727; † 1777).

Gabriel Lamé (* 1795; † 1870).

Johann Lamont (* 1805 Corriemulzie in Scottland; † 1879 Munich, Germany), the researcher of magnetism of earth, early observer of Neptune.

Anton Lampe (* 1868 Pest; † 1938).

Frančišek Lampe (*1859 Zadlog between Idrija and Ajdovščina; † 1900 Ljubljana).

Bernard Lamy (* 16 June 1640 Le Mans; SJ; † 19 January 1715 Rouen).

Francesco de Lana Tertio (Terzi, * 1631; SJ; † 1687).

Lev Davidovich Landau (Davidovič, * 1908 Baku; † 1968 Moscow).

John Joseph Lander (* 1918).

Marsilio Landriani (* 1751 Milano; † 1827 Vienna).

Timothy Lane (* 1743; † 1807).

St. George William Lane Fox-Pitt (Lane-Fox, * 1856 Malta; † 1932 South Eaton Place in London).

Victor E. von Lang (* 1838 Vienna; † 1921 Vienna).

Bruno Albert Lange (* 1903 Berlin; † 1969 Berlin).

Fritz Lange (* 1899 Berlin; † 1987 Berlin).

Paul Langevin (* 1872; † 1946).

Irving Langmuir (* 1881; † 1957).

Heinrich von Langenstein (Heinrich Heinbuche, Heinrich von Hessen der Ältere (the senior), * 1325 Langenstein by Marburg in Hessen; † 1397 Vienna).

Sir Edwin Ray Lankester (* 1847 London; † 1929 London).

Joseph Lanzoni (* 1663; † 1738).

Pierre-Simon Laplace (* 1749; † 1827).

Ralph Eugene Lapp (* 1917 Buffalo; † 2004) Manhattan project worker turned pacifist critics of the scientific elite.

Joseph Larmor (* 1857; † 1942).

Lawrence A. Larson of American Institute of Physics and American Vacuum Society.

Danilo D. Lasič (Dan, Laki, * 1952 Ljubljana; † 2000 California).

Dušan Lasič (* 1908 Gorizia (Gorica); † 1980 Vrsar).

Vida Jelka Tom married Lasič (* 1920 Zagorje ob Savi; † 1997 Ljubljana).

Antun Laska (Láska, * 1844/1847 Borohrádek (Heideburg) in the Bohemian Hradec Králové Region; † 1908 Osijek).

Václav Laska (Láska, * 1862 Prague; † 1943 Řevnice (Rzewnitz)).

Alonso Carrillo y Lasos (* 1582; † 1628 Córdoba).

Niels Ove Lassen (* 1914 Hammel; † 2008).

Jay T. Last (* 1929 Butler in Pennsylvania).

Max von Laue (* 1879; † 1960).

Robert Betts Laughlin (* 1950).

Bonaventura de Launoy printed in Offenbach by Frankfurt on Main in 1685-1724.

Luka Lavtar (* 1846; † 1915).

Antoine Laurent Lavoisier (* 1743; † 1794).

Harold B. Law (* 1911 Douds in southeast Iowa; † 1984 near Hopewell, New Jersey).

Ernest Orlando Lawrence (* 1901; † 1958).

John David Lawson (* 1923 Coverntry; † 2008).

Žarko Lazarević (* 1961).

Anton Lazari (Avguštin, * 1642 Ljubljana; OFM 1658; † 24 August 1705).

John Leard (Laird, * 1760; † 8 October 1843).

Alexandre Claude Martin Lebaillif (Le Bailiff (Lebailiff, Leballif, Baillif, * 1764 Saint-Fargeau; † 1831).

Petr Nikolaevich Lebedev (* 1866; † 1912).

Drago Lebez (* 1922 Borovnica; † 2015).

Félix Leblanc (* 1813 Firenze; † 1886 Paris).

Maurice Leblanc (Le Blanc, * 1857 Paris; † 1923 Paris).

Carl Lebmacher (* 1876 Kirschentheuer in Rosental; † 1943 Klagenfurt).

Giovanni Antonio Lecchi (* 1702; SJ; † 1776).

Ernst Lecher (* 1856; † 1926).

Georges Leclanché (* 1839; † 1882 Paris).

Leon Lederman (* 1920 New York; † 2018).

Jean Rodolph Lefèbvre (Faber, * about 1580; † 1650).

Louis Léger (* 1843; † 1923).

Adolph Lehmann (* 1828 Wroclaw (Breslau); † 1904 Vienna).

Gottfried Wilhelm Leibniz (* 1646; † 1716)

Johann Gottlob Leidenfrost (* 1715; † 1794).

Gustav Engelbert Leithäuser (* 1881 Hamburg; † 1969 Berlin).

Joseph-Adrien Lelarge de Lignac (* 1710 Poiters; † 1762)

Benoit Lelong (Benoît), Université Paris-8, France, Faculty Member of CÉMTI (Centre d'études sur les médias, les technologies et l'internationalisation) department, published on sociology, history of science, and information communication in 1995-2020.

Louis Lemery (Lémery, * 1677; † 1743).

Nicolas Lemery (Lémery, * 1645 Rouen; † 1715 Paris).

Philipp Lenard (* 1862; † 1947).

Étienne Lenoir (* 1744; † 1832).

Robert Nicol Lennox (* 1861 Killin on Loch Tay in Perthshire in Scotland).

Augustin Gottfried Ludwig Lentin (* 1764 Dannenberg in Lower Saxony; † 1823 Sülbeck near Eimbeck).

Emil Lenz (* 1804 Tartu; † 1865 Rome).

Wilhelm Lenz (* 1888; † 1957).

Mihail Alexandrovich Leontovich (* 1903; † 1981).

Antoša Leskovec (* 1928 Radovljica; † 2007 Maribor).

Ivana Bizjak married Leskovec (* Cerkno) published in 1981-2021.

Sir John Leslie (* 1766; † 1832).

William Garrow Lettsom (* 1805; † 14 December 1887).

Leucippus from Miletus (Leukip, * 490 BC).

Jean Leurechon (* 1591 Bar-le-Duc; SJ; † 1670 Pont-à-Mousson).

Adrijan Levstik (* 1939 Brežice).

Vadim Leonidovič Levšin (W. L. Lewschin, Leonidovich Levshin, Вадим Леонидович Левшин, * 1896 Korcheva (Корчевá) abandoned and mostly submerged under the waters of the reservoir in 1936; † 1969 Moscow).

George Lewis (* abt. 1970 UK) University of Leicester's School of History and Centre for American Studies.

Gilbert Newton Lewis (* 1875; † 1946 Berkeley).

Ernst Friedric Leybold (* 7 November 1824 Rothenburg on Tauber; † 10 February 1907 Cologne).

Marie born Völker married Kothe remarried Leybold (* 1 November 1830 Köln; † 14 October 1890 Köln).

Franz von Leydig (* 1821 Rothenburg ob der Tauber; † 1908 Rothenburg).

Fortunio Liceti (* 1577 Rapallo; † 1657 Padua).

Georg Christoph Lichtenberg (* 1742 Ober-Ramstadt by Darmstadt; † 1799 Göttingen).

Ludwig Christian Lichtenberg (* 1737 Ober-Ramstadt by Darmstadt; † 1812 Gotha).

Maria Josepha countess Khuen von Belasi zu Auer und Lichtenberg (* 4 August 1721 Hall by Innsbruck; † 1 April 1784 Vienna).

Matjaž Ličer (* 1978), R. Podgornik's and Rado Riha's PhD student, physicist-philosopher employed at the Marine Biology Station of the National Institute of Biology dealing with physical oceanography & numerical modeling of pollutant spreading in marine environments.

Ignaz Isak Leopold Lieben (* 28 February 1805 Prague; † 12 March 1862 Vienna).

Robert von Lieben (* 1878 Vienna; † 1913 Vienna), a wealthy Jewish Nernst's student, a grandson of Ignaz Isak Leopold Lieben.

Antoine Liebes (* 1752; † 1832).

Justus Liebig (* 1803; † 1873).

Raphael Eduard Liesegang (* 1869; † 1947).

Edwin Niblock Lightfoot Jr. (* 1925 Milwaukee, Wisconsin, United States; † 2017 Madison, Wisconsin, United States) was an American chemical engineer and Hilldale Professor Emeritus in the Department of Chemical and Biological Engineering at the University of Wisconsin-Madison.

Julius Edgar Lilienfeld (* 1882 Lvov; † 1963 Charlotte Amalie at US Virgin Islands).

Karl Paul Gottfried von Linde (* 1842; † 1934).

Bernhard August von Lindenau (* 1780 Altenburg; † 1854 Altenburg).

Otto Theodor Lindenthal (* 1872; † 1947 Vienna) physician in Vienna, director of Viennese Mariannengasse 20 Sanatorium of Anton Löw (Loew, * 1847; † 1907 Vienna).

Wang Ling (王鈴, 王铃, 1917/1918 Nantong (南通, Nántōng, Nan-t'ung, Nantung, Tongzhou, Tungchow); † 1994 Nantong).

Heinrich Friedrich Link (* 1767 Hildesheim in Lower Saxony; †1851 Berlin).

Karl Linnaeus (* 1707; † 1778).

Franciscus Linus (Hall, * 1595; † 1675).

Alojzija Kajetana Kahr married Lipič (Lippich, * 1805 Ilz).

Ferdinand Lippich (* 1838 Padua; † 1913).

Fran Viljem Lipič (Franz Wilhelm Lippich, Fr. Guilielmus Lippich, * June 13, 1799 Spišská Nová Ves (Igló) west of Košice in Slovakia; † December 12, 1845 Vienna).

Friedrik Lipič (Lippich, * 1832 Ljubljana).

Jožef Lipič (Lippich, * February 5, 1761 Ljubljana).

Tereza Lipič married Koestl (* 1800).

Wilhelmine Lipič married Czermak (Lippich, * 1831 Ljubljana; † 1885 Prague).

Emile Armet de Lisle (Émile, * 1853; † 1928), owner of manufacture *Sels de radium* at the eastern suburbs of Paris Nogent-sur-Marne.

Jules Antoine Lissajous (* 1822; † 1880).

Johann Benedict Listing (* 1808 Frankfurt; † 1882 Göttingen).

Liu Yan (Liu An, * 177/179 B.C. ; † 122 B.C.).

Milton Stanley Livingston (* 1905; † 1986).

voluntarist Scotist Thomà Llamazares (Thomas, * Valladolid (Vallisoletano) in Spain's northwest interior; OFMobs; † abt. 1690 Firenze?), published in 1670-1688).

Wenzel Franc Lobkowitz (Wencel Evzebius, * 20 January 1609 Prague; † 22 April 1677 Ravdnitz (Roudnitz, Rudnice) near Laba in the district of Letimeritz (Litomerice)).

Alipius Locherer (OFMobs Stein at western part of Krems in Lower Austria), published 1740-1732.

Joseph Norman Lockyer (* 1836; † 1920).

Robert Locqueneux (* 1937).

Oliver Joseph Lodge (* 1851; † 1940).

Alexander Nikolaevich Lodigin (Lodyguine, Александр Николаевич Лодыгин, * 1847 Стеньшино, Липецкий уезд, Тамбовская губерния Russia; † 1923 New York).

Siegmund Loewe (* 1885; † 1962).

Augustin Löffler (Jaromir, Ante, Czech Bohemian, published 1872-1879, * 1832 Jindřichův Hradec in the South Bohemia; † 1915 Prague?).

Johann Siegfried Löffler since 1822 the first forest director (Wald Director) of the Karlovac Forest Management.

Augustin's son Ladislav Löffler (* 1860 (Velika) Kikinda in Serbian Banat).

Philipp Lohmeier (* 1648 Magdeburg; † 1680 Lüneburg).

Eugen von Lommel (* 1837; † 1899).

Luise Friederike Caroline Hegel married von Lommel (* 1853; † 1924).

Mikhail Vasilyevich Lomonosov (* 1711; † 1765).

Josip Lončar (* 1891; † 1971).

Conrad Lee Longmire (* 1921; † 2010 Santa Barbara).

Alfred Lee Loomis (* 1887 New York; † 1975 East Hampton New York).

Hendrik Antoon Lorentz (* 1853; † 1928).

Hans Lorenz (* 1865 Wilsdruff west of Dresden in Saxony; † 1940 Sistrans by Innsbruck in Austrian Tirol) in 1917 rector of Technische Hochschule Danzig as full professor of technical mechanics (technische Mechanik).

Stanislaw Loria (* 1883 Warsaw; † 1958 London).

Karl of Lorraine (* 12 December 1712; † 1780).

Luis de Losada Prada (Lossada, * 1681 Quiroga, Lugo in Spain; SJ; † 1748 Salamanca).

Josef Loschmidt (* 15 March 1821; † 8 July 1895).

Josef Karl Loschmidt (* 18 February 1888; † 23 June 1898 Vienna).

Jurij Ahac Count of Losenstein (Georg Achaz, * 1597; † 1653).

Marie Katarina Countess Losenstein, married princess Auersperg (* 1635 Carinthia; † 1691 Ljubljana?).

Oleg Vladimirovič Losev (Оле́г Влади́мирович Ло́сев, Lossev, Lossew, * 1903 Tver; † 1942 Leningrad).

Paulin-Laurent-Charles-Évaléry Louyet (* 1818 Mons; † 1850 Brussels).

Gloria Becker married Lubkin (* 1933 Philadelphia; † 2020 Raleigh, North Carolina), a Jewish editor for the magazine Physics Today, cofounder of the Theoretical Physics Institute at the University of Minnesota.

Jean André De Luc (* 1727; † 1817).

Tomaso Luciani (* 1818 Albona; † 1894 Venezia).

Christian Friedrich Ludolf (Ludolff, * 1707; † 1763), member of Berliner Academy of Science from 1738.

Carl Friedrich Wilhelm Ludwig (Karl, * 1816 Witzenhausen 20 km south of Gottingen; † 1895 Leipzig).

Christian Friedrich Ludwig (* 1757 Leipzig; † 1823 Leipzig).

Karl Lueger (* 1844; † 1910).

John de Lugo (Juan de Lugo y de Quiroga, Xoan de Lugo, * 1583 Madrid; SJ; † 1660 Rome).

Francesco Luini (Luino, * 1740; SJ; † 1792).

Johannes Lulofs (Jan Lulofs, Johan, * 1711 Zutphen; † 1768 Leiden).

Otto Lummer (* 1860; † 1925).

Salvador Luria (* 1912; † 1991).

Joaquin Mazdak Luttinger (Quin, * 1923 New York; † 1997).

Emperor Charles IV of Luxemburg (Karl, * 1316; † 1378).

Sigismund I of Luxemburg (* 1368; Hungarian king 1387, Emperor 1410/1417, Bohemian king 1419-1421, 1436-1437; † 1437).

Vaclav of Luxemburg (Wenceslaus IV, * 1361; † 1419).

Vitaliĭ Nikolaevich Lyt͡sov (Виталий Николаевич Лысцов, Vitaly Lyscov) leading researcher at the National Research Centre "Kurchatov Institute" in Moscow (Национальный исследовательский центр (previously Российский научный центр) Курчатовский институт).

Lysenko (Трофи́м Дени́сович Лысе́нко, Трохим Денисович Лисенко, * 1898; † 1976).

M

Ernst Mach (* 1838; † 1916).

Johan Nepomuk Mach (* 1805; † 1879).

Marie Mach (* 1844; † 1929).

Robert Macquéreau de Valenciennes (Macquériau), early 16th century French Catholic townsman from Valenciennes in French Burgundy on Dutch border.

Theodore Eugene Madey (Ted, * 1937 Wilmington, Delaware; † 2008 Somerset in New Jersey).

Madhava (* 1340 Sangamagrama; † 1425).

Urban Madko (Matko, Madcho, * 1704 Tolmin; † 1741 Venezia).

Michael Maestlin (* 1550; † 1631 Tubingen).

Francis Janez Neri de Maffei (* 23 November 1738 Vipava; † 8 January 1826 Duomo in Gorizia).

Marquess Francesco Scipione de Maffei (* 1 July 1675 Verona; † 11 February 1755 Verona)

Joseph Jakob Liberatus Maffei von Glattfort (de Glattfort, * August 15, 1742 Gorizia, † 1807 Vienna).

Lorenzo count Magalotti (* 1637; † 1712).

Božidar Magajna (* 11 December 1912 Ljubljana; † 2012).

Andreas Maginot (* 1877; † 1932).

Constantine Magni (Costantino, * 1527; † 1606).

Francisco Stephano de Magni count Strážnice (Strassnitz in Moravia, † 1671).

František z Magni (František Magnis ze Strážnice, * 1598; † 1652).

Valeriano Magni (Maximilian Magnani, Valerij Magnus, * 11 October 1586 Milan, OFMCap 25 March 1602 Prague; † 29 July 1661 Salzburg).

Pierre-André d'Héguerty count Magnières (* 1700; † 1763).

Bishop Albertus Magnus (count Bollstädt, * 1193 Lauingen in Bavaria; † 15 November 1280 Köln).

Heinrich Gustav Magnus (* 1802; † 1870).

Bishop Olaus Magnus (Olof Månsson, * 1490 Östergötland; † 1557 Rome).

Gustav Mahler (* 1860 Kaliště in Czechia near Moravian border; † 1911 Vienna).

Sebastian De Maillard (* 1746; † 1822).

Jean Jacques D'Ortous de Mairan (Dortoux, * 1678; † 1771).

Matija Majar (* 1809 Wittenig (Vitenče) in Zilja (Ziljska Dolina, Gail valley); † 1892 Prague).

Simone Majolo (Simon Mayolus, Majoli, * abt. 1520 Asti in Piemonte; † after 1597 Vulturara or Montecorvino), Bishop of Vulturara and 50 km southern Montecorvino in southeast Italy east of Napoli from 1572 until his death.

Ettore Majorana (* 1906; † 1936).

Paul Mako von Kerek-Gede (Pál Makó, Paulus Makus Kerck, * 1723 Jászapáti in Central Hungary; † 1793 Buda).

Radojko Maksić (* 28 October 1933 Popova by Jastrepac in Serbia).

Ernest-François Mallard (* 1833; † 1894 Paris).

Edward Mallinckrodt (* 1878 Saint Louis; † 1967).

Arthur Mally (* 1843; † 1919).

Étienne Louis Malus (* 1775; † 1812).

Richard Maly (1839; † 1891).

Kenneth E. Manchester (Ken, * 1925 Winona, Minnesota; † 2014).

Valentin Mandelc (* 1837; † 1872).

Joseph Mangold (* 1716 Rehling in Swabia; SJ 1733; † 1787 Augsburg).

Maria Franciska von Mansfeld, married Countess Losenstein († 1654).

Angelo Maria Meraviglia Mantegazza († 1766).

Jacob Mantino ben Samuel (Mantinus, Mantini, * 1490 Tortosa, Spain; † 1549 Damascus, Syria) Jewish scholar turned Italian physician.

Carlo Giuseppe Matteo Marangoni (* 1840 Pavia; † 1925 Firenze).

Wilhelm Marášek (Vilim, Viljem Marašek, * 1847 Prague; † 1894 Travnik in Bosnia).

Jean-Paul Marat (* 1743 Boudry in western Switzerland; † 1793 Paris).

François-Séverin Desgraviers-Marceau (* 1769; † 21 September 1796 Altenkirchen).

Marquess Guglielmo Marconi (* 1874; † 1937).

Siegfried Samuel Marcus (* 1831 Malchin in northern Germany; † 1898 Vienna).

Abbé Jean François Marcy (Marco, baptized Jean Bosquet, * 1711 Verdun; † 1791 Löwen (Leuven, Louvain)).

Sibe Mardešić (* 1927 Bergedorf as the largest of the seven boroughs of Hamburg; † 2016 Zagreb).

Baltzar Emil Leo de Maré junior (DeMare, * 1904 Philadelphia Germantown, Pa.; † Germantown, Pa.?), whose father with the same name graduated from the School of Mines in Falun in Sweden in 1886 and sailed to the US in 1887 to become a Senior mechanical Engineer at Middwall Steel Works in Philadelphia.

Bernhard Marek (Mareck), engineer in Graz, published in 1861-1867. Relative of Alois Titus Marek (* 1819 Graz; † 1851 New Braunfels (Neu Braunfels, Neubraunsfeld) in central Texas), lawyer in Graz and Sevnica (Lichtenwald), revolutionary delegate to Frankfurt Parliament in 1848.

Andreas Sigismund Marggraf (Margraff, * 1709; † 1782).

Lev Margulis of Weizmann Institute of Science, praised by Israeli Margulis Memorial Prize in the field of Microscopy, applied to Materials Science.

Maria Prophetissima, Maria Prophetissa, Mary Prophetissa, Miriam the Prophetess, the Jewess, flourished in 1st/3rd century A.D. in Alexandria in Egypt.

Aleksandar Marinčić (Александар Маринчић, * 1933 Sinj in Croatia; † 2011 Beograd).

Vincent Marjašič (Vincentio Mariaschitz, OFM; † 13 January 1770 Kamnik).
Pietro di Maricourt (Petrus Peregrinus, * around 1220).

Velibor Marinković (* 1929; † 12 October 2000 Ljubljana).

Giovanni Giacomo Marinoni (* 1676; † * 1755 Vienna).

Edmé Mariotte (* 1620; † 1684).

Hieronim Markilič (* 1712; OFMobs; † 24 May 1790 Ljubljana).

Mihael Markič (M. Posavski, * 1864 Kranj; † 1839 Ljubljana).

Ivan Marković (* 1961 Koper).

Paja Marković-Adamov (Pavle, Паја Адамов Марковић, * 1855 Novi Karlovci in Srem; † 1907).

Željko Marković (* 1889 Slavonska Požega; † 1974 Opatija).

Duke of Dubrovnik Marshal Auguste-Frédéric-Louis Viesse de Marmont (* 1774; † 1852).

Ernest Marsden (* 1889; † 1970).

Roger Marston (* around 1235; † about 1303).

Benjamin Martin (* 1704 Worplesdon; † 1782 London).

Craig Martin (* 1972).

Émile Martin (* 1794 Soissons; † 1871 Fourchambault).

Louis Aimé-Martin (Aimé Martin, M.L., * 1782 Lyon; † 1847 Paris).

Pierre-Émile Martin (* 1824 Bourges; † 1915 Fourchambault).

Thomas Commerford Martin (* 1856 London; † 1924).

Martino Martini (* 1614 Trento; SJ; † 1661 Hangchou China).

Bernard Ignátz count Martinitz Bořita (Borsita, * 1603; † 1685 Prague) the highest burgrave of Prague, royal viceroy, bibliophile, founder of the Theatine monastery in Prague.

Jean-Claude Martzloff (* 1943; † 2018 Paris).

Martin van Marum (* 1750; † 1837).

Karl Marx (* 1818; † 1883).

Phoebe Sarah Marx married Ayrton (Marks, Hertha, * 1854 Portsea; † 1923 Bexhill-on-Sea).

Giovanni Battista Marzari (* 1755; † 1827).

Galeotto Marzio (* 1427; † 1497).

Rita Mascarenhas (* 1952 Puttur, Karnataka, India; † 2005 Delmar, Albany County, New York, USA) worked at Department of Physics, Utkal University, 751004, Bhubaneswar, India. Later joined the State University of New York at Albany (SUNY Albany, UAlbany). Collaborated on 3-D reconstructions of electron microscope images at Wadsworth Center in Albany, New York, the research-intensive public health laboratory of the New York State Department of Health. Married to her Albany collaborator physicist David Barnard.

Francesco Massardi (* 1880 Brescia; † 1957 Sulzano).

Blaž Matek (* 5 February 1855 Gornji Grad ob Dreti (Upper castle by Dreta River); † 29 January 1910 Maribor).

Georges Mathé (* 9 July 1922; † 15 October 2010).

Franz Eugen Mathon (Franjo, František, * 10 February 1828 Slavětín (Slawietin) in Olomouc District; † 1893 Vienna)
studied law and philosophy at Charles-Ferdinand University in Prague until his doctorate in

philosophy in 1854. In 1855 he passed the teacher's exams in mathematics and physics for grammar schools, and a year later he also obtained an apprenticeship for teaching the Czech language. He first replaced the botanist Giuseppe Accurti as a substitute teaching mathematics, physics, natural history and propaedeutic at the grammar school in Rijeka in October 1854, but the Rijeka director and Johann knight Kleeman did not promote Mathon to the rank of full professor because of his suspicious Pan-Slavic ideas. Mathon then taught in Brno, and at the real school in Olomouc. In 1856 he served as a supplied teacher at German State High School in Brno (Deutschen Staats-ober-Gymnasiums in Brünn (Altbrünn)) together with Pisko. Mathon taught physics (1857/58), Czech and French Languages as the director of the newly established Communal Lower (later Higher) Real school in 4th Bezirk of Brno (Staré Brno) from 28 September 1857 to 1885. He became a member of Naturalist Society in Brno (Naturforschender Verein in Brünn) after the board member Ignaz Weiner’s proposal on June 1, 1862. The retired director Mathon served as a member of the Imperial Council (the national parliament of the Předlitavsko region) for the Curia of rural municipalities in Moravia, Brno, Vyškov district, etc. from March 23, 1886 until 1891. At the Imperial Council, he joined the Czech Club, which since the late 1870s has united Old Czechs, Young Czechs, the Czech Conservative nobility, and Moravian national deputies (Trdina, 1903, 162-163).

Carlo Matteucci (* 1811 Forli; † 1868 Livorno).

Camille Arthème Matignon (* 1867 Saint-Maurice-aux-Riches-Hommes (Yonne); † 1934 Paris)

Adolf Matthias (* 1882; † 1961).

Donald Moss Mattox (Don, * 1933 Richmond, Kentucky) received B.S. in physics at Eastern Kentucky State University in 1953, and M.S. in solid state physics at University of Kentucky in 1961. He married Vivienne Harwood Mattox as his co-founder of Management Plus, Inc. MPI incorporated in Albuquerque NM in 1985. Don was elected president of the American Vacuum Society in 1985. He later became the technical director of the Society of Vacuum Coaters. He worked at Sandia National Laboratories until retirement in 1989.

Pierre Louis Moreau de Maupertuis (* 17 July 1698 St. Malo; † 27 July 1759 Basel).
Silvestro Mauro (Sylvester Maurus, * 1618/19 Spoleto in Umbria; SJ; † 1687 Roma).

Francesco Maurolico (* 1494; † 1575).

John Mawson (* 1816 Penrith; † 1867 Newcastle).

E. May (probably Edmund) of Loom & machine factory formerly May & Kühling in Chemnitz (Webstuhl- & Maschinenfabrik vormals May & Kühling). Possibly related to German business journalist and co-founder of the consumer, construction, and savings association "Production" Raphael Ernst May. E. May owned Manufacture and sale of textile machines, especially looms and preparation machines as well as machine tools, founded on August 24, 1872 under the takeover of the enterprise of Anton Zschille, which had existed since 1852 as the company Grossenhainer Loom and Machine Factory (formerly Anton Zschille) in Grossenhain in Saxony. Since 1890 the company name was Grossenhainer weaving mill and machine factory (formerly Anton Zschille) as branch of the loom and machine factory (formerly textile machine factory May & Kühling) in Chemnitz after they fused in 1889. In 1900 it was renamed to Grossenhainer loom and machine factory AG until it joined Unionmatex Association of German Textile Machinery Manufacturers GmbH, Berlin in 1943. May and Kühling store had been in existence in Chemnitz for many years before fusing to build lighter looms for clothing fabrics and the like as textile machine factory. Moritz Kühling from Chemnitz and Edmund May from Berlin were the readers of the magazine *Schacht und Hütte* edited by Karl May for Heinrich Gotthold Münchmeyer in 1875/76. They participated in solving puzzles while Edmund also sent contributions to the magazine for all sorts of things.

Karl May (* 1842; † 1912).

Raphael Ernst May (* February 21, 1858 London; † July 7, 1933 Hamburg).

Alfred Marshall Mayer (* 1836; † 1896).

Daniel Mayer (* 1930) professor of Theoretical and Experimental Electrical Engineering at the Faculty of Electrical Engineering of the University of West Bohemia in Pilsen.

James Walter Mayer (* 1930 Chicago; † 2013 Kailua-Kona, Hawaii).

Julius Robert Mayer (* 1814; † 1878).

Theodor WH Mayer (* 1825).

John Mayow (* 1640; † 1679).

Caroline Magdalena Barbara Mayr married Loschmidt (* 1846 Bozen; † 13 February 1930).

Gustav Ludwig Mayr (* 12 October 1830 Vienna; † 14 July 1908 Vienna).

Janez Krstnik Mayr (* 1686 Sillian in the district of Lienz in Tyrol; SJ; † 1748 Ljubljana).

Janez Krstnik Mayr (Johann Baptist Mayer, * 9 February 1693 Vienna; SJ 9 October 1708 Vienna; † 25 January 1760 Krems).

Janez Krstnik Mayr (* 20 February 1634 Frauen-Chiemsee in Bavaria; † 1708 Salzburg).

Karoline Mayr (* 23 February 1885; † 13 December 1950).

Hiram S. Maxim (* 1840; † 1914).

James Clerk Maxwell (* 1831; † 1879).

cardinal Giulio Mazarin (Mazarini, * 1602; † 1661).

Cardinal Michele Mazzarino (Mazzarini, Michel Mazarin, * 1605 Pescina; † 1648 Rome).

Count Giammaria Mazzucchelli (* 1707; † 1765).

Russell McCormmach (* 1933 USA).

James MacCullagh (* 24 October 1809 Landahaussy; † 24 October 1847 Dublin).

Sir William Christopher Macdonald (* 1831; † 1917 Montreal).

Ives W. McGaffey inventor based in Chicago, Illinois in 1860-1889, joined a local firm of J. H. Brown.

Étienne-Vincent Machuel (* 1719 Rouen; † 1781 Rouen), printer.

James Scott Maclaurin (* 1864 Unst the northernmost of the inhabited Shetland islands in Scotland; † 1939 Wellington).

Herbert G. McLeod (* 1841; † 1923).

Frederick A. McNally (Fred) worked for Research and Development, Jarrell-Ash Company, 165 Newbury Street, Boston, Massachusetts in 1950-1960, founded by J. O. Jarrell († 1943) in 1933 and joined by his assistant Ash. Fred became the Chairman of the Committee on Education od AVS.

Donella H. Meadows (Dana, * 1941 Elgin, Illinois; † 2001 Hanover, New Hampshire).

Dennis, L. Meadows (* 1942 Montana).

Cornelius Franciscus Nelisa uit Mechelen (* 1736; † 1798).

András Mechwart (* 6 December 1834 Schweinfurt; † 14 June 1907 Budapest).

Richard of Mediavilla (* around 1249; † about 1307).

Vladimir Medica (* 1950 Pula), professor at Faculty of Engineering of University of Rijeka in Croatia (RITEH).

Cosimo II de'Medici (* 1590; † 1621).

Cardinal Giovanni Carlo de'Medici (* 1611; † 1663).

Prince Leopoldo de'Medici (* 1617; † 1675).

Friedrich Casimir Medicus (* 1736; † 1809).

Mojsije Medić (Mojo, * 1855 Ličko Dobroselo east of Gospić; † 1939 Zemun).

Hieronymus Megiser (Hijeronim, * 1554/1555 Stuttgart; † November 1619 Linz).

Heinrich Meidinger (*1831 Frankfurt am Main; † 1905 Karlsruhe) constricted his Voltaic cell with constant voltage as bettered John Frederick Daniell's cell in 1859.

Alexander Meissner (Meißner, * 1883 Vienna; † 1958 Berlin).

Paul Traugott Meißner (* 1778 Mediasch in Romania; † 1864 Vienna).

Lise Meitner (Elise, Lisa, * 1878 Vienna; † 1968 Cambridge).

Barthol Mastrio de Meldula (* 1602 Meldola (Meldula) by Forlì in Emilia-Romagna; † 1673 Meldola).

Aleksander Mell (* 1850 Prague; † 1931 Vienna).

Louis Henry Friderik Melsens (* 1814 Leuven; † 1886).

Luigi Federico Menabrea (* 4 September 1809; † 24 May 1896).

Menachem Genut, Tel Aviv University (TAU) Department of Chemistry.

Dmitry Ivanovich Mendeleev (Mendeleev, * 1834; † 1907).

Kurt Alfred Georg Mendelssohn (* 1906, Berlin; † 1980, Oxford, United Kingdom), a great-great-grandnephew of philosopher Moses Mendelssohn.

Thomas Corwin Mendenhall (* 1841; † 1924).

Francisco de Mendoca (Mendoça, Medoza, Mendonça, * 1573 Lisbon (Olisiponensis); SJ; † 1626).

Guglielmo Menis (Vilim, William, Willelmo, * 1790 Artegna north of Udine, † 1850 Trieste).

Ivan Nepomuk Menner (Joann G. Maenner, Johann Gregor? Manner, Männer, * abt. 1767 Western Austria; † aft. 1846 Zagreb?).

Louis-Sébastien Mercier (* 1740; † 1814).

Hubert de Méricourt (Li Tsuen-Hien Si-Tschen, * 1 November 1729 France; SJ 8 January 1754 France; † 20 August 1774 Beijing).

Harrison J. Merrill (* 1913 Preston, Idaho; † 2008 Reston, VA).

Joannes Merinero (Juan López, * 1583 Madrid; OFMobs 1600 Madrid; † 1663 as a bishop in Valladolid in northwest Spain).

Marin Mersenne (* 1588; † 1648).

Ivan Krstnik Mesar (Messari, Johann Baptist, * 1673 Mesari near Branik; † 1723 Hanoi, Vietnam).

Baron Georg Ignaz von Metzburg (Mezburg, * 24 June 1735 Graz, SJ 17 October 1751 Vienna; † 3 March 1798 Vienna)

Joseph Sebastien Meyer (* 1763; † 1834).

Kirstine Bjerrum married Meyer (* 12 October 1861 Skærbæk; † 28 September 1941 Hellerup).

Oskar Emil Meyer (* 1834; † 1909).

Robert Bruce Meyer (* 1943 Saint Louis).

Stefan Meyer (* 1872 Vienna; † 1949 Bad Ischl) the head of The Institute for Radium Research (Institut für Radiumforschung) of the (Imperial) Academy of Sciences founded in Vienna in 1910 as the first institute in the world to research radioactivity until his retirement in 1947 except for his expulsion because of his Jewish origin in 1938-1945.

Wilhelm Heinrich Theodor Meyer (Ludwig Christian Karl Mayer, * February 8, 1820/1825 Michelbach part of Marburg in Hesse (Nassau)). Might be related to his much northern namesake Wilhelm Carl Heinrich Theodor Meyer (* 1829

Eldena in Mecklenburg, Germany; † 1908 Grabow in Mecklenburg, Germany).
John Michell (* 1724; † 1793).

Albert Abraham Michelson (* 1852 Strzelno; † 1931 Pasadena).

Fritz Michelssen, collaborator of Schröter for Telefunken in 1930s until je joined Neufeldt & Kuhnke Gesellschaft at Berlin-Steglitz in 1938, retired to Berlin-Fridenau Cranachstraße 20 in 1950/1951.

William Edgar Knowles Middleton (* 1902 Canada; † 1988 Canada).

Benjamin Franklin J. Miessner (* 1890 Huntingburg, Indiana; † 1976 Miami, Florida).

Miodrag V. Mihailović (* 1922 Čačak; † 2014 Ljubljana).

Dénes von Mihály (* 1894; † 1953).

Jurij Miklavčič (Miklautschitsch, * 1756 Zali log in Upper Carniola; † 1829 Ljubljana).

Marko Mikšić (* 1847) member of the unity of Czech mathematicians, professor of geometry and geometric designs as a custodian of geometrical cabinet, leader of meteorological observations in Rakovac in 1882/83.

Mina born Miller married Edison (* 1865 Akron in Ohio; † 1947).

William Hallowes Miller (* 1801 Wales; † 1880 Cambridge).

Robert Andrews Millikan (* 1868; † 1953).

Benedetto Milocco (fl. 1747-1785 in Venezia).

John Milton (* 1608; † 1674).

Franz Minck (Mink, * 23 August 1868 Hamburg) obtained his PhD in Munich in 1891 where he researched in following years.

Honoré Gabriel Riqueti count de Mirabeau (* 1749; † 1791).

Victor de Riquetti marquis de Mirabeau (* 1715; † 1789).

Slobodan Mircevski (Mirčevski, Слободан Мирчевски, * 1950 Skopje (Скопје) Macedonia), Faculty of Electrical Engineering and Information Techologies, Ss. Cyril and Methodius University, Skopje, Macedonia (Електротехничкиот факултет, Универзитет Св. Кирил и Методиј-Скопје).

Jovan Mitrović (* 1943 Strijezevica, Maglaj, northern Bosnia and Herzegovina), retired professor at the Universities Paderborn and Stuttgart, now professor at Serbian Republic Trebinje University of East Sarajevo.

Clara Louise Mitscherlich (* 1827).

Eilhard Mitscherlich (* 1794; † 1863).

Heinrich Mitteis (* 1 April 1822 Prague; † 15 May 1878 Vienna).

Milorad Mladjenović (Mlađenović, Mladženović, * 1920 Sarajevo; † 2005) head of spectroscopy department in Vinča by Beograd.

Emilija Mlakar, married Branz, the mathematician.

Gojmir Mlakar, surveyor and mountain climber raised in Kočevje.

Jasna Mlakar, department od history at Ljubljana Philosophical Faculty.

Jože Mlinarič (* 1935 Maribor).

Thomas Mlodzianowski (Tomasz Młodzianowski, * 1622 Ciechanów (Zichenau) in north-central Poland; SJ 1637; † 1686 Wolbrom (Wolfram) by Krakow in Southern Poland).

Catholic Archbishop of Nicosia Philip Mocenici (* 1536; † 1571).

Franc knight Močnik (* 1814 Cerkno; † 1892 Graz).

Gregor Moder (* 1979 Ljubljana).

Peter Anton von Modesti (* 29 July 1750 Ljubljana) the son of dr. Valentin von Modesti († 1800).

Stjepan Mohorovičić (* 1890; † 1980).

Carl Friedrich Christian Mohs (* 1773; † 1839).

François-Napoléon-Marie Moigno (François Napoleon Marie, * April 15, 1804 Guéméné (Morbihan) in Brittany; SJ 2 September 1822-October 1843; † 14 July 1884 Saint-Denis (Seine)).

Henri Moissan (* 1852; † 1907).

Johann August Georg Edmund Mojsisovics von Mojsvar (Moïssissovics, Ödön, Mojsisović, * 1839 Vienna; † 1907 Mallnitz by Spittal in Carinthia).

Frederick de Moleyns (William Mullins, * 1804 Killiney in county Kerry in Ireland; † 1854 Newgate prison in London).

Joseph Privat de Molières (* 1734; † 1739).

Pedro Juanete de Molina (* 1698 Onil in the Spanish province of Alicante south of Valencia; † 1775 Vila-Real in Northern Portugal).

Anton Moljk (* 1916; † 1998).

Joseph Mollet (1756; † 1829).

Anton Mollinary (Molinari baron Monte Pastello, * 1820 Titel in Bačka; † 1904 Soave by Como in Lombardy).

Nicolò Monardes (Nicolau Monardis, * 1493 Seville; † 1588 Seville).

Edward Henry Cradock Monckton (* 1812; † 1878 Fineshade Abbey, Northants (Northamptonshire) buried 6 miles west in family vault at Seaton, Rutland) collected Indic data about science, alchemy, chemistry, and agriculture as an official for the East India Company in Bengal before retiring to Fineshade Abbey, Northants (Northamptonshire).

Carlo Mondini (* 1729 Bologna; † 1803).

Edmond Marey Monge (Louis Eduard Marey-Monge, * 1807 Nuits-Saint-Georges in Eastern France; † 1868 Paris).

Gaspard Monge (* 1746; † 1818).

Jean-André Mongez (* 1750 Lyon; † 1788 Vanikoro of Solomon pacific Islands during the expedition of Jean François de Galaup count Lapérouse (La Pérouse)), priest and mineralogist.

Ovidio Montalbani (* 1601 Bologna; † 1671 Bologna).

Geminiano Montanari (* 1633 Modena; † 1687 Padua).

Ferdinand de Montagnana (Montegnana, * 1599 Ljubljana or Celje; † 28 May 1674 Vienna).

Polidor de Montagnana (Montegnana, * Italy; † 1604 Novo mesto).

Severus Montagnana (* about 1579; † before 1602).

Guidobaldo marquis del Monte (Guido Ubaldo Montis, Guidobaldi, Guido Baldi, * 1545 Pesaro; † 1607 Montebaroccio).

Giovanni Battista Monteggia (Giambattista, * 1762 Laverne; † 1815 Milano).

Joseph Michel de Montgolfier (* 26 August 1740 Videlon-les-Annonay; † 26 June 1810 Belaruc-les-Bains).

Jacques Étienne de Montgolfier (* 7 January 1745 Videlon-les-Annonay; † 2 August 1799 Serrières).

Scott L. Montgomery (* 1951 Ithaca New York).

Pierre Petit de Montluçon (* 1598; † 1671).

Henry Louis Habert de Montmor (* about 1600 Paris; † 1679 Paris).

Livius Rabesanus da Montursio of Vicenza (Livio Rabesano, * 1605 Vicenza; † 1664).

Daniel McFarlan Moore (* 1869 Pennsylvania; † 1936 New Jersey).

Gordon Earle Moore (* 1929 San Francisco).

John Nepomuk Morack (Morak, Morach, * 2 September 1730/31 Ljubljana; SJ 28 October 1748; † 9 January 1807 Radomlje).

Maximilian Morautscher (* 1721; † 1806).

Henry More (Heinrich Morus, * 1614; † 1687).

Giambattista Morgagni (* 1682; † 1771).

John Pierpont Morgan (* 1837; † 1913).

John Pierpont Morgan (Jack, * 1867; † 1943).

François Auguste Morren (* 1804 Bordeaux; † 1870 Marseille).

Mario Morselli (* 1922 Milano), son of Giovanni Morselli (* 1875 Concordia sulla Secchia, Province of Modena, Emilia-Romagna; † 1958 Milano).

Henry Morton (* 1836 New York; † 1902 New York).

Sebastiano Fox Morcillo (Fox-Morzillo, Foxius Morzillus, * 1526/1528 Sevilla; † 1559/1560 at sea).

Mihail Jakovlevič Moroškin (Михаил Яковлевич Морошкин, * 1820 село Андреевское Бежецкого уезда Тверской губернии (village Andreebskoe in Bezhetsky Uyezd of the Tver Governorate); † 1870 Petersburg (Санкт-Петербург)).

Anton Albert baron Moscon (* March 18, 1782 Graz; † January 16, 1822), a well-known pomologist, planted a large nursery in Graz with a school, and later in Pišece by Brežice where he founded a school in the castle and paid a teacher.

Josip Moser (* 1942 Dubrovnik).

Rudolf Ludwig Mössbauer (* 1929 Munich; † 2011 Grünwald).

Ottaviano Fabrizio Mossotti (* 1791; † 1863).

Motoki Ryōei (Yoshinaga, 本木 良永, * 1735; † 1794).

Motoki Ryōi (本木庄太夫良意, * 1624; † 1697).

Neville Francis Mott (* 1905 Leeds; † 1996).

Albert Johann Mosetig knight Moorhof (Mosetich, Mozetič, * 1838 Trieste; † 1907 in Danube by Vienna).

Nevill Francis Mott (* 1905 Leeds; † 8 August 1996).

Louis-Toussaint de la Moussaye (* 1778 Rennes; † 1854, Paris).

James Wallace Moyer (* 16 August 1919 Syracuse, New York) obtained his PhD in physics at Rutgers University in 1948 for his work as research associate to Knolls Atomic power lab of GE in Schenectady, eastern New York in 1946-1955. After 1963 he was a director of applied research Autonetics division of North American Aviation research center at Anaheim, California while residing in Santa Barbara.

Miran Mozetič (* 1961).

Dušan Mrkić (Dan Mrkich, Душан Мркић, * 1939 Budačka Rijeka 20 km south of Karlovac in Croatia; † 2005 Canada).

Ferdinand von Mueler (* 1825; † 1896).

Franc Mühlpaher (Mühllbacher, Mühlbacher, Millbacher, * 16 October 1744 Ljubljana; SJ 18 October 1760 Vienna; † 1826 Stanisławow (Ivano-Frankivsk) in today's Ukraine).

Vladimir Muljević (* 1913 Zagreb; † 2007 Zagreb).

Matt Mullenweg (* 1984).

Carl Heinrich Florenz Müller (* 1845; † 1912 Hamburg).

Emil Müller (* 22 April 1861 Landskron (Lanškroun); † 1 September 1927 Vienna).
Filip Müller (Philip, * 1613 Graz).

Franz Müller (Beckenbauer, * 1838; † 1906).

Franz Müller (* 1859; † 1921).

Johann Christoph Müller (* 1673; † 1721).

Johann Heinrich Müller (* 1671; † 1731).

Johann Heinrich Jakob Müller (* 1809, Kassel, Westphalia; † Freiburg im Breisgau).

Louis Müller-Unkel (* 1853 Schmalenbuche (now part of Neuhaus am Rennweg); † 1938 Rudolstadt in Thüringen).

Peter Müller (* Koblenz; † 1858 Berlin).

Alfonz Müllner (* 1840 Velikovec; † 1918 Vienna).

Georg Wilhelm Muncke (Munck, Munke, * 1772 Hilligsfeld; † 1847 Großkmehlen).

William Murdock (Murdoch, * 1754 Bellow Mill; † 1839 Soho).

Jakob Murko (* 7 July 1851 Ptuj; † 16 February 1916 Graz Schlossberg (Castle Hill) no. 36).

Vladimir Murko (* 1906 Graz; † 1986 Ljubljana).

Maria Meichenič widow Malleg married Murko (Majhenič, * 9 November 1838 Maribor Jahringtal parish Bezirk; † 27 March 1916 Graz parish Heilige Blut).

John Murray (* 1778 Edinburgh; † 22 July 1820 Edinburgh).

Pieter van Musschenbroek (* 1692; † 1761).

Johannes Joosten van Musschenbroek (* 1660; † 1707).

Samuel van Musschenbroek (* 1639; † 1681).

François Georges Mustel (* 1719 Rouen; † 1803 Rouen).

Nicolas-Alexandre Mustel (* 1724/1736; † 1804/1806).

Anton Muszka (* 1719; † 1790).

Igor Muševič (* 1954 Ilirska Bistrica) drummer of the ethnorock band Begnagrad turned Blinc's successor head of F5 department at IJS by research of self-assembly in nematic liquid crystaline colloids.

Drago Mušič (* 1899 Novo mesto; † 1993 Maribor).

N

Andrea Naccari (* 1841 Padua; † 1924 Torino).

Josef Wilhelm Nagler (* 1901 Vienna; † 1990 Vienna), published 1950-1968 as editor of the Viennese *Blätter für Technikgeschichte* and the director of Technischen Museums Wien in 1950-1966.

Tanaka Masayuki Nakagaki (* 1929 Fukuoka Perfecture; † 2008 Kyoto).

Tsuko Nakamura (Nakamura Tsuko, 中村 士, * 1943 Seoul in then Japanese Korea).

Shigeru Nakayama (中山茂, * 1928; † 2014 Tokyo).

Hantare Nagaoka (* 1865; † 1950).

Aleksander Nagy (* 1834 Ptuj; † 1909 Maribor).

Robert Nahrwold (* 1850) PhD at Friedrich-Wilhelms-Universität Berlin in July 1876, then teacher and director of the Berlin Grammar School (Gymnasium) and collaborator at Helmholtz's Berliner Institute of Physics.

Slobodan Nakićenović (* 1916; † 1996 Vienna).

Ananth Naman, studied for Ph.D. at department of Materials Science & Engineering University of Florida in 1904-1997 in collaboration with

Department of Energy Office of Energy Research Oak Ridge National Laboratory Tennessee- Now CTO, VP Asia Pacific at Cabot Microelectronics in Xuhui District, Shanghai, China.

Julius Nardin (* 1877; † 1959)-

Friedrich Narr (* 1844 Würzburg; † 1893).

Johann August Natterer (* 1821; † 1901).

Claude-Louis-Marie-Henri Navier (1785 Dijon-1836 Paris)

Nazzaro Nazzari (Nazario Nazari, * 1723/4, Venice; † after 1793).

Jacques Necker (* 1732; † 1804).

Joseph Needham (* 1900 London, England; † 1995 Cambridge).

Christian Ernst Neeff (* 1782; † 1849).

Franc Neger (* 1859; † 1944).

Josip Nejedli (Nejedly, Johann Negedlý, * 1821 Prague; † 1919 Ljubljana).

Johan Christian Nelkenbrecher († 1760).

Vinko Nemanič (Vincenc), head of Vacuum lab at F4 department of IJS.

Miha Nemevšek, staff member/senior scientist at the high energy Particle physics group of the Theoretical Physics Department at the Jožef Stefan Institute.

Herman Walther Nernst (* 1864; † 1941).

Henri Nestlé (Heinrich Nestle, * 1814 Frankfurt am Main; † 1890 Glion by Montreux in Switzerland).

Eugen Netoliczka (* 1829; † 1889).

Joseph Chrysostom Neugebauer (* 1706 Franckenstein (Ząbkowice Śląskie south of Wroclaw) in Silesia; SJ 1729 Vienna; † 1759 Beijing).

Carl Gottfried Neumann (* 1832; † 1925).

Franz Ernst Neumann (* 1798; † 1895).

Johann Philip Neumann (* 27 December 1774 Třebíč (Trebitsch, Trebiž), north of Vienna, west of Brno in Moravia, † 1849 Vienna).

Louise-Marie de Gonzague princess Nevers (Gonzaga, * 1611; queen 1646; † 1667).

Simon Newcomb (* 1835 Wallace, New Scotland; † 1909).

Thomas Newcomen (* 1663; † 1729).

John Alexander Reina Newlands (* 1838; † 1898).

John Frederick Newman (* 1783 South Londoner Peckham, Surrey; † 1860 borough in Northwest London of Camden, Middlesex).

Isaac Newton (* 1642; † 1727).

John Newton (* 1759; † 1844).

William Newton John's son and successor.

Janez Nexinger (Johann, * 1641 Schwanenstadt in Upper Austria; † 1729).

Edward Leamington Nichols (* 1854; † 1937 West Palm Beach).

Ernest Fox Nichols (* 1869 Leavenworth in Kansas; † 1924).

John William Nicholson (* 1 November 1881, Darlington; † 3 October 1955).

William Nicholson (* 1753; † 1815).

William Nicol (* 1770; † 1851 Edinburgh).

Alexander McLean Nicolson (Nicholson, * 1880 Uruguay; † 2 February 1950 New York).

Jens Rud Nielsen (* 1894 Copenhagen; † 1979 Norman Oklahoma) Bohr's student who immigrated to the United States in 1922 to become a physicist at the University of Oklahoma in 1924-1971.

Keld Nielsen, Head of Institute for the History of Science at Aarhus University, Denmark, later at Denmark Museum in 2007.

Christian Nieper (* 1819 Braunschweig).

Jacob Joannes Wencheslav Dobrzensky de Nigro Ponte (Schwartzbrug, Cherného Mostu, 1623; † 1697).

baron Feodor Nikolić (* 1836; † 1903).

Paul Nipkow (* 1860; † 1940).

Jun-ichi Nishizawa (西澤 潤一, Jun'ichi, * 1926 Sendai; † 2018 Sendai).

Vladimir N. Njegovan (* 1884 Zagreb; † 1971 Zagreb).

Alfred Nobel (* 1833; † 1896).

Leopold Nobili (* 1784; † 1835).

Charles Nodier (* 1780; † 1844 Paris).

Etienne Noël (* 1581; † 1659).

Lodovico count Nogarola (* 1490/1491 Verona; † 1558/1559 Verona).

Floris Nollet (Florise, * 1794 Élouges in Belgium; † 1853 Elsene in Belgium) professor in Brussels.

Jean-Antoine Abbé Nollet (* 1700; † 1770).

St. Norbert (Gennep, * abt. 1075 Xanten-Magdeburg; † 1134).

John Norris (* 1954).

Edwin Fitch Northrup (* 1866 Syracuse; † 1940).

Wayne Buckles Nottingham (* 1899 Tipton, Indiana; † 1964, Bloemendaal, Netherlands)

Jožef Andrej Nowak (Novak, Novakh, Baptized as Josef, * 1750 Gorizia; † 15 April 1888 Stična).

Campanus of Novara (* 1220; † 1296).
Robert N. Noyce (* 1927; † 1990).

Pierre Des Noyers (* 1608; † 1693).

Črtomir Nučič (* 1909; † 1969 Ljubljana?).

Pedro Nuñez (Nonius, * 1492 Alcazar del Sol; † 1577 Coimbra).

David E. Nye (* 1946 Boston), professor emeritus at University of Southern Denmark (at Odense, Copenhagen, etc.)

O

Guglielmo Oberdan (Wilhelm Oberdank, * 1858 Trieste; † 1882 Trieste).

Albert von Obermayer, colonel (* 1844; † 1915).

Pavel Obersteiner (Steiner, * about 1480 Radovljica; † after 1544).

Robert Obrul from Oplotnica, professor of history and German language, founding member of the local vocal ensemble Sonus.

William Ockham (* 1280/1285 Ockham; † 1347/1349 München).

Anton Ocvirk (* 1907 Žaga by Bovec; † 1980).

Benedetto Odescalchi (* 1611 Como).

Gottlieb S. Oehrlein, from 2000 taught at A. James Clark School of Engineering of the University of Maryland involved in researches of Low-Temperature Plasma Surface Interactions, Nanoscale Graphitic, Film Formation, Atomic Layers, and Etching by atmospheric-pressure plasma jet.

Hans Christian Oersted (* 1777; † 1851).

Ogata Kōan (緒方 洪庵, Ogata Koreaki, * 1810; † 1863 Edo).

Alfred Ogris, retired director of Land Archive of Carinthia (Kärntner Landesarchives).

Russell Shoemaker Ohl (* 1898 Pennsylvania; † 1987 California).

Lorenz Oken (* 1 August 1779; † 11 August 1851).

Tanomi Okutsugu (田 沼 意 次, * 1719; † 1788).

Mark Oliphant (* 1901 Adelaide; † 2000 Canberra).

Jean-Philippe-Augustin Ollivier (* 1739; † 1788).

Axel Ragnar Olsen (* 1889 Halsingborg Sweden; † 1954 Berkeley), Chemical laboratory of the university of California.

Karol Olszewski (* 1846; † 1915).

Jabbo Oltmanns (Ottmans, * 1783 Wittmund (Ostfriesland); † 1833 Berlin).

Lucas Opfermann (* 1690 Fulda; SJ; † 1750 Fulda).

Julius Robert Oppenheimer (* 1904 New York; † 1967 Princeton).

Alojzij Oražem (* 1932 Sodražica; † 2017).

Nicolo d'Orbellis (Dorbel, Dorbellus, d'Orbelles, * abt. 1400 around Angers in Western France; OFMconv; † Abt. 1475 Rome).

Maria Theresa Wintershofen married Oršić (* about 1665; † 1700).

Abraham Ortelius (* 1527; † 1598).

Frederik III of Ortenburg († 1418).

Otto V Ortenburg (* 1292; † 1343).

Otto VI Ortenburg (* 1338; † January 29, 1374).

Mario Osana (Marij, * 1880; † 1958).

Milan Osredkar (* 19 October 1919 Ljubljana; † 2003).

Radko Osredkar (* 1945).

Uči Fajgelj married Osredkar (* 31 August 1927 Kred by Kobarid).

Niko Ottowitz, professor of physic and mathematic at Slovenian Grammar School in Klagenfurt.

Franciscus de Oviedo (* 1602 Madrid; SJ; † 1651).

Friedrich Wilhelm Ostwald (* 1853 Riga; † 1832 Leipzig).

Jacques Ozanam (* 1640; † 1718 Paris).

P

Karl Adolf Paalzow (* 5 August 1823 Rathenow; † 1908 Berlin).

Janez Krstnik baron Paccassi (Johann Baptist, * 1758, Gorizia; † 1818 Vienna).

Nikolai Frančišek Leonard Paccassi (Nikolaus Franz Leonhard, * 1716 Viennese Neustadt; † 1790 Vienna).

Stefano Pace (* 1695 Malta; SJ Parma?; OFM third order Malta?; † 1735 Malta).

Charles Grafton Page (* 1812; † 1868 Washington D.C.).

Franc Mihael Paglovec (* 1679 Kamnik; † 1759 Spodnji (Lower) Tuhinj).

Emanuel Anatoljevich baron von der Pahlen (Барон Эмануэль Анатольевич фон дер Пален, * 1882 Peterhof by St. Petersburg, Russia; † 1952 Basel).

Peter Aleksevich count von der Pahlen (Peter Ludwig Graf von der Pahlen, Пётр Алексéевич фон дер Пален (Пáлен), Pëtr Alekséevič Pálen (Palen), Pyotr Alexeyevich, * 1745, Palms Manor (now Palmse); † 1826, Mitau (now Jelgava)) a Baltic German courtier and general playing a pivotal role in the assassination of the Emperor Paul as the Military Governor of Sankt Petersburg.

Jože Pahor (Joko, * 1933; † 2017).

Michael Paintner (* 1753; † 1826).

Adriano De Paiva (* 1847; † 1907).

Janko Pajk (* 1847; † 1899).

Carl Pallasmann (* 1840 Schlotten in Bohemia).

Cardinal Francesco Maria Sforza Pallavicino (Pietro Pallavicini, 1607 Rome; † Rome).

Luigi Palmieri (* 1807; † 1896 Naples).

St. Pancratius (* 289; † 12 May 303/304 Rome).

Frederic Paneth (Fritz, * 1887 Vienna; † 1958 Mainz).

Giovanni Jacobo Panici (* 1657; † 1716).

Matjaž Panjan (* 1980).

Peter Panjan (* 1957).

Milan Panajotović († before 1936).

Giuliano Pancaldi (* 1946 Italy), professor at Bologna University.

knight Lambert Pantz (* 18 August 1835 Tržič; † 3 February 1895 Fieberbrunn in northeast Tyrol).

Joseph Panzi (Giuseppe Pansi, P'an T'ing-Tchang, Jo-Ché, * 1734 Cremona or Florence; SJ Genova (Genes); † before 1812 Beijing).

Denis Papin (* 1647; † 1713).

Mihael Papler (* 1621 Škofja Loka in Carniola; SJ 1639 Vienna; † 1670 Loreto in Italy), 9th rector of Rijeka (Fiume) Jesuitical school in 1667-1670.

Jean-Noël Paquot (* 1722 Florennes; † 1803).

Aureolus Teofrastus Bombastus von Hohenheim Paracelsus (Paracelz, * 1 May 1493; † 24 September 1541 Salzburg).

Dominique Parrenin (Parennin, Pa To-ming K'e-an, * 1 September 1665 Grand-Russey; SJ 1 September 1685; † 20 September 1741 Beijing).

Georg Friedrich Parrot (* 1767; † 8 July 1852).

Charles Algernon Parsons (* 1854 London; † 1931 Jamaica).

Paul Maria Partsch (1791-1856).

Blaise Pascal (* 1623; † 1666).

Etienne Pascal (* 1588; † 1651).

Gilberte Pascal (* 1620; † 1668).

Louis Pasteur (* 1822; † 1895).

sir Clifford Copland Paterson (* 1879; † 1948).

Samuel Paterson (* 1728; † 1802).

Karl Pauer (* 1847 Ljubljana).

Ana married Pauer (* 1850 Šentjernej).

Wolfgang Pauli (* 1900; † 1958).

Aimé Henri Paulian (* 1722; SJ; † 1801).

Alojz Paulin (Pavlin, * 1930 Podbrezje in Franckova house).

Jean Paulus (* 1710 Vergaville; SJ; † 1781).

Snježana Paušek married Baždar (* 1950 Brčko in Bosnia and Herzegovina).

Gerald L. Pearson (* 1905 Salem, Oregon; † 1987 Portola Valley, California) was raised as a Quaker.

Rendel Sebastian Pease (Bas, * 1922 Brunswick Walk, Cambridge; † 2004 West Ilsley, Berkshire), the son of geneticist Michael Stewart Pease († 1966) and his wife the great-great-great-granddaughter of the potter Josiah Wedgwood. Rendel directed the Culham Laboratory for Plasma Physics and Nuclear

Fusion and 1968–1981 and headed the British chapter of Pugwash against nuclear bombings.

Leopold von Pebal (* 1826; † 1887).

Ferdinand Peche (* 1820 Pisek in southern Bohemia; † 1898 Innsbruck).

Giuseppe Pecis (* 1716 Milan; † 1799 Cinisello).

Charles Fletcher Peck (* 1834 Quebec, Canada; † 1890 Asheville, Buncombe County, North Carolina), Tesla's New York City attorney.

Adolf Pečovnik (* May 25, 1883 Sv. Lenart).

Carl Peer (Karl, Karel, * 1697; † 1776).

Adam Peiperl (* 1935 Sosnowiec, Sosnowiec, Silesian Voivodeship, Poland; † 2019 Silver Spring, Maryland), Jewish translator and videographer of Kinetic Polarized Light Sculptures.

Nicolas Claude Fabry de Peiresc (* 1580; † 1637).

Geminiano Pellegrini (* 1845 Koper).

Theodor baron Pelichy and Turksweert (* 1741; † 1811).

Frans Michel Penning (* 1894; † 1953 Utrecht).

Benedictus Pererius (Valentin, * 1535 Ruzafa near Valencia; SJ; † 1610 Rome).

Bernhard Perger (* about 1640 Ščavnica in Slovenske gorice (Stanz); † about 1502 Vienna).

André Pereira (徐懋德, * 1689; † 1743).

Francisco Pereira (* 1607 Lisbon; SJ 1622; † China).

Florin Périer (* 1605; † 1672).

Andrej Perlah (Perlach, Perlachius, * 1490 Svečina by Maribor (pri Mariboru); † 11/19 June 1551 Vienna).

Jean Pernet (Johannes, * 1845 Bern; † 1902 Zürich).

Markus Pernhart (* 1824; † 1981).

Hans Pernter (* 3 October 1887 Vienna; † 25 July 1951 Bad Ischl).

Jean Baptiste Perrin (* 1870 Lille; † 1942 New York).

John Perry (* 1850 Garvagh in Londonderry; † 1920 London).

Constantin Perskyi (Perski, Константин Дмитриевич Перский, * 1854 Tver guvernorate; † 1906).

Milan Pertot (* 1884 Trst; † 1967 Ljubljana).

Eligio Perucca (* 1890 Potenza; † 1965 Rome).

Dionigi Petavio (* 1583; SJ; † 1652)

Adelmo Antonio count Petazzi of Novigrad (Petazi di Castel Nuovo (& San Servolo island in the Venetian Lagoon), Petaci, Petačić, * abt. 1670; † 1733).

bishop Leopold Hanibal Josef Petazzi (* 1703; † 1772).

John Baptist Petek (Pettenegkh) of Ljubljana.

Giulio Peterin (Julije, Julius, * 1846).

Boris Matija Peterlin (* 4 July 1947), the son of Anton Peterlin (* 1908).

Anton Peterlin (* 1866 Ljubljana-Šiška; † 1912).

Anton Peterlin (* 25 September 1908 Ljubljana; † 24 March 1993).

Ernest Peterlin (* 1903 Ljubljana; † 20 March 1946).

Radivoj Peterlin - Petruška (Franc, * 1879 Kamnik; † 1938 Kamnik).

Tatjana Peterlin married Neumaier (Tanja, * 18 March 1945).

Anton Peterlin (* 1908; † 1993).

where Mihael Peternel (* 1808, the Laniše farm in the then parish of Nova Oselica (Neuoslitz); † 1884).

Alexis Thérése Petit (* 1791; † 1820).
Pierre Petit (* 1594; † 1677).

Tomislav Petković (* 1951 Šibenik), physicist and philosopher at Zagreb University.

Francesco Petrarca (Petrarch, * 1304; † 1374).

Joseph Leopold Baron Petrasch (Petráš, * 1714 Slavonski Brod; † 1772 Neuschloß in Moravia).

Angelus Petricca (Petricca de Sonneno, * 1601 Sonnino in Central Italy of then Campagna e Marittima; OFMconv; † 1673 Rome (less likely 1650).

William Petrie (* 1824 Kings Langley, Hertfordshire; † 1901 Bromley, Kent)

Vasilyi Vladimirovich Petrov (Василий Владимирович Петров, * 1761 Obojan; † 1834).

Henricus Petrus (Henric Petri, Heinrich Petri, * 1508 Basel; † 1579 Basel) leading printer in Basel.

Adam von Pettenegkh Pöttickh (Petek, * 1640/1645; † 1705).

Hans Petterson (Pettersson, * 1888; † 1966).

William Petty 2nd earl of Shelburne (* 1737 Dublin; † 1805).

Espirit Pezenas (Pézenas, * 1692 Avignon; SJ; † 1776 Avignon).

Christian Heinrich Pfaff (* 1773 Stuttgart; † 1852 Kiel).

Jože Pfeifer (* 1919 Ljubljana; † 1991 Idrija).

Gotfrid Pfeiffer (Gottfried Pfeifer, Pfejfer, Fajfar, * 5 March 1707 Radovljica areas at upper Carniola (Gorenjska), maybe Sorica; OMFConv 11 March 1724; † 1775/1780 Novo mesto).

Leopold Pfaundler von Hadermur (* 1839 Innsbruck; † 1920 Graz).

Anton Phillebois flourished as Viennese University's official editor of the paperback schematism in 1793-1824.

Anton Frederik Philips (* 1874; † 1951).

Friedrich Philips (Benjamin David, * 1830; † 1900).

Gerard Leonard Friderik Philips (* 1858; † 1942).

Robert Philips (* 1826; † 1906).

Abbé Jean Picard (* 1620; † 1682).

Karl Pichelmayer (* 6 August 1868 Bern village of municipality Bruck an der Mur; † 23 January 1914 Vienna).

Franz Pichler (* 1936 Thalgau by Salzburg).

Greenleaf Whittier Pickard (* 1877 Portland, Maine; † 1956 Newton, Massachusetts).

Giovan Francesco Pico della Mirandola (* 1463; † 1494).

Marc Auguste Pictet (* 1752; † 1825).

Raoul Pierre Pictet (* 1846; † 1929).

Lovro Pičman (* 1929 Ljubljana).

John Robinson Pierce (* 1910 Iowa; † April 2, 2002 California).

Victor Pierre (* 1819; † 1886).

Francesco Pifferi (* about 1548 Monte San Savino in Tuscany; O.S.B. Cam; † after 1604).

Gjuro Pilar (* 1846; † 1893).

Benedikt Pillwein (Benedict, * 1779 Obersulz in Lower Austra; † 1847 Linz).

David Pines (* 1924 Kansas City; † 2018 Urbana).

Hieronim Pinoccio (* 1612 Lucca; † 1676).

Luka Pintar (* 1857 Hotavlje in Poljanska dolina; † 1915 Ljubljana).

Vasilij Nikolaevič Pipunyrov (Василий Николаевич Пипуныров) published on history of chronometers in 1955-1986.

Marcello von Pirani (Manfred, * 1880; † 1968).

Edo Pirkmajer (* 1932).

Nikolaj Pirnat (* 1903; † 1948).

Ángela Piskernik (* 1886 Carinthia; † 1967).

Franz Joseph Pisko (Josef, * 1827 Rousínov (Neuraußnitz), Moravia; † 1888 Bad Aussee, Styria), taught geography and physics as director of Higher Real School Vienna- Sechshaus in 1872-1883.

Nikolai Georgievich Piskunov (Николай Георгиевич Пискунов, * 1886; † 1941) graduated from Physics and Mathematics Department of Saratov University where he worked fluent in European and ancient languages in 1920s.

Vladimir Pištalo (* 1960 Sarajevo).

Antonio Pizzarello (* 1846 Koper; † 1933 Macerata).

Antonio Pizzarello (* 1869 Koper).

Ugo von Pizzarello (* 1877 Macerata; † 1955).

Jean Plana (Giovanni Antonio Amedeo, * 1781; † 1864).

Plato (* 427 BC Athens; † 347 BC).

Lyon 1st Baron Playfair (* 1818; † 1898).

Josip Plemelj (* 1870; † 1967).

Joannes Baptista Planck (* 1696 Neumarkt in der Oberpfalz; † 1765 Munich).

Max Planck (* 1859; † 1947).

Johann Plank (* abt. 1845 Habsburg monarchy), High School professor in 1873 with some publications in his school Yearly (Jahresberichte).

Josef Plank (* abt. 1846 Hall in Tirol), holder of a war medal (Besitzer das Kriegsmedial (Kriegsmedialle)) as Gymnasium student soldier in war of 1859. During final years of his Viennese studies he served as supplied professor (Supplent, Amtskandidat) helping Karl Exner's classes of mathematics at Viennese Akademischen Gymnasium in 1868/69 and at Staats Gymnasium at third district of Vienna (III. Bezirke Wien) up to 1 September 1875. He researched as J. Stefan's assistant in Vienna from June 1875 until 1877. Then Plank became a full ordinary professor of mathematics and physics as a colleague of professor of philosophical propaedeutic Latin and German languages Janko Pajk in higher classes of k.k. Franz-Joseph-Gymnasium in Vienna at 1st Bezirk at Hegelgasse no. 3 from 1 September 1875 until Plank's retirement on 31 July 1905 in the schoolyear 1904/1905. That Grammar school (Staats-Gymnasium in der Inneren Stadt Wien, now Stubenbastei) was established on 4 October 1872 with that official name introduced on 21 April 1879. After 1921 it was called Bundesrealgymnasium Wien 1. Plank was probably the son of the portrait-history painter Josef Plank (* 1815 Hall in Tirol; † 1901 Vienna) (Jahres-*Bericht über das k. k. Akademische Gymnasium in Wien: für das Schuljahr 1868-1869*, 25-26; *Achter Jahresbericht über das k.k. Franz-Josephs Gymnasium in Wien*, 1882, Vienna, p. 31; *Sechzehnter Jahresbericht über das k.k. Franz-Josephs Gymnasium*, 1890, p. 1; *Fünfundzwanzigster Jahresbericht über das k.k. Franz-Josephs Gymnasium*, 1899, p. 2; *Einunddreißigster Jahresbericht über das k.k. Franz-Josephs Gymnasium*, 1905, p. 2; *Zweiunddreißigster Jahresbericht über das k.k. Franz-Josephs Gymnasium*, 1906, pp. 1-2, 16; 18. Jahresbericht über das k.k. Staats Gymnasium im III. Bezirke in Wien für das Schuljahr 1873).

Leopold Franz Ritter von Plappart (* 1744 Styria (Vransko?); † 29 January 1805 castle Spielfeld (Špilje) on Austrian side of Slovenian border or Maribor), Viennese medicinal PhD on Antimony in 1765, Land-Protomedicus of Styria after the death of

Sigmund R. Ritter von Katharin († 1778), related to another physician Joachim Friedrich Plappart von Frauenberg (* 13 March 1753 Vransko (Franz) in Lower Styria; † 1845 Graz).

Joseph Plateau (* 1801 Brussels; † 1883 Ghent).

Franjo Plentaj (* 1850/1851 probably in Polish Galicia; † November 24, 1901).

Georgius Gemistus Plethon (Pletho, Γεώργιος Γεμιστός, * 1355 Constantinopel; † 1452/54).

Wilhelm Heinrich Theodor Plieninger (* 1795 Stuttgart; † 1879 Stuttgart) the Stuttgart palaeontologist.

Pliny the elder (* 23/24; † 79).

Noel Antoine Pluche (* 13 November 1688 Rems; † 19 November 1761 Paris).

Julius Plücker (* 1801; † 1868).

Friedrich Carl Alwin Pockels (* 1865; † 1913).

Bogdan Podgornik, in 1977-2007 specialist for the precise mechanics at IEVT in Ljubljana later adjoined to the IJS.

Rudolf Podgornik (Rudi, * 1955 Ljubljana).

Nataša Podgoršek (* abt. 1976), professor at Faculty of Education (Pedagoška fakulteta) of Maribor University.

Roman Grigorievich Podolny (Роман Григорьевич Подольный, * 1933 Moscow; † 1990 Moscow).

Johann Christian Poggendorff (* 1796; † 1877).

Janez Krstnik Pogrietschnig (Johann Baptist Pogrietsnig, Pogričik, * 1722 Radiše (Radsberg) 10 km southeast of Klagenfurt; SJ 1745 Trenčin; † after 1782).

Robert Wichard Pohl (Weichardt, * 1884 Hamburg; † 1976 Gottingen), director of physics institute in Göttingen after 1920.

Karl Wilhelm Pohlke (* 1810 Berlin; † 1876 Berlin).

Jules Henri Poincaré (* 1854; † 1912).

Lucien Poincaré (* 1862; † 1920), physicist, brother of Raymond and cousin of Henri.

Raymond Poincaré (* 1860; † 1934), French Prime Minister (President).

Aloys de Poirot (Louis Antoine, 賀清泰, Hè qīngtài * 1735 Lorraine; SJ; † 1813 Beijing).

Jean Leonard Marie Poiseuille (* 1799; † 1869).

Denis Poisson (Simeon Dénis, * 1781; † 1840).

Joseph Polák (Ede József, Polak, * 1816 Dolný Pial (Alsópél) in Nitra region of southwest Slovakia; Piarist monk; † 1892 Budapest). After teaching at Debrecen, Vác, Nitra, Banská Štiavnica (Schemnitz) and Timisoara, he came to Kecskemét as the director of the main grammar school in 1862. His scientific papers appeared in the bulletins of the Kecskemét high school (főgimnázium). His articles were also published by the local journal *Kecskeméti Lapok* in 1868-1950. His relative Eduard Polák (Pollak) taught and published about mechanics and physics in Piarist's Grammar School in Banská Štiavnica in 1843-1859.

Natalija Polenec (* 1965 Kranj), the director of Technical Museum Slovenia in Bistra in 2014-2020.

Christopher von Polhem (Polhammar, * 1661; † 1751 Stockholm).

Giuseppe Saverio Poli (* 1746 Molfetta; † 1825 Napoli).

Feodor Polikarpov-Orlov (Феодор Поликарпович Поликарпов-Орлов, * 1667/1672 Moscow; † 1731 Moscow).

Efim Mikhaĭlovich Poliščuk (Ефим Михайлович Полищук, Polishchuk, * 1914 Kiev; † 1987).

Marco Polo (* 1254; † 1324).

Alexander Appolonovich Polumordvinov (Александр Аполлонович Полумордвинов, * 1874 Slobodskoy (Слободской) in modern Kirov oblast; † 2 December 1941 (by Gregorian calendar 1942) Kirov (Киров), previously Vyatka (Вятка) 900 km northeast of Moscow) taught mechanics, geometry, and drawing at Kazan Technical-Industrial School in 1898-1900, exhibited at Parisian *Exposition* Universelle in 1900, studied and worked in Petersburg until 1911, then in Kazan and Vyatka until his retirement on 30 November 1921.

marchioness de Pompadour (Jeanne Antoinette Poisson, * 1721; † 15 April 1764).

Mela Pomponius (* Tingentera/Cingentera in the gulf Algeciras) worked in 43.

Johann Heinrich Moritz von Poppe (* 1776 Göttingen; † 1854 Tübingen).

Viktor Ivanovič Popov (Виктор Иванович Попов, * 1895; † 1965).

Dragoslav D. Popović (Поповић, * 1926 Skopje; † 2013).

Vojin Popović (Војин Поповић, * 1914 Kragujevac; † 2008 Beograd).

Milentije Popović (Поповић, * 1913 Crna Trava in Serbia; † 1971).

Prince Janez Ferdinand Porcia (Portia, * 1606; † 1665).

Giovanni Battista dela Porta (* 1534/35; † 1615).

Janez Posch (OFMobs; † 3 January 1549 Ljubljana).

Jakob Pöschl (* 1828; † 1907 Graz).

Magdalena born Nömayer married Pöschl (* 1849).

Theodor Michael Friedrich Pöschl (* 1882; † 1955).

Viktor Pöschl (* 1910 Graz; † 1997 Heidelberg).

Victor Pöschl (* 1884 Graz; † 1948 Karlsruhe).

Herman Potočnik (Noordung, * 1892 Pula; † 1929).

Jožef Potočnik (Josef, * 1841 Zgornji Razbor near Slovenji Gradec; † 1894 Pula).

Claude Servais Mathias Pouillet (* 1791; † 1868).

Bogdan Povh (* 20 August 1932 Beograd).

Jože Povšič (* 1907 Dobrava pri Škocjanu; † 1985 Ljubljana).

Cecil Frank Powell (* 1903; † 1969).

Henry Power (* 1623; † 1668).

Edme Pourchot (Edmond, Edmundus Purchotius, * 1651 Poilly-sur-Tholon; † 1734 Paris).

Bernard Pourprix (* abt. 1945) professor of epistemology and history of sciences at the university of Lille and at IUFM (Institut Universitaire de Formation des Maîtres) du Nord - Pas de Calais of University Artois in northern France.

Jesuit Luis de Lossada Prada (* 1681 Quiroga; † 1748 Salamanca).

Juan Martínez de Prado (* early 17th century; OP Santa Cruz de Segovia; † 25 February 1668 Segovia).

Johannes P. Praetorius (* 1537; † 1616).

Georges Pralus (* 1940; † 2014).

B. S. N. Prasad of Department of Physics, Utkal University, 751004, Bhubaneswar, India, later joined the Department of Physics, Mysore University P. G. Centre Mangalagangotri, Konaje, 574152, Karnataka, India.

Velimir Pravdić (* 1931 Zagreb; † 2011 Zagreb), chemist and natural resource conservationist.

György Pray (Georgius, Georg, * 1723 Nové Zámky (Érsekújvár, Neuhäus[e]l, Novum Castrum) in southwestern Slovakia; SJ 1740 Vienna; † 1801 Pest).

Johann Joseph Prechtl (* 1778, Bischofsheim; † 1854, Vienna).

Erazem Predjamski (Luegg, Erasmus Lueger, † 1484 Luegg by Postojna (Lueg, Jama pri Postojni)).

William Henry Preece (* 1834 Bryn Helen, Caernarvon, Wales; † 1913).

Andrej Pregelj (* 30 June 1944 Ljubljana).

Peter Prelovšek (* 1949).

Primož Premzl teacher of physics and publisher in Maribor.

Martinus Prenner (* September 10, 1746 Škofja Loka).

Samuel Tolver Preston (* 1844; † 1917).

France Prešeren (* 1800; † 1849).

Janez Prešeren von Heldenfeld (Presheren, * Heldenfeld (Field of Heroes, Hraše) by Lesce na Gorenjskem; † 17 June 1814 parish Brezovica).

Johan Bapt de Presheren from Heldenfeld (Hraše) (lay brother Ivo Prešern, Janez Prešeren, Presheren, * abt. 1600 Hraše; OFMobs; † 13 January 1679 Sv. Leonard).

Janez Krstnik Presheren (Radmanstorfensis, * 1656 Hraše; † 1704 Ljubljana as the capitol provost and head of Academy Operosorum there).

Janez Krstnik Presheren (* 6 November 1680 Hraše; ennobled 1724 as de Preschern in Heldenfeld; † 19 April 1746 Ljubljana), Ljubljana Provost's relative and namesake, the sworn court lawyer of Carniola institutions as the highest official in Carniolan courts.

Joseph Mathias Prešeren von Heldenfeld (Hraše) by Radovljica (Matija Presheren, * abt. 1710 in Parish Radovljica; † after 1760 as a priest in Vransko).

Marija Prešeren (* 12 November 1837).

Johann Prettner (* 1812; † 1875).

Nikola Prica (Priča, * 1853 Korenica; † 1903 Karlovac).

Fraser Pierpont Price (* 1917; † 1977).

Derek John De Solla Price (* 1922 Leyton, UK; † 1983 New Haven), Yale Professor of the History of Science.

Joseph Priestley (* 1733; † 1804).

Gregor Primc (* 1984) Full-time researcher at Jožef Stefan Institute, Director of the firm Plasmadis with deputy director Miran Mozetič after 2018.

Ernst Pringsheim (* 1859; † 1917).

Peter Pringsheim (* 1881; † 1963).

Peter Probst (* 1699 Vienna; SJ 1718 Vienna; † 1750 Bavaria?).

William Prout (* 1785 Horton in Gloucestershire; † 1850 London).

Joseph Prudent Frédéric Herve de la Provostay (* 1812 Bréhier; † 1863 Algiers in Algeria).

Karl Przibram (* 1878 Vienna; † 1973 Vienna).

Francesco Puccineli (* 1741; † 1809).

Anton Puchta (* 1851 Staré Sedlo in Bohemia; † 1903 Černovice (Чернівці)).

Rudolf Gustav Puff (* 1808 Holzbaueregg in western Styria; † 1865 Maribor).

Boris Jakovlevič Pugač (Jakovlevich Pugach, Борис Яковлевич Пугач) graduated from Kharkiv (Kharkov) State University as an "engineer-physicist" in 1968. In 1996 he defended his doctoral dissertation on "Observability and unobservability in natural science" focused to ontology, epistemology, phenomenology. In 2002 he received the academic title of Professor at the Department of Theory of Culture and Philosophy of Science in Kharkiv (Kharkov).

Janez Puh (Johann Puch, * 1862; † 1914).

Janez Puhar (* 1814; † 1864).

Simon Puljer (* 22 October 1832 Eberndorf).

Ivan Pavlovich Pului (Johann Puluj, Іва́н Па́влович Пулю́й, Iwan Pawlowytsch, * 1845 Hrymailiv in Galicia, now in Ukraine; † 1918 Prague).

John Punch (Joannes Poncius Hyberno Corcagiensi, Pontius, Ponce, * 1599/1603 Cork in Ireland; OFM Leuven; † 26 May 1661 Paris (or 1672/73)).

Franz Georg Puntschart (* 1816; † 1872).

Franz Puntschart († 1890).

Mihajlo Pupin (* 1858; † 1935)

Georg Purbach (von Purbachius, Peurbach, Purbachius, * May 30, 1423; † April 8, 1461 Vienna).

Edward Mills Purcell (* 1912 Illinois; † 1997).

Karel Puschl (Karl Puschel, baptized Josef, * 1825 Wolfsbach in Lower Austria; OSB 1846 Seitenstetten; † 1912 Seitenstetten in Lower Austria 49 km east of Kremsmünster with the city Steyr in between) taught mathematics, physics, and other subjects at monastic Benedictine gymnasiums in Melk and Seitenstetten between 1853-1871, later gradually blind but continued to publish about aether. Puschl criticized Clausius in an important controversy about the basic theory of gases in *Wien.Ber*. in 1862 and 1863.

Ferenc Puskás (* 1848; † 1884).

Tivadar Puskás (* 1844; † 1893).

Gedeone Pusterla (pseudonym of Andrea Tommasich (Tomasich, Tomassich), * 1820 Koper; † 1898 Koper).

Lewis Robert Pyenson (* 1947 USA).

Pythagoras of Samos (* c. 570; † c. 495 BC).

Joseph Baron Quarin (* 1733; † 1814).

Jean Antoine Quet (* 1810; † 1884).

Adolphe Quetelet (* 1796 Ghent; † 1874 Brussels), the Belgian statistician.

Hermann Georg Quincke (* 1834; † 1924).

R

Franciscus Antonio de Raab (* 1755 Ritter von Raab zu Ravenheim, 1722 Klagenfurt; † 1783 Vienna).

Claude Rabuel (* 1669 Pont-de-Veyle; SJ 1685; † 1728 Lyon).

Philip D. Rack (* 1971), associate professor at the department of Materials Science and Engineering at the University of Tennessee, Knoxville in 1994.

Johann Radakovits (Radakovič, * 1877 Celje).

Michael Radakovits (Radaković, * 1866 Graz; † 1934 Graz).

Momčilo Radić, professor at Middle School (Srednja elektro-računalniška šola) in Maribor, published in 1982-1992.

Nikola Radić at Division of Materials Physics Department, Rudjer Bošković institute in Zagreb.

Janez Krstnik David Radio (* 23 February 1740 Gorizia; OFM 8 September 1760; † 26 January 1810 Ljubljana)

Piotr Wysz Radoliński Leszczyc (* abt. 1354; † 30 September 1414).

Leonard Bronisław Radziszewski (pseudonym Ignacy Czyński as Polish fighter for independence, * 1838 Warsaw; † 1914).

Janez Friderik von Rain (Joannes Frideric, * 1613; † after 1693).

Franc Henrik (Joseph) baron Raigersfeld (Rakovec, * 1697; † 1760).

Karel-Charles Franc Borgia Raigersfeld (* 1736; SJ; † 1800).

baron Michael Amadeus Janez Nepomuk Raigersfeld (Rakovec, * 1744; † 1783).

Chandra Kant Raju (* 1954 Gwalior, Madhya Pradesh in India).

Edward Granville Ramberg (* 1907 Firenze; † 1995), Quaker, Arnold Sommerfeld's student and translator of his Electrodynamics in 1952. Worked for RCA in 1935-1972, uncle of Nobel laureate molecular geneticist Mario Ramberg Capecchi (* 1937).

Agostino Ramelli (Augustin Ramell, * 1531 Ponte Tresa now in south Switzerland; † 1600 Paris).

Fran Ramovš (* 1890 Ljubljana; † 1952).

Jesse Ramsden (* 6/10/1735 Halifax; † 5 November 1800 Brighton).

Anton Ramšak, University of Ljubljana, Faculty of Mathematics and Physics.

Aquinas Ramutha (* 1787; † 1861).

John Randall (* 1905; † 1984).

Jørgen Randers (Jorgen, * 1945 Worcester, England), Norwegian.

Katherine Jones viscountess Ranelagh (* 1615; † 1691).

Richard Jones 1st Earl of Ranelagh (* 1641; † 1712), the Viscount Ranelagh between 1669 and 1677.

William John Macquorn Rankine (* 1820; † 1872).

Aleksandar Ranković (nom de guerre Marko, * 1909 Draževac, Serbia; † 1983 Dubrovnik, Croatia).

Heinrich Ranschburg (* 1860; † 1914).

Heinrich's son Otto Ranschburg (* 1900; † 1985).

René Rapin (* 1612; † 1687).

Fjodor Vasiljevich Rastopchin (* 1763; † 1826).

Gerhart Wolfgang Rathenau (* 1911 Charlottenburg; † 1989 Waalre).

Joseph Aloisius Ratzinger (* 1927 Marktl am Inn in Bavaria), the ruling pope Benedict XVI in 2005-2013.

Matjaž Ravnik (* 1953; † 2009).

John Ray FRS (* 1627; † 1705).

John William Lord Rayleigh (* 1842; † 1919).

Guillaume-Thomas-François abbé Raynal (* 1713; † 1796 Paris).

Marko Razpet (* 1949 Planina pri Cerknem).

Ksenia Aleksandrovna Razumova (Ксения Александровна Разумова, Xenia Razumova, * 1931).

Kirill Grigoevich count Razumovsky (Разумовский, * 1728; † 1803).

René Antoine Ferchault de Réaumur (* 1683; † 1757).

Marius Rebek (Marij, * 1889 Barkovlje (Barcola) suburb of Trieste; † 1982).

Valentin Redeschini De Haidovio (Radeschini, * 21 July 1746 Ajdovščina, OFMCap 1765; † 4 February 1810 Gorizia).

Paul Aveling Redhead (* 1924 Brighton; † 2005 Ottawa).

Ignatius Redlhamer (Ignac Redelhamer, Redlhammer,* 1719 Erlauf in Lower Austria; SJ 1735 Vienna; † 1795 Eberndorf (Dobrla vas) in Carinthia) taught philosophy on Ljubljana in 1755-1756 as the younger brother of Bošković's fan Josef

Redlhamer (* 20 October 1713 Erlauf; SJ 1731 Vienna; † 9 July 1761 Vienna).

Ferdinand Redtenbacher (* 1809; † 1863).

Jacob Ferdinand Redtenbacher (* 1809; † 1863).

Joseph Redtenbacher of Kirchdorf, the father of Josef, Ludwig, and Wilhelm.

Josef Redtenbacher (* 1810; † 1870).

Ludwig Redtenbacher (* 1814; † 1876).

Wilhelm Redtenbacher, the Viennese physician.

Richard Furman Reeves (* 1936 New York; † 2020 Los Angeles) was an American writer, syndicated columnist, and lecturer at the Annenberg School for Communication at the University of Southern California in Los Angeles.

Erich Regener (* 1881 Wilczak in Poland; † 1955 Stuttgart).

Johann Müller Regiomontanus (* 1436; † 1476).

Pierre Sylvain Régis (* 1632; † 1707).

Henri Victor Regnault (* 1810; † 1878).

Noël Regnault (Noel, Natalis, * 1683; † 1762).

Franc Ludvik Regner knight Bleileben (Franz Ludwig Regnier Ritter von Bleyleben, Vjenceslav Nepomuk, * 1795 Chotimir in Brno city-district; † 23 December 1854 Nin by Zadar).

Anton Franz Reibenschuh (* 1840 probably a son of the innkeeper at Dogoše suburb of Maribor on the right bank of the Drava River (Lehndorf by Marburg) at east Maribor Pobrežje District; † 25 July 1902 Graz Grabenstrasse no. 28) published from 1867 to 1903 as the Assistant of chemistry at lab of Nikola Tesla's friend-professor Richard Maly at Graz Polytechnic (Technischen Hochschule zu Graz), professor at Higher Real school in Maribor, professor at Higher Real school Graz (Staatsoberrealschule) in 1875/1878-1891 and director there in 1895. He died as unmarried Marienbrüder of tuberculosis followed by a funeral on 27 July at Graz-Graben church (Steiermark Rk. Diözese Graz-Seckau Graz-Graben Sterbebuch III 1867-1909. Page 618 no 84 (first)).

Günter Reich, former worker at Gaede Archiv at Vochemer Straße no. 9 in Köln.

Leonard S. Reich (Lenny) of Rutgers University, professor of administrative science and science-technology studies at Colby College at Mayflower Hill, Waterville, Maine from 1986 until his retirement in 2014.

Carl Ludwig baron Reichenbach (* 1788; † 1868).

Constance Reid (born Bowman, * 1918 Saint Louis; † 2010 San Francisco), the sister of mathematician Julia Hall Bowman Robinson (* 1919; † 1985) who paved the way to solution of Hilbert’s 10th problem.

Friedrich Reinitzer (* 1857 Prague; † 1927 Graz).

Wenceslaus Laurentius Reinner (Václav Vavřinec Reiner, * 1689; † 1743).

Philipp Reis (* 1834 Gelnhausen; † 1874 Friedrichsdorf).

Matej Reiser (Matevž, * 1830 Weilersbach in Baden; † 1895).

Otmar Reiser (Othmar, * 1792 Villingen in Schwarzwald; † 1868 Maribor).

Joseph Reisner (Josip, * 1875; † 1955).

Branko Reisp (* 1928 Žiri; † 2009 Ljubljana).

Eugen Reisz (Eugen Reiss, Eugen Reiß, * 1879 Budapest; † 1957).

Anton Emil Reithammer, Ptuj based apothecary, published in 1865-1870, meteorological observer at Ptuj (Pettau) station in 1864-1874.

Max Reithofferplatz (* 27 October 1864 Vienna, † 10 March 1945).

Edmund Reitlinger (* 1830 Pest; † 1882 Vienna) as a professor of physics at the Viennese High School of Technology taught Rudolf Steiner. For many years Reitlinger edited the Natur- und Völkerkunde (nature and ethnology) section of the Viennese *Neuen Freien Presse* (New Free Press).

Leopold Rembold (Ludwig, * 1785/87 Dietenheim in Baden-Württemberg; † October 4, 1844 Vienna).

Johann Remmelin (* 1583 Ulm; † 1632 Augsburg).

Maja Remškar (* 1960 Ljubljana).

Alojzija Renko married Markič (Markitz, † 1962).

Anton Renko († 1968).

Franc Renko († 1982).

Janez Renko

Jera Renko (* March 14, 1907).

Ljudmila Renko married Haldane (Mila translated as People's pleasure, * 24 December 1919 Borovlje (Ferlach); † August 2016).

Pepi Renko

Theresa Renko married Scheiber († 1998).

Peter Resch († after 1918).

Josef Ressel (* 1793; † 1857).

Joseph Friedrich baron Retzer (* 1754 Krems an der Donau; † 1824 Vienna).

Carlo de Reutter (friar Marian, * 1734; Cistercian; † 1805), violinist, the eldest son of the Viennese composer George Reuter (* 1708; † 1772).

Anton Reviczký (Antal Reviczky, Reviczki, * 1723; SJ; † 1781 Trnava).

Emil du Bois-Reymond (* 1818; † 1896).

Jean F. Reynier (* 1730).

Jean Louis Antoine Reynier (* 1762 Lausanne; † 1824 Lausanne).

general Jean Louis Ebénézer Reynier (* 1771 Lausanne; † 1814).

Osborne Reynolds (* 1842; † 1912).
Igor Aleksandrovich Rezanov (Игорь Александрович Резанов, * 1927 Dvoryanskoe at Syzransky Uyezd of Simbirsk Governorate (Дворянское Сызранского уезда Ульяновской губернии); † 2006 settlement Kljazma in Pushkinsky District at Moscow Oblast (Klyaz'ma, пос. Клязьма Пу́шкинский райо́н), Doctor of Geological and Mineralogical Sciences, chief researcher at the Institute of the History of Natural Science and Technology named by S.I. Vavilov at Russian Academy of Sciences (RAS, PAH).

Alexandre de Rhodes (* 1591 Avignon; SJ; † 1660 Isfahan in Persia).

George de Rhodes (* 1597; SJ; † 1661).

Johannes Rhotert (Rhoters, * 1847; † 1925 Osnabrück?).

Tommaso Agostino Ricchini (* 1675 Cremona; OP (Dominican Friar); † 1762 Rome) became secretary of the Congregation of the Index and examiner of the bishops in 1749.

Michelangelo Ricci (* 1619 Rome; cardinal 1681; † 1682 Rome).

Jean (or Jeanne) Richard, might have been related to the French botanist Jean Michel Claude Richard (* 1787 Volon, Haute-Saône; † 1868) under whose direction many new species were introduced to Senegal. Might also have been related to Henri Richard (* 1880) who founded the Parisian Cafés Richard.

Owen Willans Richardson (* 1879; † 1959 Alton)

William Richardson surgeon Fellows of the Society of Antiquaries of Scotland (F.S.A. Sc.) practiced at Newton Street of central Birmingham in 1790.

Ulrich of Richenthal († abt. 1438).

Georg Wilhelm Richman (* 1711; † 1753)

Kurt R. Richter, professor emeritus at Graz University of Technology, Institute of Fundamentals and Theory in Electrical Engineering (Institut für Grundlagen und Theorie der Elektrotechnik - IGTE, Technische Universität Graz).

Mathias Rieberer (* 1730 Murau of Upper Styria; † 1794 Regensburg).

Alois Riedler (* 1850 Graz; † 1936).

Christian Rieger (* 1714 Vienna; † 1780 Vienna).

Johann Christoph Rieger (* c. 1696 Prussia; † 1774 The Hague), practical physician in Moscow.

Paul Joseph Riegger (* 1705 Freiburg im Breisgau; † 1775 Vienna).

Alois Adolf Riehl (Aloys, * 1844 Riehlhof by Bolzano (Bozen); † 1924 Neubabelsberg by Potsdam).

Nikolaus Riehl (* 1901 Saint Petersburg; † 1990 Munich).

Franz Xavier Riepl (Laurenz, * 1790 Vienna; † 1857 Graz).

Peter Theophil Riess (Gottlieb Rieß, * 1805 Berlin; † 1883), the academician in Berlin.

Anna Rigelnik (* 25 July 1858).

Augusto Righi (* 1850; † 1920).

Georges-Pierre-Édouard Rignoux, resided at Surgères in Charente-Inférieure 70 km east of city Charente in southwestern France in 1906-1908.

Sven Rinman (Rinmann, * 1720 Uppsala; † 1792 Eskilstuna).

Rinsō Aochi (青 地 林宗, * 1775; † 1833).

Martin Antoine del Rio (Delrio, * 17 May 1551, Antwerp; SJ 9 May 1580 Valladolid; † 19 October 1608 Leuven)

Gotō Rishun (後 藤 梨 春, * 1696; † 1771).

Akisato Ritō (秋 里 籬 島, worked 1780-1814).

Rudolf Ritschl (* 1902 Bonn; † 1982 Berlin)

Johann Wilhelm Ritter (* 1776 Zamienice in Silesian southwestern Poland; † 1810).

Auguste Arthur de la Rive (* 1801 Geneve; † 1873 Marseilles).

Lucien de la Rive (* 1834 Choulex; † 1924 Geneve)

Francesco Robba (* 1698; † 1757).

Nicolas Marie-Noel Robert (* 1761; † 1828).

Martyn John Roberts (* 1806 Wales; † 1878 Wales).

Robertson (Étienne-Gaspard Robert, * 1763 Liège; † 1837).

Joseph Clinton Robertson (pseudonym Sholto Percy, * c.1787; † 1852).

William Robertson (* 1721; † 1793).

Giles Person de Roberval (Personnier, * 1602; † 1675).

Karel Robida (baptized Lucas, * 1804 Mala Vas on banks of Sava river by Ježica now north part of Ljubljana; † 1877 Klagenfurt).

Denis M. Robinson (* 1907; † 1994).

Harold Roper Robinson FRS (* 1889 Ulverston in Lancashire south of Manchester in northern England; † 1955 London?).

John Robison (* 1733 Boghall at Glasgow; † 30 January 1805 Edinburgh).

John Wilmot Earl of Rochester (* 1647; † 1680), Alan J. Rocke (* 1948 near Chicago, Illinois).

Johann Baptist Rogner (* 1823; † 1886).

Walter Rogowski (* 1881; † 1947).

Jacques Rohault (* 1620; † 1675).

Maximilian Eduard Rohm (* 30 January 1855 Neustadl (Náchod or Nové Město nad Metují) in Bohemia).

Theodor Rohm (* 1883; † 27 January 1953).

Theodor Rohm (* 1848/1849 Neustadl in Bohemia; † 10 January 1907 in Viennese 8th Bezirk Lenaugasse no. 2).

Wilhelm Julius Paul Rohn (* 1887 Dresden; † 1943).

Julius Bernhard von Rohr (* 1688; † 1742).

Heinrich Rohrer (* 1933 Buchs SG; † 2013 Wollerau).

Thomas Romich (Tomaž Romih, * December 8, 1853 Maria Dobje by Planina between Sevnica and Šentjur southeast of Celje; † 1935 Novo mesto).

Wilhelm Konrad Röntgen (Roentgen, * 1845; † 1923).

Michel Rosa (* 1731; † 1812).

Gustav Rose (* 1798 Berlin; † 1873 Berlin).

Karl Rosenberg (* 1861 Graz; † 1936 Graz) after 1913 titular full professor for Methodology of Physics at the University Graz.

Robert A. Rosenberg published about Edison in 1991-2015.

Ferdinand Rosenberger (* 1845 Lobeda by Jena; † 11. September 1899 Oberstdorf in Bayern).

Ignac count Rosenberger (Rosenberg, * 3 March 1724 Vienna as noble of Carinthia origin; SJ 2 November 1741 Trenčin; † 20 February 1801 Ljubljana).

Marshall Nicolas Rosenbluth (* 1927 Albany, New York; † 2003 San Diego, California).

Mitja Rosina (* 1935 Ljubljana).

Boris L'vovich Rosing (Борис Львович Розинг, * 1869 Petersburg; † 1933 Archangelsk).

Robert W. Rosner (* 1924 Vienna).

Andrew Ross (* 1956 lowlands of Scotland) emigrated to US in 1985.

Hugh Munro Ross (* 1870 Bexleyheath, Kent; † 1954 Eastbourne, East Sussex), Oxford classical graduate, editor of *The Times Engineering Supplement* as the journalist of *Times* from 1893 to 1946.

Ian Munro Ross (* 1927 Southport, UK; † 2013 New Smyrna Beach, Florida) ultimately served as the sixth President of Bell Labs 1979–1991.

Svein Rosseland (* 1894 Kvam in Vestland county, Norway; † 1984).

Francesco Rossetti (* 1833 Trento; † 1885 Padova).

Albert Salomon Anselm baron Rothschild (* October 29, 1844; † February 11, 1911).

Salomon Mayer von Rothschild (* 9 September 1774; † 28 July 1855).

count Henry Frances Rottenhan (* 1738; † 1809).

Henry Augustus Rowland (* 1848 Honesdale, Pennsylvania; † 1901).

Thomas D. Royds (* 1884 Lancashire; † 1955).

Abbé François Rozier (* 24 January 1734 Lyon; † 29 September 1793 Lyon).

Abbé Jean François Pilâtre de Rozier (* 1754; † 15 June 1785).

Franc Rozman (* 1941 Bled).

Anton Rožič (* 27 November 1791 Lower Tuštanj no, 12; † 23 March 1837 Lower (Spodnji) Tuštanj by Moravče in central Slovenia).

Viktor Ruard (* 1814 Stara Sava by Jesenice; † 1886 Stara Sava).

Paola Rubbi (* 1724; † 1749).

Alessandro Rossi da Lugo (Alexander Rubeus de Lugo, * 1607 Lugo by Ravenna; OFMconv 1624 Bologna; † 1686 Assisi?).

Antun von Rubido de Zagorje (Antal Zuchý, * 1817 Klanjec or Madrid; † 1863).

Sidonija Erdődy Rubido (* 1819 Zagreb; † 1888 Gornja Rijeka by Kalnik).

Woyciech Rubinowitcz (Vojteh, Adalbert, * 1889; † 1974).

Antonio Rubio (Ruvius, * 1548 La Roda in Spain; SJ; † 1615 Alcalá) taught philosophy and theology in Mexico for a long time.

Reinhold Rüdenberg (Rudenberg, * 1883 Hanover; † 1961 Boston).

Karel Dragotin Rudež (* 1833 Ribnica; † 21 January 1885 Gracarjev Turn).

Waren de la Rue (* 1815; † 1889).

Alexis Baron Ruessenstein (flourished 1663-1694).

Konrad Baron Ruessenstein († August 12, 1668).

Ingolf Hermann Max Ruge (* 1934 Świdnica in Silesian south-western Poland (Schweidnitz).

Heinrich Daniel Ruhmkorff (* 1803; † 1877).

Benjamin Thomson count Rumford (* 1753 Woburn; † 1814 Paris).

Jakob Rumpf (* 1827 Graz).

Georg Eberhard Rumphius (George Rumpf, * 1627 Hessen; † 1702 Ambon Island as part of the Maluku Islands of Indonesia).

Lado Rupnik (* 1934).

Leon Rupnik (* 1880; † 1946).

Girolamo Ruscelli (* 1500 Viterbo; † 1566 Venice) published under his pseudonym Alessio Piemontese (Alexius Pedemontanus, * abt. 1471).

Ludwig Ruschitzka studied technic in Bohemian Ostrava and obtained his PhD at Faculty of Technical sciences of Freiberg Mining Academy (Bergakademie) in 1971 and 1988.

Ernst Ruska (* 1906 Heidelberg; † 1988 Berlin).

Helmut Ruska (* 1908 Heidelberg; † 1973 Düsseldorf)

Henry Norris Russell (* 1877; † 1957).

John Scott Russell (* 1808 Parkhead, Glasgow; † 1882 Ventnor, Isle of Wight).

Vinko Rutar (Venčeslav, * August 30, 1950 Modrej on the right bank of the Soča River north of Most na Soči, Municipality of Tolmin in the Littoral region of Slovenia), former Blinc's F5 collaborator with PhD in 1980. From 1986 to 1990 he headed the Nuclear Magnetic Resonance Imaging Laboratory at Iowa State University in Ames. He has been with Union Carbide since 1990 also as a senior researcher at the Bound Brook Technical Center in New Jersey until he turned Director of Quality at Absorption Systems LP at Greater Philadelphia Area.

Ernest Rutherford (* 1871; † 1937).

Walther Hermann Ryff (Gualtherus Hermenius Rivius, Ryf, Reif(f), Ru(e)ff, Rivius, parts published with pseudonyms connected to Tarquinius Schnellenberg, Tarquinius Ocyorus, Quintus Apollinari). * around 1500 perhaps in Strasbourg; † 1548 Würzburg).

Heiner Ryssel (* 1941 Plaue, Germany).

S

Loredana Sabaz (previously married Deranja, published 1989-2020).

general Sir Edward Sabine (* 1788 Dublin; † 1883 London).

Johannes de Sacrobosco (* c. 1195; † c. 1256).

Antoine-Isaac Silvestre de Sacy (* 1758 Paris; † 1838 Paris).

James Ballerum James Sadler (* 1753; † 1828).

Charles Sadron (* 1902 Cluis; † 1993 Orléans).

Henri de Saint Michel († 1793 Munich).

Chin-Tang Sah (薩支唐, * 1932 Beijing).

Megnad Sah (* 1893; † 1956).

Bernardino de Sahagún (born Bernardino de Rivera (Ribera, Ribeira), * c. 1499 Sahagún; OFM; † 1590).

Carl Reinhold Sahlberg (* 1779 Eura, Finland; † 1860 Yläne, Finland).

Johann Sahulka (Sakulka, * 1857 Deutsch-Wagram in Lower Austria; † 1927 Vienna).

Henry Étienne Sainte-Claire Deville (* 1818; † 1886).

Antoine count de Saint-Exupéry (* 1900; † 1944).

Fumikazu Saito (斎藤文一) professor of history of science at Pontifícia Universidade Católica de São Paulo (PUC-SP, Pontifical Catholic University) in Brazil.

Tordas Kaloz Sajnovics (Sainiovics, * 1733 Tordas; † 1784 Pest).

Giovanni Generoso Salomoni printed-published in Rome in 1748-1786.

Peter Salcher (* 1848; † 1828).

Rudolf Saliger (* February 1, 1873, Spachendorf at Freudenthal in Silesia now Leskovec nad Moravicí (Špachov) in Czechian Moravia; † 31 January 1958 Vienna).

Albert Samassa (* 1808; † 1883).

Albert Samassa (* 1833; † 1917).

Maurizio Sangalli (* 1968 Lovere by Bergamo in Italy).

Bernard Sannig (Bernard ze Slezska, * 1637 Nysa in Polish Silesia; OFM 1655 Nysa; † 1704 Znojm).

Joseph Sapetz (* Všechovic in Moravia).

Sakuma Shōzan (佐 久 間 象山, Zōzan, * 1811 Shinshu; † 1864).

Jacques Frédéric Saigey (* 1797 Montbéliard; † 1871 Paris).

Antonio Salieri (* 1750; † 1825).

lord Robert Cecil third Marquis Salisbury (* 1830; † 1903).

François-Étienne Dutour de Salvert (* 1711 Bailleul (Nord) ; † 1789 Riom in central France).

Maks Samec (* 10 October 1844 Arclin by Vojnik by Celje; † 19 August 1889 Šutna in Kamnik).

Maks Samec the younger (* 27 June 1881; † 1 June 1964).

Antonio-Nunes Ribeyra Sanchez (Ribeiro Sanches, * 1699 Penna-Macor; † 1783 Paris).

John Milton Sanders (* 1815 Cincinnati in Ohio; † 1880 Santo Domingo City in Caribbean).

Santorio Santorio (* 29 March 1561 Koper; † 22 February 1636 Venezia).

John C. Sarace (Carl, * New Jersey?), earned a BS from the University of Michigan.

Sarben Sarkar, Professor in Theoretical Physics at King's College London.

David Sarnoff (Дави́д Сарно́в, * 1891 Uzlyany by Minsk; † 1971 Manhattan).

Horace Bénédict de Saussure (* 1740; † 1799).

Nicolas Théodore de Saussure (* 1767; † 1845).

Félix Savart (* 1791; † Paris).

Alexandre Saverien (* 1720; † 1805).

Servington Savery (* 1669; † 1744 Shilstone in Devonshire).

Thomas Savery (* 1650 Shilsone in Devonshire; † 1715).

Pavle Savić (* 10 January 1908 Thessaloniki (Solun); † 1994).

William Edward Sawyer (* 1850 Brunswick in Cumberland County, Maine; † 1883 New York).

James Sayers (* 1912; † 1983).

Albert of Saxony (* c. 1320; † 1390).

Carlo Sbuelz (Karol Žbuelz, * 1844 Solkan by Gorizia).

Joseph Justus Scaliger (* 5 August 1540 Agen in France; † 21 January 1609 Leyden).

Bartolomeo Scappi (* 1500; † 1577).

Vincent Schaefer (* 1906 Schenectady; † 1993 Schenectady).

Johan Josef Franz Berthold Schaffgotsch (* 17 October 1741; † 1806).

Johan's half-brother Franz de Paula Ernst Schaffgotsch (* 27 December 1743 Horní Maršov; † 1809 Prague).

Jernej Schaller (Bartholomew, * 24 August 1745 Viennese suburb; SJ; † 29 April 1803 Ljubljana).

Carl Schapira (* 1879 Gdansk; † 1957 New York).

Morten Scharff (* 1926 Tibirke 60 kilometres north of Copenhagen; † 1961 Copenhagen).

Josef Schaschl (Šašel, Šašl, * 15 February 1860 Slovenji Plajberk (Windisch Bleiberg, Svinčnica); † 1908/1909).

Ludwig Schedius (* 20 December 1768, Raab (Györ); † 12 November 1847 Pest).

Karl Wilhelm Scheele (* 1742; † 1786).
Friedrich Wilhelm Joseph Schelling (* 1775; † 1854).

bishop of Bamberg Georg Schenk von Limpurg (* 1470; † 1522).

Karl Scherffer (* 1716 Gmünden; SJ 1732; † 1783 Vienna).

Paul Scherrer (* 1890; † 1969 Zurich).

Michael Brian Schiffer (* 1947 Winnipeg, Canada).

Jožef Anton Schiffrer von Schiferstein (Šifrer, * 1677 Kranj; † 1756).

Karl Christoph Schmeider (* 1778 Eisleben; † 23 1850 Kassel).

Anton E. Schindler (* 1921).

Wilhelm Schimitzek (* 1847 Silesia; † 1914 Vienna).

Ludwig Schiviz von Schivizhoffen (Ludovik Šivic, * 1859 Zagreb; † Ljubljana).

Arthur Schleede (* 1892 Berlin; † 1977), collaborator of Schröter in 1930s, from 1930 to 1935 associate professor of inorganic chemistry at the University of Leipzig, from 1935 to 1945 and from 1954 until retirement in 1957 taught inorganic chemistry at the Technical University of Berlin. Member of the NSDAP since 1933, signed the

German universities professors' confession to Adolf Hitler.

August Wilhelm Schlegel (* 1767 Hanover; † 1845 Bonn).

Wilhelm Schloemilch (*1870 Leipzig; † 1939 Schmöckwitz by Berlin).

Oscar Xaver Schlömilch (* 1823 Weimar; † 1901 Dresden).

Franz Schmelzer (* 27 June 1678 Vienna; SJ 9 October 1695 Vienna; † 26 January 1738 Vienna). Anton Ritter von Schmerling (* 1805 Lichtental by Vienna; † 1893 Vienna).

Josef Camilo baron Schmidburg (* 1779 Graz; † 1846 Vienna).

Georg Gottlieb Schmidt (Luftschmidt, * 1768; † 1837 Giessen).

Gustav Johann Leopold Schmidt (* 1826 Vienna; † 1883 Prague) after studies at Viennese Polytechnic assisted F. Redtenbacher in Karlsruhe in 1856-1858 to become a docent for mechanical engineering (Maschinenbau) in Přibram hired on 2 August 1859, then transferred to Leoben and to then Russian Riga on 1 August 1862. After 1864 full professor of mechanical engineering at German Polytechnic in Prague.

Martin Johann Schmidt (Kremser Schmidt, * 25 September 1718 Grafenwörth of Lower Austria east of Krems on the way to Vienna; † 1801 Stein-sur-Danube).

Vlado Schmidt (Vladimir, * 1910 Prebold in Savinjska dolina; † 1996 Ljubljana).

Eugène II Schneider (* 1868 Le Creusot; † 1942 Paris).

Anselmus Schnell (Anselm, OSB; † 1751 Weingarten),

Tarquinius Schnellenberg (alias Tarquinium Syprum, alias Schnellenbergium, * ca. 1490 Attendorn/Westfalen, † 1561 Travemünde).

Johan Baptist Schober (* 1783 Oberweißenbach; † 1850 castle Mühldorf, Feldkirchen a.d. Donau).

Josef Schober (* 1777 Ljubljana; † 1809 Vienna).

Friedrich Schoedler (* 1813 Dieburg in Hessen; † 1884 Mainz).

Benjamin Scholz (* 1786 Slezské Rudoltice (Rosswald) in Bohemian Silesia; † 1833).

Hans Schomburgk (* 1880; † 1967).

Michael Schön (* 1903 Weisbaden; † 1960 Munich).

Johann Philipp von Schönborn (* 1605; † 1673). Johann Schöner (* 1477 Karlstadt am Main; † 1547 Nurnberg).

Arthur Moritz Schoenflies (* 17 April 1853 Landsberg (Gorzów) in western Poland; † 1928).

Janez Ludvik Schönleben (Johan, * 11 November 1618, Ljubljana; SJ 26 October 1635 Vienna–1654 Vienna; † 1681).

Adam Adolph Schöpfflein (* 1704; † 1753 Wurzburg?) military architect in Wurzburg.

Joop Schopman after many years at the University of Utrecht (Fakulteit der Wijsbegeerte, Rijksuniversiteit te Utrecht) became a visiting professor at the University of Innsbruck, Austria in 1991 as well as at Boston College, USA to research the history and philosophy of science with artificial intelligence (AI) included.

Kaspar Schott (Gaspar, * 1608; † 1666).

Walter Schottky (* 1886; † 1976).

Gregor Schöttl (Gregorius Christianus Dominicus Schödtel, * 14 February 1732 Steyr; SJ 28 October 1739; † 4/5 November 1777 Ljubljana).

Janez Baptist Schöttl (Joannes Baptista Joannes Nepomucenus Sebastianus Schödl, * 23 June 1724 Steyr; SJ; † 1777), Gregor’s older brother.

Ivan Schrabas (Hans Schrabass, Janez Schrawass), the vassal of the Counts of Celje mentioned from 30 September 1425 to 1441. Herman II granted him the feudal estates in Kostel, Krško, Trebanj and Ribnica parishes (ARS, SI_AS 1073/I-57r, folio 72'; StLA, HStAC Lordship and town of Cilli (Celje), box (Karton) 3, booklet (Heft) 15, Feudal Book for the Counties of Ortenburg and Celje 1436–1441 folios 47–48', 76; ARS, SI_AS 1063, reference number 4496, folio 3 (issued about the year 1440).

Johan Gottlieb Friedrich Schrader (* 1763 Salzdahlum by Wolfenbüttel; † 1832/1833 Sankt Petersburg?).

Heinrich Schramm (Hinko Schram, * 1837 Schönbrunn) began to teach at Rijeka Naval and Military Academy established on November 3, 1857. On 1 September 1860 he was promoted to full professorship. On 24 August 1863 Schramm and Sekulić became full professors at later Tesla's Real High School in Rakovac. In 1864 Schramm taught mathematics in High Real School in Wiener Neustadt. From 1868 to 1874 Schramm as a director there attracted one of his best students Rudolf Steiner. Schramm served as District School Inspector (Bezirks-Schulinspector) already in 1872 which became his profession serving the Viennese government in 1875-1886. Firstly, he was a Viennese based School Inspector (Schulinspector) for Lower Austrian real and trade school together with Joseph Krist in 1876 and later with Mathias Wretschko, serving the Ministry of Commerce (Handels Ministerium). Later he held the same job at Ministerium für Kultus und Unterricht (Ministry of Education and Worship) together with Adalbert knight Kunzek-Lichton (Izvešće Rakovac 1884, 22; Vuković, Valent, 2016, 92; *Hof- und Staat*…, Wien, 1876: 301, 309; 1878: 30, 318; 1881: 106, 124, 125; 1885: 84; 1886: 86; 1887: 88).

Johann Christian Daniel Schreiber (* 1739; † 1810).

Henrik Schreiner (* 1850 Ljutomer; † 1920 Maribor).

Ignatio Schreiner (* 1703 Vienna; SJ; † 1777 Vienna).

Johann Schreck (Terence, Terrentius, * 1576 Constance; SJ; † 1630 Beijing).

Wilhelm von Schröder (* 1640 Prešov in Slovakia; † 1688).

Erwin Schrödinger (* 1887; † 1961).

Karl Julius Schröer (* 1825 Bratislava; † 1900 Vienna).

Anton Schröter von Kristelli (* 1802; † 1875).

Fritz Georg Ernst Schröter (* 1886 Berlin; † 1973 Ulm).

Hugo Schrötter (Johann Karl, * 1856 Olomuc; † 1911 Graz).
Franc Schubert (* 1797; † 1828).

Helmut Schubert works at *Deutsches Museum* in Munich.

Johann Sigmund Schuckert (* 1846 Nuremberg; † 1895 Wiesbaden).

Hermann Schuler (Schüler, * 1894 Posen; † 1964 Göttingen).

Günter Victor Schulz (* 1905 Łódź; † 1999).

Johannes Schulz (* 1739).

Franz Leopold Schulz Edler von Strassnitzki (* 1835).

Friderik Schulz Edler von Strassnitzki.

Johann Nepomuk Paul Friedrich Schulz Edler von Strassnitzki (* 6 July 1831 Ljubljana).

Leopold Karl Schulz Edler von Strassnitzki (Straszinski, Strasznicki, Straßnitzki, * 31 March 1803 Krakow; † 9 June 1852 Bad Vöslau near Vienna).

Natalie baroness Grimbschitz married Schulz Edler von Strassnitzki (* 1845).

Sophia Selinger married Schulz Edler von Strassnitzki (Sofie Seeliger, Zeillinger, Zeilinger, Seliger).

Heinrich Christian Schumacher (* 1780 Bad Bramstedt in Holstein; † 1850 Altona in west Hamburg)

Winfried Otto Schumann (* 1888 Tubingen; † 1974 Munich).

Arthur Schuster (* 1851; † 1934).

George I. Schwartz published in 1958-1968.

Heinrich Schwarz (Karl Leonhard, * 1824 Eisleben in Prussia; † 1890 Eberswalde in Prussia).

August Schwarzer (Schwartzer, * 1833) taught at first German Higher real school in Prague in 1859, and in Tabor 100 km south of Prague in 1871.

Silvan Samuel Schweber (Sam, * 1928 Strasbourg; † 2017 Lexington, Massachusetts) a French-born American theoretical physicist and science historian who was a professor at the newly founded Brandeis University from 1955.

Johannes Baptist Schwelmer (* 1728 Banska (Banská) Bystrica; † 1775).

Daniel Schwenter (* 1585 Nuremberg; † 19 January 1636 Altdorf).

Julian Schwinger (* 1918; † 1994).

Anton Maria Schyrl (Rheita, * 1597/1604 Reutte in Tyrol; OFMCap; † 14 November 1660).

Angelo Scocchi flourished 1900-1952 as a professor in Trieste.

Janez Anton Scopoli (Giuseppe Antonio, * 1723; † 1788).

John Duns Scotus (* about 1266 Duns; OFM; † 1308 Cologne (Köln).

Michael Scotus (* 1175; † 1232).

Pietro Angelo Secchi (* 1818; SJ; † 1878).

Thomas Johann Seebeck (* 1770; † 1831).

Igor Sega works at Faculty of Mathematics and Physics, University of Ljubljana.

János András Segner (Johann Andreas Zegner, * 1704, Bratislava; † 1777).

Emilio Segré (Dino, * 1905 Rome; † 1989 California).

Marc Séguin (* 1786 Annonay; † 1875 Annonay).

Franz Sehr (* 1834 Frankstadt in Moravia).

Konrad Seidl (* 1830; † 1879).
Gotthard Seifert (* 1953 Grünhain, Saxony) worked at department of theoretical physics of University Paderborn (Theoretische Physik, Universität Paderborn) in 1998, later became a professor of theoretical chemistry (Theoretische Chemie) at TU Dresden.

Herbert Seifert (* 1945), received his PhD from the University of Vienna with a dissertation on Giovanni Buonaventura Viviani. He is now professor emeritus of musicology at Viennese university.

Frederick Seitz (* 1911 San Francisco; † 2008).

Martin Sekulić (Мартин Секулић, * 29 September 1833, Sankt Michael (Sv. Mihovil), today Lovinac in Lika; † 14 April 1905 Zagreb, buried at Roman Catholic part of Zagreb Mirogoj cemetery).

Martin’s son general of artillery Rudolf von Sekulić (* 1860 Pest; † 10 October 1917 Bukovina).

Martin’s son forester Vladko Sekulić (* 1865 Karlovac; † 1890 Karlovac).

Matija Seliger (* 21 January 1925 Vrhnika).

Janez Seliger (* 1949).

Nikolay Nikolaevich Semenov (* 1896; † 1986).

Andreas Semery (* 1630 Riems; SJ 1652 Rome; † 1717 Rome).

Marjorie Lee Senechal (née Wikler, * 1939 Saint Louis, Missouri).

Marjan Senegačnik (* 1928; † 2002).

Andrej Senekovič (* 1848; † 1926).

Daniel Sennert (* 1572 Wroclaw; † July 21, 1637).

Wolferd Senguerd (Wolfgang Senkward, Senguerolus, * 1646; † 1724).

Janko Sernec (* 1834; † 1909).

Thomæ Le Seur (Leseur, * 1703 Rethel; OM; † 1770 Rome).

Vitaly Dmitrievich Shafranov (Виталий Дмитриевич Шафранов, * 1929 small village Morvinovo 100 km east of Moscow; † 2014 Moscow).

Shao Kang (少康, his surname was Sì 姒) sixth king of the Xia dynasty ruling ancient China in 2118-2097 B.C.

John Bennett Shank teaches history at University of Minnesota in Morris.

Trevor Royle Shaw (* 1928 UK) if Karst Research Institute in Postojna.

Edward Clarence Shepard (Shephard, † after 1862), English patent agent and inventor based on Duke Street Westminster-London in 1850s, later in 1861 based on Victoria street in Westminster, working on Floris Nollet's behalf in England and France.

Robert Sherwood Shankland (* 1908 Ohio; † 1982 Cleveland Ohio).

Osamu Shimomura (* 1928 Kyoto; † 2018, Nagasaki).

John Northrup Shive (* 1913 Baltimore; † 1984).

Shizuki Tadao (志 筑 忠雄, Chūhirō Nakano, Ryūho, * 1760 Nagasaki; † 1806).

William Bradford Shockley (* 1910; † 1989).

Franciszek Ksaver Shopfer (Schoepfer, * 1761; † 1808).

Dongfang Shuo (東方朔, * c. 160 BCE; † c. 93 BCE).

Thaddäus Siber (* 1774 Schrobenhausen in Bavaria; † 1854 Munich).

Ignatius Sichelbart (Ignaz Sickelbart, Sickelpart. 艾啓蒙 / 艾启蒙, Ài Qǐměng, Ai Ch'i-meng, * 1708 Nejdek (Neudeuk. Neudeck, Nedejk) in west Bohemian Sudetenland; SJ; † 1780 Beijing).

Willem Van Sichen (Guillaume, * 1632; OFM; † 1691 Leuven?).

Theodor Sidot (Théodore) preparator of chemical experiments at Lycée Charlemagne in Paris at least in 1866-1883.

Philipp Franz Balthazar von Siebold (* 1796 Wurzburg; † 1866 Munich).

Ernst Werner Siemens (* 1816; † 1892).

Wilhelm von Siemens (* 1855; † 1919).

sir William Siemens (Charles, * 1823; † 1883).

Alexander Siemens (* 1847 Hanover; † 1928).

Adolf Ferdinand Sieverts (* 1874).

Oskar Simony (* 1852 Vienna; † 1915 Vienna), Stefan's Viennese student in 1872, substitute teacher at the Viennese Academy of Commerce 1873, assistant professor of higher mathematics and theoretical mechanics at the Forestry School in Mariabrun in 1874, private assistant of mathematics at the University of Vienna in 1874, professor at the Bodencultur College in 1878, retired in 1913.

Peter Sigmund (* 1936 Karlsruhe).

Ruth Lewin Sime (* 2 July 1939 USA).

Saint Simon of Lipnica Murowana by Krakow in Silesia (Szimon a Lypnica, * abt. 1437; OFM; † 1482).

William Speirs Simpson (* 1845; † 1917) of the Simpson Lever Chain Co. He attended Glasgow University to become a Londoner specialist in metallurgy as inventor of armour-plating ships with fusion-welding.

baron Simon Georg Sina (* 1810; † 1876).

Liborio Siniscalchi (* 1674; † 1743).

Ida Mathilda Valeria Rosina Kanitz married Sirk (* 1852 Vienna).

Hugo Victor Carl Sirk (* 11 March 1881 Graz Heilige Blut; † 15 December 1959 Vienna).

Mathia Sirk (* 1809 Kamna gora east of Trebnje; † 1892 Graz).

Victor H. Sirk (* 1845).

Janez Siser (* 1 July 1608; † 1636).

Sigismund Siser (Siserius, Siserus, * 1 May 1636, Klagenfurt; SJ 7 October 1653, Leoben; † 29 December 1693 Vienna).

Sandi Sitar (* 1937 Ljubljana).

Franciscus Sitius (Sizzi, * Firenze; † 1618 Paris).

Hans Leo Sittauer (Johannes Sittauer, * 1911 Lhotě by Stříbro (Elhotten by Mies) in Bohemia; † 1998 Altenberg in Thüringen), also a poet.

Stanisław of Skarbimierz (Stanislaus de Scarbimiria, * 1360; † 1431).

Zdenko Hans Skraup (* 1850 Prague; † 1910 Vienna).

Adolf Carl Heinrich Slaby (* 1849 Berlin; † 1913 Charlottenburg).

Jurij Sladkonja (* 21 March 1456 Ljubljana; † 26 April 1522).

John Slater (* 1900; † 1976).

Joseph Slepian (* 1891 Boston; † 1969).

Josip Slišković (* 1901 Mostar; † 1984 Vienna).

Olexander Smakula (Олександр Теодорович Смакула, Александр Теодорович Смакула, * 1900 Dobrovody, Austria–Hungary, today Ukraine; † 1983 Auburn, Massachusetts, USA), Pohl's PhD student and assistant in Göttingen, after 1834 worked for Carl Zeiss AG in Jena.

John Smeaton (* 1724 Leeds; † 1794).

Adolf Gustav Stephan Smekal (* 1895; † 1959).

Franjo Smerdu (* 1905 Graz; † 1989).

Robert Smith (* 1689; † 1768).

Willoughby Smith (* 1828; † 1891).

Marian von Smolan Smoluchowski (* 1872; † 1917).

Louis Dijour Smullin (Lou, * 1916, Detroit, Michigan, United States; † 2009, Newton, Massachusetts, United States) of Radiation Laboratory at Massachusetts Institute of Technology.

Charles Percy baron Snow (of the City of Leicester, * 1905; † 1980).

Joannes de Monte Snyders (Snyder, * about 1625; † 1670).

king Jan III Sobieski (John, * 1629; † 1696).

Frederick Soddy (* 1877; † 1956).

Riemon Soga (* 1572; † 1636).

Alan David Sokal (* 1955 Boston, Massachusetts).

Franc Sokol (Sokoll, * 1779 Sadská in the Central Bohemian Region; † 1822 Ljubljana).

Velimir Sokol published on history of telegraph and telephone in 1964-1981.

Jury Ivanovič Solovjev (Yuri Ivanovich Solovyov, Ю́рий Ива́нович Соловьёв (* 1924 Krasnoyarsk (Красноярск) in Siberia).

Ernest Solvay (* 1838; † 1922).

Kelallur Nilakantha Somayaji (Keḷallur, Comatiri, * 1444; † 1544).

Edward Somerset, 2nd Marquess of Worcester (* 1602/1603; † 1667).

Arnold Sommerfeld (* 1868; † 1951).

baron Joseph Sonnenfels (* 1733; † 1817).

Étienne Souciet (* 1671; SJ; † 1744).

Robert John Soulen Junior (Bob, * 1940 Phoenixville, PA; † 2015), head of the Superconducting materials section at the Naval Research Laboratory in Washington DC.

Polycarpe de Souza (Sou Tche-Neng Joei-Kong, * 1697 Coimbra; SJ 1712 Portugal; † 1757 Peking).

Lazzaro Spallanzani (* 12 January 1729 Scandiano by Modena; † 11 February 1799 Pavia).

James M. Spangler (* 1848 Pennsylvania; † 1915 Chicago).

Morgan Sparks (* July 6, 1916 Pagosa Springs, Colorado; † May 3, 2008 Fullerton, California).

Johannes Sperlette (* 1661 Mouzon in Champagne; † 5 February 1725 Halle).

Marcus Johannes Sparnaay (* 1923 Amersfoort, Netherlands; † 2015).

Robert Spiller († abt. 1913 Maribor).

Franciscus Xavier Spindler (* 1726 Graz; † 1775 Graz).

Ignatz Spiro (* 1817; † 1894).

Lyman Spitzer (* 1919; † 1997).

Hermann Johann Philipp Sprengel (* 1834; † 1906).

Franz Seraph Stadium count Warthausen (* 1806; † June 8, 1856).

Ernst Karl Stadler von Wolffersgrün (ŠtodIárove z Wolfersgrýna, * 21 December 1871 Terezín (Theresienstadt) in northern Bohemia), acquired PhD in jurisprudence, married to Codelli in Ljubljana on 21 November 1897.

József Ferenz Staehling (Josef Franz Stähling, * 1743) physician in Bratislava.

George Ernst Stahl (* 1660 Jena; † 1734 Berlin).

Josef Staininger (Steininger, Stainninger, * 1700 Vienna; SJ 1715; † 1766 Vienna).

William Edwards Staite (* 1809 Bristol; † 1854 Caen in France).

Petar Stambolić (* 1912; † 2007).

Pietro Stancovich (Petar Stanković, * 1771 Barban in Istria; † 1852 Barban).

William Stanley (* 1858 Brooklin; † 1916).

Valentin Stansel (Estancel, * 1621 Olomouc; † 18 December 1705 Salvador Bahia in Brazil).

Fabri Stapulensis (Jacques Lefevre, * 1450? Étaples in Picardy; † 1536).

Ante Starčević (* 1823 Veliki Žitnik near Gospić; † 1896).

Franz Xaver Stark von Rungberg (* 1840 Prague; † 1914).

Johannes Stark (* 1874; † 1957).

Olga Andreevna Staroseljskaja-Nikitina (Ol'ga Andreevna Starosel'skaja married Nikitina, Ольга Андреевна Старосельская-Никитина, * 1885 Kremenchuk (Kremenchug, Кременчуг, Кременчук) in central Ukraine; † 1969).

John Wellington Starr (* 1821/22 Cincinnati, Ohio; † 1846 Birmingham, UK).

Katharina Startniek (Katherine, * 9 August 1822 Ferlach no. 56 vulgo Umniggin).

Simon Startinigg (* 11 January 1820 Rossenegg no. 2 in parish Ebenthal).

Joseph Startinik (* 1771; † 1848 Ferlach no 42).

Jean Servais Stas (* 1813; † 1891).

Giovanni Giacomo Staserio (* 1565; † 1635).

Albert Jan Staverman (* 1912 Bussum; † 1993).

Charles Henry Stearn (* 1844 Jamaica; † 1919).

Ernst Steckelmacher (* 1881 Mannheim; † 1943 Majdanek).

Walter Steckelmacher (* 1922 Mannheim; † 2006 Crawley in West Sussex).

Sir Richard Steele (* 1672 Dublin; † 1729 Wales).

Max Steenbeck (* 1904 Kiel; † 1985 East Berlin)

Aleš (Alexius) Stefan (* 16 July 1805 Lancova-Lanzendorf no. 5 Škocjan pri Podjuni (Sankt Kanzian am Klopeiner See in Jauntal); † 8 December 1872 Klagenfurt Stadt no. 370).

Jožef Stefan (Josef, * 1835; † 1893).

Maria widow of Adolf Neumann remarried Stefan (Maria Karoline, * 1839 Friesach in Carinthia?; † 2 September 1929 Vienna).

Karl-Heinz Steigerwald (* 1920 Koblenz; † 2001).

Franc Anton von Steinberg (Stemberg, * 1684 castle Kalec by Zagorje and Pivka in Karst; † 1765 Ljubljana)

Friedrich August Steiner (* 1840 Linz by Danube; † 1901 Prague), from 1878 the professor of engineering and graduated diploma engineer in German Polytechnic (*Technische Hochschule*) in Prague, published on photography and bridges in 1878-1909.

Jacob Steiner (* 1796; † 1863).

Rudolf Steiner (* 1861 Kraljevec (Königreich, Murakirály) in Međumurje part od north Croatia; † 1925 Dornach, Switzerland) reformer, architect, and clairvoyant as leader of spiritual research, esotericism, and theosophical movements.

Charles Proteus Steinmetz (Karl, * 1865 Breslau (today's Wroclaw); † 1923).

Wolf Balthasar Adolf von Steinwehr (Steinwähr, * 1704 Dziedzice (Deetz) by Barlinek (Berlinchen) in Powiat Myśliborski (Powiat Soldau) of western Poland; † 1771 Frankfurt (Oder)).

Karl Stejskal (Karel) obtained PhD to become a professor of languages at Grammar Schools initially in Moravian Olomouc in 1870 and in Znaim (Znojmo) in 1880. In Bohemia and Vienna edited anthologies on statistics of Habsburgian High schools in 1870-1924.

Ivan Steklasa (* 1846; † 1921).

Heinrich von Stephan (* 1831; † 1897).

Mihael Stephan (* 29 September 1802 Lancova no 5 Škocjan pri Podjuni (Lanzendorf Sankt Kanzian am Klopeiner See in Jauntal)).

Richard Montgomery Stephenson (* 1917) taught at the College of Engineering of New York University.

Caspar Maria Sternberg (* 1761; † 1838).

Franz Josef Sternberg-Manderscheid (František Josef, count, *1763 Prague; † 1830 Prague).

Joachim Count Sternberg (* 1754/5, Prague; † 1808).

Robert Sterneck (* 1871; † 1928).

Walter Steubing (Friedrich Wilhelm, * 1885 Dillenburg; † 1965 Hamburg), Stark's graduate habilitation student in RWTH Aachen in 1908-1909.

Simon Stevin (* 1548; † 1620).

Balfour Stewart (* 1828; † 1887).

Andreas Josef baron Stifft (* 1760-Röschitz in Lower Austria; † 1836 Vienna).

Wolfgang Stiller (* 1940).

Anton Stimmelmayer (Stimmelmayr, * 1884 Dingolfing in Lower Bavaria; † 1963).

Jan Stobner (* 1360; † 1405).

George Gabriel Stokes (* 1819 County Sligo in Ireland; † 1903).

Joseph Stöcklein (* 1676; SJ; † 1733 Graz).
John Stone (* 1869 Virginia; † 1943 San Diego).

Georg Johnston Stoney (* 1826; † 1911).

Carl Störmer (* 1874; † 1957).

Jakob Strauss (* 1533 Ljubljana; † 28 June 1590 Celje).

Siegmund Strauß (Strauss, * 1875 Znojmo in Moravia; † 1942 New York), because of his Jewish origin emigrated from Vienna to London in 1938.

Franz Streinz (* 1855; † 1922).

Karl Edler von Stremayr (* 1823 Graz; † 1904).

Anton Strnad (Strnadt, * 1746; † 1799).

Janez Strnad (* 1934 Ljubljana; † 2015).

Aleš Strojnik (* 1921 Ljubljana; † 6 November 1995 Arizona).

Hinko Henry Stroke (* abt. 1928), Ph.D. Massachusetts Institute of Technology in 1955, professor of physics at New York University.

John Donovan Strong (* 1905 Lawrence, Kansas; † 1992 Amherst).

Vincenc Jurij Strupi (baron Vinko Struppi, Vincent Georg, * 1733 Trieste or Carniola proper; † 3 June 1810 Bürgerspitale no. 1166 in Vienna) Hofbaudirektor (court director of building) and Generalfeldwachtmeister (master general of field guards) and counsellor (Rath) at the Viennese Academy of visual arts (Akademie der bildenden Künste) in 1808 residing in Bürgerspitale no. 1166 (*Hof- und Staat*…, Wien, 1808: 4, 19, 59, 237, 705; Book of Funerals (Sterbebuch) St. Augustin in Vienna 03-04,5 page 65).

Ahacij Stržinar (* 1676; † 1741).

Charles II Stuart (* 1630; king; † 1685).

Herbert Arthur Stuart (* 1899; † 1974).
Johann Wilhelm Count Stubenberg (* 1619 Neustadt along the Mettau River in the east of the Bohemian Lands; † 24 April 1663 Kitsel in Hungary or 15 March 1663 Vienna).

Countess Marie Margarethe Stubenberg (* 1694 Graz; † 28 May 1724).

Andrej Studen (* Celje), professor of social history at the Philosophical Faculty of Ljubljana University.

Luca Stulli (Luka, * 1772; † 1828).

Bernard-Kilian Stumpf (* 1655 Wurzburg; † 1720 Beijing).

Carl Stumpf (* 1848; † 1936).

Johann Christoph Sturm (Sturmius, * 1635 Hilpoltstein (Mittelfranken); † 1703 Altdorf).

Peter Andrew Sturrock (* 1924 Stifford in Essex).

Johann Georg Stuwer (Stubenrauch, * 1732 Oberliezheim in Swabia; † 1804 Vienna).

Georg Adolf Suckow (* 1751; † 1813).

Eduard Suess (* 1831; † 1914).

Anton Suhadolc (* 1935 Ljubljana), professor of mathematics at Ljubljana University.

Masatomo Sumitomo (住友 政 友, * 1585 Fakui north of Kyoto; † 1652), brother-in-law of Riemon Soga.

Tomomochi Sumitomo (Riemon, * 1607; † 1662), son of Riemon Soga and adopted son of Masatomo Sumitomo.

Kichizaemon VI Sumitomo Tomoito (住友吉左衛門, * 1865; † 1926).

Sey-Shing Sun, in 1989-2001 patented for at Planar Systems Inc., 1400 NW Compton Drive, Beaverton, OR 97006 formed in 1983 as a spinoff from Tektronix, in 2003-2006 for LSI Logic Corporation based in San Jose, California.

Richard T. Tuenge (* 1948) of Hillsboro, Oregon, in 1994-2012 at Planar Systems Inc., 1400 NW Compton Drive, Beaverton, Oregon 97006 1994

Ivan Supek (* 1915 Zagreb; † 2007 Zagreb).

Antonino Lo Surdo (* 1880 Syracuse; † 1949 Rome).

Charles Susskind (* 1921 Prague; † 2004 Berkeley), the Jewish professor emeritus of electrical engineering and a co-founder of bioengineering studies at the University of California.

Ivan Sušnik (* 1854 Škofja Loka; † 1942 Ljubljana).

William Sutherland (* 1859 Glasgow; † 1912 Melbourne)

Franc Svetic (Frančišek Suetiz, * 1749 Kamnik).

Ivan Svetina (1851 Breznica in the municipality of Žirovnica-1936 Žirovnica).

Saša Svetina (* 1935 Celje).

Venczel Svoboda (Vaclav, Wenzl, Wenzel Swoboda), member of Bohemian Museum (böhmischen Museums) and Association for natural history in Bratislava (Vereins für Naturkunde in Preßburg), the director and professor of Greek and Latin languages like Tuschar at Bratislava (Gymnasiums zu Preßburg) from October 1853 until February 1861, also geography as director appointed on 25 February 1854. Later the Bohemian state school counsellor (Landes-Schul-Rath) in 1866 as director of Communal Real Ober Gymnasium in Deutsch-Brod by Kuttenberg (Havlíčkův Brod, until 1945 Německý Brod by Kutná Hora) where he still taught in 1884 (*Hof- und Staat*…, Wien, 1866: 380, 1874: 447, 455, 464; 1882: 348; 1884: 369)

Sonja Svoljšak, head curator of Manuscript, Rare and Old Prints Collection at NUK.

Elizabeth Swan married Mawson (1822 Penrith - 1905)

Joseph Wilson Swan (* 1828 Pallion in Sunderland; † 1914 Warlingham).

Franz Seraphin Anton Swaty (* 1826 Bruck an der Leitha in Lower Austria; † 1888 Vienna).

Franz Xaver Alois Swaty (* 1855 Vienna; † 1907 Maribor).

Franziska Maria Wenedikter married Swaty, remarried Bayer (Fanny, * 1863; † 1941 Maribor).

Emanuel Swedenborg (Emmanuel Svedenborg, * 1688 Stockholm; † 1772 London).

Gerhard van Swieten (* 1700; † 1772).

Gottfried Baron van Swieten (* 29 October 1733 Leiden; † 29 March 1803 Vienna).

John Swift of BBC London was a journalist who under the pseudonym ‘The Scanner’ wrote news and gossip futuristic items in the TV edition of the Radio Times television diary in 1949.

Jonathan Swift (* 1667 Dublin; † 1745 Dublin).

John A. Campbell (* 1942) of Physics Department University of Canterbury, Christchurch, New Zealand.

Alban Archibald Campbell Swinton (* 1863; † 1930).

Jan Szczepanik (* 1872 Rudniki (Rudnyky, Рудники) in Habsburgian monarchy, now in Ukraine just on the other side of the border from Polish Przemyśł, † 1926 Tarnów in southeastern Poland (Lesser Poland)).

Ferenc Count Széchényi (* 1754 Fertöszéplak; † 1820 Vienna).

Angelika Szekely de Doba (Maria Josefa Székely, * 1891 Olomouc; † 1979 Graz).

Leo Szilard (* 1898; † 1964).

Kálmán von Nagy Szigeth Szily (Coloman Nagyszigeth, Nagy-Szigeth, * 1838 Izsák in central Hungary; † 1924 Budapest).

Š

Kristina Šamperl Purg (* 1950 Spuhlja east of Ptuj; † 2002 Ptuj).

Anton Šantel (* 1845; † 1920).

Josip Šašel (Wieser, * 1883 Windisch-Bleiberg; † 1961 Municipality of Prevalje).

Jakob Šašel (Schaschel, * 1832 Kappel (Kapla pri Borovljah) ; † 1902 Karlovac).

Jakob Šašel (* 13 April 1862 Karlovac; † 1911 Mahićno suburb village by Karlovac).

Jožef Marija Šemerl (Schemerl, Schemmerl, * 1754; † 1844).

Marjeta Šentjurc (* 1940 Hrastnik).

Lidija Šentjurc (* 1911 Hrastnik; † 2000 Ljubljana).

Marija Šešić (Шешић, * 1952; † 2006 Beograd).

Тара́с Григо́рович Шевче́нко (Ševčenko, Taras Hryhorovych Shevchenko, * 1814; † 1861).

Amalija Šimec (* 1893 Tržič; † 1960 Ljubljana).

Jan Šindel (Jan Ondřejův, Iohannes Andreae dictus Schindel, Joannes de Prague, * about 1370 Hradec Králové; † 1455/1457).

Lucijan Šinkovec (* 2 June 1914 Laze by Logatec; † 1966 Ethiopia).

Žiga Škerpin (* 1689 Kamnik; OFM 1703 Nazarje in Styria; † 1755 Ljubljana).

Jožef Škoda (* 1805; † 1881).

Ciril Šlebinger (Schlebinger, * 1907; † 2000).

Janko Šlebinger (* 1876; † 1951), director of NUK.

Vladimir Šlebinger (* 1906; † 1984).

Maja Ilich married Gombač, daughter of Iztok Ilich, granddaughter of Zorka Šlebinger.

Jože Šorn (* 1921 Ljubljana; † 1982).

Ivan Štrkljević (Johan Strkljević, Јохан Штркљевић, † 4 May 1896 Vinkovci).

Dragutin Ljudevit Šoštarić (* 1861 Rijeka; † 1890).

Sigismund Šoštarić von Letovanićki (Šišman) director of Rakovac Real School from 1868.

Miran Špelič (* 1963 Ljubljana; OFM).

Franc Šturm (Sturm, * 1881 Donja Košana; † March 31, 1944).

Ivan Šubic (* 1856; † 1924).

Simon Šubic (Schubitz, Subić, Subič, * 28th of October 1830 Brodeh number 13 in Poljanska dolina near Škofja Loka (Brod bei Lack); † 27 July 1903 Graz).

Antun von Šufflay (Šuflaj, * 1775 Samobor; † 1849).

Fran Šuklje (* 1849 Ljubljana; † 1935 castle Kamen in Kandija by Novo mesto).

Milan Šuklje (* 1881 Wiener Neustadt; † 1937 Golnik).

Rasto Švajgar (Schweiger, * 1919 Ribnica; † 2001 Nova Gorica).

T

Charles Symner Tainter (* 1854; † 1940 San Diego).

Peter Guthrie Tait (* 1831; † 1901 Edinburgh).

Takehara Shunchōsai (竹 原 春 朝 斉, † 1800).

Taqi al-Din Muhammad ibn Ma'ruf ash-Shami al-Asadi (تقي الدين محمد بن معروف الشامي, Takiyüddin, Taki, * 1526 Damascus; † 1585 Istanbul).

William Henry Fox Talbot (* 1800; † 1877).

Igor 'Evgenevich Tamm (* 1895; † 1971).

Joachim Tancke (Tancky, * 1557/1559 Perleberg in Brandenburg; † 1609 Leipzig).

Ching Wan Tang (鄧青雲, Dèng Qīngyún, * 1947 Hong Kong).

Laurentius Tapolcsányi (Lörinc, Vavrinec Tapolčáni, Topoľčanský, * 1669 Ružindol (Rózsavölgy, Rosindol, Rosenthal) 10 km east of Trnava; SJ 1690 Vienna; † 1729 Trnava).

Boris Nikolaevič Tarasov (Nikolaevich, Бори́с Никола́евич Тара́сов, * 1947 Vladivostok (Владивосток)).

Lev Vasil′evich Tarasov (Лев Васильевич Тарасов, Тара́сов, * 1934) graduated from the Moscow Engineering Physics Institute in 1958 with a degree in Theoretical Nuclear Physics. In 1989-1992 headed the Department of the methodology of teaching the natural history and mathematical topics at the Moscow Institute for Advanced Studies of Educators. In 1992-1998 headed the Department of Physics at Moscow Open State Pedagogical University where he developed a new educational technology, ecology and dialectics as the scientific guidance of a pedagogical experiment on the practical implementation of technology.

Niccolo Fontana called Tartaglia (* 1499; † 1557).

Peter Tartareti of Romont (Tatareti, Pierre Tartaret, * c. 1460 Romont in Canton de Fribourg in the diocese of Lausanne in Switzerland; † (1494)/1522 Paris).

Girolamo Tartarotti (Hieronymous, * 1706 Rovereto by Trento (Trent); † 1761).

Giuseppe Tartini (* 1692 Piran; † 26 February 1770 Padua).

Tarvisini (Giacomo Placentini, * 1672; † 1762).

Alessandro Tassoni (* 1565 Modena; † 1635).

Innocent baron Taufferer (Inocenc, * 1 January 1722 Turn by Višnja Gora (castle); SJ 28 October 1738 Vienna; † 14 January 1794 Ljubljana).

Jurij Jožef Dizma Taufferer (Franc Ksaver, * 22 March 1733 Turn by Višnja Gora; † 1789 Ljubljana).

Eduard Taussig, in 1889-1893 worked as a metallurgist at Bahrenfeld in Holstein, now the western quarter of Hamburg. Related to Prague based Jewish family Taussig.

Štefan Tausig (Taussig) the first director of Central Technical Library in Ljubljana (CTK) in 1950–1951, the first director of Ljubljana Trubar's Antiquarian Bookshop up to his retirement in 1969.

Janko Tavzes (* 1893 Idrija; † 1959 Ljubljana).

Brooke Taylor (* 18 August 1685 Edmonton Middlesex; † 29 December 1731 house Somerset in London).

Geoffrey Ingram Taylor (* 1886 London; † 1975 Cambridge).

Richard Taylor (* 1781; † 1858).

Gordon Kidd Teal (* 1907 Dallas; † 2003 Dallas).

Frederik II of Teck a son of Hermann I von Teck (* 1260; † 1314).

Frederik IV Duke of Teck's father Frederik III of Teck (Frederick, Friedrich, * 1325; † 28 September 1390).

Frederik IV Duke of Teck (Frederick, Friedrich, † 4 August 1411).

Frederik IV Duke of Teck's sister Margaret Teck in 1397 married countess Ortenburg († 1422).

Frederik III of Teck's father Ludwig III von Teck († 28 January 1334).

Margaret's brother Ulrich duke of Teck († 7 August 1432).

Albrecht Wenzel von Tegetthoff (* 1841 Graz; † July 22, 1871).

vice-admiral Wilhelm von Tegetthoff (* December 23, 1827 Maribor; † 7 April 1871).

Hermann Friedrich Teichmeyer (* 1685; † 1746).

Temistius (Themis, Themistus, Themistius, * 317 Paphlagonia in central Anatolia; † 388 Constantinople).

Richard H. Templer, Department of Chemistry, Imperial College, London.

Louis Jacques Tenar (* 1777; † 1857).

Reshef Tenne (* 1944 kibbutz Usha in the western Galilee), Department of Materials and Interfaces, Weizmann Institute, Rehovot, Israel.

Wilhelm Ernst Tentzel (* 1659 Greußen an der Helbe; † 1707 Dresden).

Robert Kyle Grenville Temple (* 1945 USA).

Grigory Nikolaevich Teplov (Григорий Николаевич Теплов, * 1717; † 1779).

Filip Terpin (Trpin, * 1603/1604 Selca above Škofja Loka; † 23 June 1683 Šmartno by Cerklje by Kranj (pri Kranju)).

Blaž Terpinc (Terpinz, * 1759 Bled; † 1836 Kranj).

Fidelis Terpinc (* 1799; † 1875).

Milutin Tesla (* 1819 Raduč; † 1879 Gospić).

Nikola Tesla (* 1856; † 1943).

Gilles Thébault (* 1703; † 1766).

Richard Theile (* 1913 Halle (Saale); † 1974 Amrum) researched image recording tubes with photosensitive semiconductor layers at the laboratory for physical research at Telefunken, headed by Fritz Schröter. Under Theile's leadership iconoscope-type image tubes were developed in addition to photomultipliers.

Jean Thibaud (* 1901; † 1960).

Nicolas Thillaye (* 1709 near Lizieux; † 1784 Rouen).

Noël-Vincent Thillaye (Nicolas, * 1749 Rouen; † 1802 Val de la Haie).

Jacques-François-René Thillaye (* 1750; † 1791), a botanist.

Jean-Baptiste-Jacques Thillaye (* 1752; † 1822), a physician anatomist-surgeon.

Hans Thirring (* 1888; † 1976).

Henrik Evald Tholander (Thålander, * 1847 Stockholm; † 1910 Stockholm).

Johann Thölde of Hesse (* 1565; † 1624).

Thomas of York (OFM; † 1268/69).

Émile Thomas (* 2 April 1907 Brussels; † 14 January 2001).

Peter Jørgen Julius Thomsen (* 1826; † 1909).

Elihu Thomson (* 1853; † 1937).

George Paget Thomson (* 1892; † 1975).

Joseph John Thomson (* 1856; † 1940).

Lynn Thorndike (* 1856 Lynn, Massachusetts, USA; † 1940 New York City).

Richard Threlfall (* 1861; † 1932).

John S. Thurman, invented vacuum cleaners in St. Louis, Missouri in 1898 and 1899. His descendant John S. Thurman (* 1908 St. Louis, Missouri) also worked for General Compressed Air Company, New York.

Jean-François Tremblay was a Hong Kong business reporter-contractor from October 1995 until September 2019; then he became a Public Relations Specialist of Huawei at Shenzhen, Guangdong, China.

count Johann Tserclaes Tilly (* 1559; † 1632).

Arkadij Klimentovič Timirjazev (Аркадий Климентович Тимирязев, * 1880; † 1955), the son of K.A. Timirjazev. Arkadij studied physics with P. N. Lebedev. In 1909–1911 Privat-docent, since 1918 professor at Moscow University, in 1919–1930 professor of the Communist University named by Y. M. Sverdlov.

Kliment Arkadyevich Timiryazev (Timirjazev, Климент Аркадьевич Тимирязев, * 1843; † 1920), a Darwinist, corresponding member of the Russian Academy of Sciences since 1871, professor at the Petrovsky Agricultural and Forestry Academy, from 1878–1911 at Moscow University. Married to Alexandra Alekseevna Timiryazev (Timirjazev, Александра Алексеевна Тимирязева, born Loveyko (Ловейко), first married Gottwalt (Готвальт), * 1857; † 1943).

Gaston Tissandier (* 1843; † 1899).

Miha Tišler (* 1926 Ljubljana).

Franz Titelmann (Titelman, * 1498 Hasselt in the district of Liège; OFM cap; † 1537),

Giuseppe Toaldo (* 1719; † 1797).

Richard C. Tolman (* 1881; † 1948 Pasadena).

Eduard baron Tomaschek (Emanuel, * 1810 Matzen in Lower Austria; † 11 December 1890 Vienna).

Adam Tomcsányi (* 1755; † 1831).

Aleksandar S. Tomić, NanoLab, Faculty of Mechanical Engineering, University of Belgrade.

Petar Tomić (* 1839 Zabok in Zagorje; † 1918).

Sin-Itiro Tomonaga (* 1906; † 1979).

Lewi Tonks (* 1897; † 1971).

August Töpler (Toepler, * 1836; † 1912).

Josip Torbar (* 1824; † 1900).

Gisela Torkar works at *Deutsches Museum* in Munich.

Giovanni Maria della Torre (* 1713; † 1782).

Ludwig II della Torre (* 1338; † 1365).

Evangelista Torricelli (* 1608; † 1647).

Maurizio Torrini (* 1942 Firenze; † 2019 Firenze).

Stephen Toulmin (* 1922 London; † 2009 Los Angeles).

Richard Towneley (* 1629; † 1707).

John Sealey Edward Towsend (* 1868 Galway; † 1957).

Arnold Joseph Toynbee (* 1889; † 1975).

Antonio Targioni Tozzetti (* 1785; † 1856).

Muzio Giuseppe Spirito knight de Tommasini (Mutius von Tommasini, * 1794 Trieste; † 1879).

Luca Tozzi (* 1638 Frignano; † 1717 Napoli).

Antonio Trampus (* 1967 Trieste).

Johann Thomas Trattner (* 1717 Jormansforf in Burgerland; † 1798).

Nikola Trbojevich (Trbojević, * May 21, 1886 Petrovoselo in Lika; † December 2, 1973 Los Angeles).

Sam Bard Treiman (* 1925 Chicago; † 1999 New York).

Henri Édouard Tresca (* 1814 Dunkirk; † 1885 Paris).

Franc Tricarico (* 1719; † 1788).

Fortunato de Tridento (* Val di Sole; † 1674).

Franz von Paul Triesnecker (Drissenecker, * 1745; † 1817).

Philippe du Trieu (Phillipe Triev, * 14 November 1580 Havré in the province of Hainaut in Wallonia region of Belgium; SJ 27 May 1603 Tournai; † 25 August 1645 Douai in northern France).

Nicolas Trigaut (* 1577; SJ; † 1628).

George Lockwood Trigg (* 1925; † 2014 Pennington, New Jersey), editor of *Physical Review Letters (PRL)* from 1958 through 1988, published on quantum mechanics and modern physics in 1964-2005 connected to Brookhaven National Laboratory, Upton, N.Y.

Johann Georg Trigler von Igleraw (Triegler von Iglerau, fl. 1613-1622) the magister of philosophy as well as astronomer, captain (Hauptmann) as a sort of military engineer of the castle and manor Goldenstein (Branná, former Kolštejn) in Bohemian Sudetenland. The former Ljubljana based protestant Hieronymus Megiser has dedicated to his friend Trigler fifth of the volumes of Megiser's translations from French and Italian languages into German language entitled *Theatri Machinarum* as the addition to the first three volumes of Heinrich Zeising's *Theatri Machinarum*.

Jurij Andrej Triller Count Trilek (* 1663; † 1701).

Johann Bartholomäus Trommsdorf (* 1770 Erfurt; † 1837).

Louis Joseph Troost (* 1825 Paris; † 1911).

Primož Trubar (* 1508; † 1586).

Clifford Ambrose Truesdell III (* 1919 Los Angeles; † 2000 Baltimore).

Donald Trump (* 1946 New York).

John George Trump (* 1907 New York; † 1985 Cambridge, Massachusetts).

Melania Knaus marred Trump (Melanija, * 1970 Novo Mesto-Sevnica).

Lu Tsan-ning's (* 919; † 1001 AD).

Gustav Tschermak Edler von Seysenegg (* 1836; † 1927).

Raphael Tsu (* 1931 Shanghai).

James Leslie Tuck (* 1910 Manchester; † 1980).

Ana Konkordia Elisabeth Turjaška (Auersperg, * 1610; † 1636).

count Ditrih Turjaški (Dietrich Teodorik Auersperg, * 1578; † 1634).

count Janez Andrej Turjaški (Auersperg, * 1615; † 1664).

Heinrich Turjaški (Auersperg, * 1721 Graz; † 1793 Graz).

Herbert VIII Turjaški (Auersperg, * 1528; † 1575).

count Herbert Turjaški (Herward Auersperg, * 1613; † 1678).

19th count Herbert Turjaški (Auersperg, * 1733; † 1801).

Prince Janez Franc Ferdinand Turjaški (Auersperg, * 1655; † 1706).

Janez Vajkard Turjaški (prince Johann Weikhard Auersperg, * 11 March 1615 castle Žužemberk; † 13 November 1677 Ljubljana).

baron Krištof Turjaški (Auersperg, * 27 October 1550 Turjak; † 14 May 1592 Ljubljana).

count Volk Engelbert Turjaški (Wolf Auersperg, * 1610; † 1673).

Volker Turjaški (Volkhard, Volklein Auersperg, * 1401; † 1451/1454).

Edward Turner (* 1798; † 1837).

Gregor Tuschar (Tušar, * 6 March 1816 Idrija; † 12 November 1891, Gorizia), classical philologist retired as Gorizia High School professor.

Nasir al-Din Tusi (al-Din al-Tusu, Nasradin Hođa, * 1201 Tus in Iran; † 1274 Baghdad).

Ivan Tušek (* 1835; † 1877).

Richard Quintin Twiss (* 1920 Simla in Northern India; † 2005).

John Tyndall (* 1820; † 1893).

U

Franz Übelacker (baptized Johann Georg Uebelacker, Abbé Georg after 1782, Ubelacker, * 1742 Meersburg, Baden-Württemberg; OSB in abbey Petershausen of north Konstanz by German border with Switzerland in 1761–1782; † after 1800 Vienna or Graz).

Udagawa Shinsai (宇田 川 榛 齋, * 1769; † 1832).

Udagawa Yōan (宇田 川 榕 菴, * 1798; † 1846).

Eduard Uhl (* 1813; † 1892).

Anton de Ulloa (* 1716 Sevilla; † 1795 Isla de León).

Robert David Ulrich received his PhD under the supervision of Fraser Pierpont Price at University of Massachusetts Amherst in August 1972, in 1978 worked at Noryl Products Department of General Electric Plastics Division, Selkirk, New York, USA.

Ulugh Beg (* 1393; † 1449).

baron Ivan Ungnad (Johann, * 1493; † 27 December 1564 Vintiřov).

Leopold Baron Unterberger (* 1734; † 1818).

Francis Robbins Upton (* 1852 Peabody; † 1921 Orange New Jersey).

Kurt Urban (* 1904; † 1928).

Alfred knight Urbanitzky (* 1852 Voitsberg 30 km west of Graz in Styria; † 1905 Vienna).

Jožef Urbanizi (OFM; † 16 March 1708 Novo Mesto).

Anton Urbas (* 13 September 1822 Idrija; † 22 September 1899 Ljubljana).

Milena Uršič (* 1901 Ljubljana: † 1990 Ljubljana).

Viktor Aleksandrovich Urvalov (Виктор Александрович Урвалов, * 1928 Leningrad (Ленинград)), in 1980 became a head of the historical section of the VNTORES in Leningrad (now RNTORES, Russian Scientific and Technical Society of Radio Engineering, Electronics and Communications) named after A.S. Popov in St. Petersburg (Исторической секции ВНТОРЭС - Ленинград, now РНТОРЭС - Российское научно–техническое общество радиотехники, электроники и связи имени А. С. Попова в Санкт-Петербурге).

Nikolai Dmitriyvich Ustinov (Nikolaĭ Dmitrievich, Николай Дмитриевич Устинов, * 1931 Moscow; † 1992 Moscow), son of the leading Soviet politician

Marshal of the Soviet Union Dmitriy Fyodorovich Ustinov (Дмитрий Фёдорович Устинов, * 1908 Samara (Самáра) in southeastern Russia; † 1984 Moscow).

Gaetano Gaspar Uttini (* 1741; † 1817).

V

Anton Vakselj (* 1899; † 1987).

Marko Vakselj (* 1932; † 2017).

Eduard Valenta (* 1857; † 1937).

Matija Valjavec (Kračmánov, * 1831 Srednja Bela by Preddvor; † 1897 Zagreb).

Count Janez Ambrož Thurn-Valsassina (* 1553; † 1625).

His grandnephew Count Janez Ambrož Thurn-Valsassina († 1654).

count Janez Krstnik Thurn-Hoffer and Valsassina (* 1699; † 1783).

Josef Thurn-Hoffer and Valsassina (Hofer, * 1681; † 1775).

(baron) Janez Vajkard Valvasor (* 1641; † 1693).

Carl Clinton Van Doren (* 1885 Hope, Illinois; † 1950 Torrington, Connecticut).

Alois Vaniček (* 1825 Prague; † 1883 Prague) professor of classical philology at German Grammar School (Gymnasium) in Olomouc (Olmütz).

Giovanni Francesco Vanni (* 1638 Lucca; SJ; † 1709 Rome).

Anton Vanossi (Antal Vanossy, Antonio Vánossi, * 1683 Raab (Györ); SJ 1703 Graz; † 1757 Rome).

Aimé Varcin (* 1630; † 1702).

Johann-Franz Varrentrapp (* 1706; † 1786).

Pierre Varignon (* 1654 Caen; SJ; † 23 December 1722 Paris).

Cromwell Fleetwood Varley (* 1828; † 1883).

Jan II Kazimierz Vasa (Jean-Casimir Waza, * 1609, king 1648-1668; † 1672).

Ladislaus IV Vasa (Władysław IV Waza, * 1595; king 1632; † 1648).

Abraham Vater (* 1684 Wittenberg; † 1751 Wittenberg).

Christian Vater (* 1651; † 1732).

Sergej Ivanovič Vavilov (Sergey Ivanovich Wawilow, Сергéй Ивáнович Вави́лов, * 1891 Moscow; † 1951 Moscow).

Natalja Vasiljevna Vdovičenko (Наталия Васильевна Вдовиченко, Natalija Vasilivna Vdovichenko, Vdovȳchenko, Natalija Vasylivna Vdovychenko, * 1940 Soviet Union).

France Veber (* 1890 Gornja Radgona; † 1975 Ljubljana).

Vanna Vedaldi Iasbez (Jazbec, * 1943), professor of Roman administrative history at the University of Trieste since 1991.

Inca mestizo Prince Garcilaso de la Vega (Gómez Suárez de Figueroa, El Inca, El Inka, Ynca, * 1539 Cusco; † 1616 Cordoba).

Jurij baron Vega (* 1754; † 1802).

Lars Vegard (* 1880; † 1963 Oslo).

Vladimir Veksler (Володимир Йосипович Векслер, * 1907 Zhytomyr in western Ukraine; † 1966 Moscow).

Joannis Velikanović (Ivan, * 1723 Slavonski Brod, 1723; † 1803 Vukovar).

Helena Klara Velikonja (* 1936; † 1991).

Narte Velikonja (* 1891; † 1945).

Josip Velko (Welko, * 1825; † 1896).

Jean-Mathieu Tournu de Ventavon (Wang Dahong, Matou, 汪達洪, * 1733; † 1787).

Pier Paolo Vergerio the Elder (* 23 July 1370 Koper; † 1444/45).

Hubert Germain Verhaeren (* 1877 Zundert, The Netherlands; Congregatio Missionis CM), returned to Beijing in 1920.

Auguste Victor Louis Verneuil (* 1856 Dunkirk; † 1913).

Pietro Verri (* 1728; † 1797).

Evert Johannes Willem Verweij (Verwey, * 1905 Amsterdam; † 1981 Utrecht).

Alenka Vesel, president of DVTS elected in 2020.

Nicolò Vidacovich (Vida-Covi, * 1875 Trieste; † 1934).

Ivan Vidav (* 1918; † 2015).

Luka Vidmar (* 1977).

Milan Vidmar (* 1885 Ljubljana; † 1962 Ljubljana).

Artur Viegas (* 1868 Mata (Torres Novas), Portugal; SJ 1882 Barro in Portugal; † 1929 La Guardia (Pontevedra) in Spain).

Augusto Vierthaler (* 1838 Vienna; † 1901 Trieste).

François Vièta (Viète, * 1540; † 1603).

Gotthold Richard Vieweg (* 1896 Topfseifersdorf; † 1972 Kälberbronn).

Josip Vilfan (* August 30, 1878 Trieste; † March 8, 1955 Belgrade).

Aleksander Vilhar (* 16 February 1814 Mountain (Planina) no. 74 by Rakek; † 1868).

Dušan Vilhar (* 1867; † 1913).

Miroslav Vilhar (Wilicher, * 1818, Upper Mountain (Planina) no. 74; † 1871).

Wilhelm Vilhar (Vilim, * 12 February 1840 Planina no. 74).

Arnoldi de Villa Nova (Arnaldus Villanova, * around 1235 near Valencia; † 1311 at sea between Naples and Genoa).

Paul Ulrich Villard (* 1860; † 1934).

Charles Marie Joseph Hennequin de Villermont, count de Villermont (Carlos, * 1864 area of Couvin in southeast Belgium; † 1929), mayor of Boussu-en-Fagne 4 km north of Couvin in southeast Belgium in 1900-1921.

Ioannes Vincentius (Jean Vincent, * ca. 1606; around 1625 joined the Doctrinaires (Prêtres séculiers de la doctrine chrétienne Secular Priests of Christian Doctrine a French religious order founded in 1592 by Cesar de Bus); † ca. 1673/1677) taught philosophy and became rector of the college at Toulouse, later also a provincial. Used to be a Thomist and critic of Cartesians.

Leonardo da Vinci (* 1452; † 1519).

Mykolas Kaributas Visniaveckis (Wisniowecki, * 1649; king from 1669; † 1673).

Mutio Vitelleschi (Muzio, Mutius Vitelesco, * 1563 Rome; † 1645 Rome).

Joseph Vitanović (* 1843 Tenja in eastern Slavonia southeast of Osijek).

Marcus Vitruvius Pollio (* about 75/80 B.C.; † about 15/25 A.D.)

Swami Vivekananda (born Narendranath Datta, * 1863; † 1902), an Indic Hindu monk.

Vincenzo Viviani (* 1622; † 1703).

Anatolij Nikolaevič Vjalcev (Vâl'cev, Vjal'cev, Анатолий Николаевич Вяльцев) worked at the Institute of history of sciences and techniques of the

Academy od Science of Soviet Union (сотрудник Института истории естествознания и техники Академии наук СССР).

Andrej Erofeevič Vjatkin (Андрей Ерофеевич Вяткин, * 1903; † 1970).

Giampaolo Vlacovich (* 23 October 1825 Vis (Lissa) ; † 11 January 1899 Padua).

Nikola Vlahovic (Vlahovich, Nicolaus Vlahović, Niccolò Vlacovich, * 1832 Brač or Vis (Lissa); † 1890 Trieste).

Anatoly Alexandrovich Vlasov (Анато́лий Алекса́ндрович Вла́сов, * 1908 Balashov; † 1975 Moscow).

Henri Vleminckx printed in Brussels in 1749-1772.

Hugo Vodnik (baptized Simon, * 1715; OFM; † 1785).

Valentin Vodnik (* 1758 Zgornja Šiška by Ljubljana; OFM; † 1819 Ljubljana).

Peter Vodopivec (* 1946 Beograd), interested in technological aspects of Slovenian history.

Willi Voege (Willy, * 1877; † 1957 Hamburg) worked at Physikalische Staatslaboratorium in Hamburg in Germany.

Samuel Gottlieb Vogel (* 1750; † 1837).

Gottfried Voigt (* 1644 Delitzsch in Saxony; † 1682 Hamburg).

Johann Heinrich Voigt (Johan, * 27 June 1751 Gotha; † 6 September 1823 Jena).

Burchard de Volder (* 1643 Amsterdam; † 1709).

Charles Volet (* 1895 Vevey in Switzerland; † 1992).

Carl Gottfried Wilhelm Vollmer (Pseudonyms W. F. A. Zimmermann by his wife's maiden name, W. C. A. Zimmermann, C. Morvell, * 1797/98 Torún (Thorn) in north central Poland; † 1864 Stuttgart or Berlin).

Alessandro Volta (* 1745; † 1827).

Gennadij Stepanovič Voronov (Gennady, Gennadiĭ Stepanovich, Геннадий Степанович Воронов) is a leading researcher at the Institute of General Physics named by A.M. Prokhorov inside RAS (Russian Academy of Sciences), in Department of Plasma Physics, Laboratory of physics and diagnostics of hot plasma together with Elena Vladimirovna Voronova (Елена Владимировна Воронова).

Antonio Vorster (Anton Forster, Antoine Vorstler, * 12 September 1706 Vienna; SJ 27 December 1721 Vienna; † abt. 1773 Graz?).

Georg Vortmann (Giorgio, * 1854 Treste; † 1932 Barcola (Barkovlje)).

Sergej Vošnjak (* 1924 Ptuj; † 2005 Ljubljana).

Bernard Vovk (* 1824 Brezovica in parish Ovsiše; OFM; † 1911 Brežice).

William Hugh Pembroke Vowles (* 1885 Pembroke; † 1951).

Života Vranić (Žika, * 1934 Mojsinje by Čačak; † 1958 Paris).

Ivan Vrhovec (Verhovec, * 1853 Spodnje Poljane by Ljubljana; † 1902 Ljubljana).

Živko Vukasović (* 1829; † 1874).

Ivica Vuković, senior lecturer at Zagreb University of Applied Sciences.

Stanislas Vydra (Wydra, * 1741; † 1804).

W

Johannes Diderik van der Waals (* 1837; † 1923).

Friedrich Wächter, researched in Vienna in 1880-1914.

Ram Sarup Wadhwa (Рам Саруп Вадхва) physicist from India who studied solid state physics with Nikolai Borissowitsch Brandt (Николай Борисович Брандт, * 1923 Moscow; † 2015 Moscow) in Moscow and married the physicist Natalia Vladimirovna Deineko (Наталья Владимировна Дэйнеко).

Jan Wagenaar (* 1709; † 1773).

Karl Willy Wagner (* 1881 Friedrichsdorf 20 km north of Frankfurt; † 1953 Friedrichsdorf).

Kurt Wagner obtained his PhD at Institut für Gesellschaftswissenschaften, Berlin with a thesis about Walter Gerlach in 1969.

Vincenz August Wagner (* 1790 Thannhausen; † 1833 Guttenbrunn).

Jacob Tripler Wainwright (* 1854).

Robert K. Waits (Bob, * abt. 1935) worked at Fairchild Exploratory Devices section of the physics department and the thin films section technology for fabricating high value resistors in 1960s. in 2001-2020 he resided at Sunnyvale West, California.

Johann Ernst Emmanuel Walch (* 1725; † 1778).

Johann Georg Walch (* 1693 Meiningen; † 1775 Jena).

Joseph Walcher (* 6 January 1718 Linz; SJ 18 October 1737; † 29 November 1803 Vienna).

Beno Waldreich (Valterč, * Tyrol; OFMobs before 1705; † 30 March 1754 Novo Mesto).

Frederic Barnes Waldron († 1973) began as a workshop trainee in a Sheffield sheet metal factory, ending his career as a specialist in glass manufacture. In 1944/45 he worked for Pilkington Brothers Limited in Liverpool, England, and in 1949 he resided at Eccleston Park of Prescot, England. The prize with his name is awarded via the Institution of Mechanical Engineers (IMechE) in London.

Sir Nicholas Peter Rathbone Wall (* 1945; † 2017).

William Wallace (* 1825 Manchester; † 1904).

William Augustine Wallace (* 1918 New York; OP (Dominican friar); † 2015 Washington, DC).

Otto Wallach (* 1847; † 1931).

Ignaz Gustav Wallentin (* 1852 Vienna; † 1934 Baden in Lower Austria).

Johan Gottschalk Walley (Wallerius, * 1709; † 1785).

John Wallis (* 1616; † 1703).

Wolfgang Wallner studied at Graz University of Technology to work there in alumni affairs staff unit since 2008.

Hartmut Walravens (* 1944 Adorf in Diemelsee (Waldeck-Frankenberg)).

Adalbert Carl Ritter von Waltenhofen zu Eglofsheimb (Karl, * May 14, 1828 castle Admontbichl west of Graz in Styria, † 5 February 1914 Vienna).

Ernest Thomas Sinton Walton (* 1903 Abbeyside in Ireland; † 1995 Belfast).

Janez Wanggo (Joannes, * 25 September 1724 Neoforensis (Neumarkt) between Graz and Murau east of Graz in Styria; SJ 15 October 1745 Vienna; † 1799 Graz).

Felix Wankel (* 1902 Lahr; † 1988 Heidelberg).

James Alfred Wanklyn (* 1834; † 1906). = James Alfred Wanklyn (* 1834 Ashton-under-Lyne by Manchester; † 1906 New Malden suburb of south-west London).

Emil Gabriel Warburg (* 1846; † 1931).

Edward Wight Washburn (* 1881 Beatrice, Nebraska; † 1934).

Franz Xaver August von Wasserberg (Franciscus Xaverius de, * 1748 Vienna; † 1791 Vienna), a Viennese translator of many chemical books.

Anton Wassmuth (* 1844; † 1927).

Benjamin Waterhouse (* 1754; † 1846).

Francis Watkins (* 1800; † 1847).

James Watson (* 1928).

Richard Watson (* 1737; † 1816).

William Watson (* 1715 London; † 1787 London).

James Watt (* 1736; † 1819).

Robert Alexander Watson-Watt (* 1892; † 1873).

John Thomas Way (* 1820; † 1883).

Harold Worthington Webb (* 1884; † 1974).

Heinrich Friedrich Weber (* 1843; † 1912).

Johann Adam Weber (* 1611; Augustinian; † 1695).

Wilhelm Eduard Weber (* 1804; † 1891).

Johann Jacob Wecker (* 1528 Basel; † 1586).

Albin Wedam (* 1921; † 1997).

Edgar Wedekind (* 1870 Altona by Hamburg; † 1938 Erfurt).

Josiah Wedgwood (* 12 July 1730 Burslem in Staffordshire, England; † 3 January 1795 Etruria in Staffordshire).

Lienhard Wegmann (* 1918 Amriswil (Thurgau Canton) in Switzerland; † 1986 Triibbach (Wartau, St. Gall Canton)) after his PhD at Zurich University in 1947 developed the electron microscopy for the firm Trüb, Täuber & Co. AG. In 1965 he became a head of development of the division of corpuscular beam devices unit department at Balzers AG focused on the construction of the photoemission electron microscope named Metioscope.

Arthur Wehnelt (* 1871 Rio de Janeiro; † 1944 Berlin).

Gottfried Karl Wehner (Fred, * 1910 Bärenwalde 100 km southeast of Dresden; † 1996 Gauting 20 km southeast of Munich).

Wei Boyang (Wei Po Yang, 魏伯陽, Yunyazi, * Shangyu District, Shaoxing, China) flourished in 121-142.

Ku Wei-ying (古偉瀛) is a professor at the History department of National Taiwan University (Taipei), specializing in 19th and 20th century Chinese history.

Kastul Weibl's (Castul Waibl, Caztallus Waibl, baptized as Janez, * 28 April 1741 Novo mesto, 1756/57 OFM Novo mesto; † 25 October 1805).

Johann Fridericus Weidler (* 1691 Großneuhausen in Thuringia; † 1755 Wittenberg).

Hermann Klaus Hugo Weyl (* 1885 Elmshorn; † 1955 Zurich) theorist of number and physics as well as Husserl's follower in philosophy.

Jean Lazare Weiller (* 1858 Sélestat in Alsace; † 1928 Territet in Switzerland).

Steven Weinberg (* 1933 New York City) son of Jewish immigrants, Nobel Prize winner in physics in 1989.

Ignatz Weiner (Ignaz, * 1831) professor of geometry and architecture at the Communal Lower (later Higher) Real school in Brno in 1860-1882.

Franz Karl von Weinhardt (Weikhard, Weykard, Weykhard, * 1703; † 12 June 1768 Ljubljana).

Adolf Ferdinand Weinhold (* 1841; † 1917).

Ludwig Julius Weisbach (* 1806; † 1871).

Gerhard Wiesenfeldt (* 1966 Germany).

Christian Samuel Weiss (* 1780 Leipzig; † 1856 Cheb in Bohemia).

Edmund Weiss (* 1837; † 1917).

Ida Franziska Weiß (Weiss, * 1925 Bleiburg (Pliberg); † 2009 Klagenfurt).

Albin Weissbach (* 1833; † 1901).

Karl baron Weizsäcker (* 1912; † 2007).

Stephen P. Weldon from Texas, professor at the History of sciences department at University of Oklahoma as the editor of *ISIS'* Current Bibliography of History of Science.

Jean Joseph Welter (* 1763; † 1852).

Georg Wendt received his PhD with research on spectrum of mercury at Tubingen University in 1911, published about electrotechnics in 1912-1956, finally researched for the firm based at the castle (Château) de Corbeville by Orsay at Central France 25 km southeast of Paris.

Wilhelm Wertheim (* 1815; † 1861).

Franz Xavier Wessely (Veselý, * 1819 Rajnocovice 33 kilometres north-east of Kroměříž in Bohemia; † 1904 Kroměříž).

George Westinghouse (* 1846; † 1914).

Karl Josef Westritschnig (* 1947 Althofen (Stari Dvor) by Grafenstein (Grabštajn) in Carinthia).

Karl Avguštin Weykard (* 24 August 1736 Ljubljana).

Andrew Wezyk nicknamed Serpens (* 1377; † 1430).

Bruce R. Wheaton (* July 7, 1944) professor emeritus at Berkeley.

Charles Wheatstone (* 1802; † 1875).

William Whewell (* 1794; † 1866).

John Whitehead (* 1854 Trieste; † 1902 Rijeka).

Willis R. Whitney (* 1868; † 1958).

Rolf Wideröe (Widerøe, * 1902 Oslo; † 1996).

Bohuslav Ritter von Widmann (* 1836 Olomouc; † 1911).

Alois Beckh-Widmanstätten (Aloys Joseph Franz Xaver Beckh Edler von Widmanstetten, * 1754, Graz; † 1849, Vienna).

Johann Emil Wiechert (* 1861; † 1928).

Gustav Heinrich's son Eilhard Wiedemann (Ernst Gustav, * 1852 Berlin; † 1928 Erlangen).

Gustav Heinrich Wiedemann (* 1826; † 1899).

Wilhelm Anton Friedrich Wieghorst headed the firm Wilhelm Anton Friedrich Wieghorst and Company in Hamburg in 1868-1884, also the firm Wieghorst and son.

Wilhelm Wien (Willy, * 1864 Gaffken near Fischhausen (Primorsk, Примóрск) in East Prussia now Russia; † 1928 Munich).

Julius Ritter von Wiesner (* 1838 Čechyně (Tschechen) in Moravia; † 1916 Vienna).

Franz Wiesthaler (* 1825; † 1890).

Eugene Wigner (* 1902 Budapest; † 1995 Princeton).

Martin Johann Wikosch (* 1754 Uherský Brod (Ungarisch Brod) in Moravia; † 1826 Vienna).

Johan Carl Wilcke (* 1732 Wismar; † 1796 Stockholm).

Emil Wilde (* 1793; † 1859).

Franz Xaver Wilde (Franc Ksaver, * 1753 Karłowice Wielkie in Polish Silesia; † 1828 Vienna).

Kajetan Wildenstein (Josef August, * 1703 Styria; † January 6, 1764 Ljubljana).

Dr. Eduard Wildhagen (Pseudonym Hans Killian, * 1890 Fallersleben; † 1970 Hamburg), Berliner editor-publisher, also issued the chess books.

Maurice Hugh Frederick Wilkins (* 15 December 1916; † 2004).

Clyde E. Williams (* 1903 Salt Lake City; † 1988 Ohio?) the president of Battelle's Memorial Institute in Columbus, Ohio from 1934, until he formed his own company named Clyde Williams and Company in Columbus, Ohio in 1958.

Evan James Williams (* 1903 Carmarthenshire in Wales; † 1945).

Ian Wills works at the University of Sydney, Unit for History and Philosophy of Science.

Christophous Wilpenhoffer (Vilpenhoffer, Bilpenhoffer, * 1597; SJ 1614; † 1671).

Alan Herries Wilson (sir, * 1906 Wallasey, Cheshire.; † 1995).

Benjamin Wilson (* 1721 Leeds; † 1788).

Charles Thomson Rees Wilson (* 1869; † 1959).

David B. Wilson (* 1941), professor at Iowa State University.

Harold Albert Wilson (* 1874 York; † 1964 Houston).

James Wilson (* c.1665; † 1730 London).

John Wilson († 1746), gained his M.A. at the University of Edinburgh.

Patrick Wilson (* 1743; † 1811), assistant to his father the professor of practical astronomy in the Glasgow University Alexander Wilson (* 1714; † 1786) in 1782.

Thomas Woodrow Wilson (* 1856; † 1924).

Adolf August Winkelmann (Adolph, * 1848 Dorsten in Westfalen; † 1910 Jena).

Clemens Winkler (* 1838; † 1904).

Johann Heinrich Winkler (Winckler, * 1703 Wingendorf near Lauban; † 1770 Leipzig).

Otto Ch. Winkler (* 1910 Stuttgart; † 1996) worked during three decades for Balzers in Liechtenstein after the establishment of that firm in 1946.

Eduard Winter (* 1896 Hrádek nad Nisou (Grottau, Gródek nad Nysą; † 1982 East Berlin) in Bohemian Sudetenland; † 1982 Berlin), the Catholic priest supporting the Jesuits in 1919-1940, then Nazi professor of history in Prague, and after 1945 Marxist.

Karl Winter, the Viennese electrician, in 1847-1849 experimented with electrophorus locally referred by his name.

Maria Wirgler (* 1879; † 1874).

Erazmus Ciołek Witelo (Witelon, Vitellio, Vitello, Vitello Thuringopolonis, Vitulon, Erazm Ciołek, * 1230 Legnica in Silesia; † 1280/1314).

Ferdinand Maria Wittelsbach (* 31 October 1636; † 26 May 1679) ruler of Bavaria.

Bavarian Prince elector Maximilian I of the house of Wittelsbach (* 17 April 1573; † 27 September 1651)

Duke of Bavaria-Leuchtenberg Maximilian Philipp Hieronymus of the house of Wittelsbach (* 1638; † 1705).

Ferdinand Wittenbauer (* 18 February 1857; † 1922 Graz).

Ludwig Wittgenstein (* 1889 Vienna; † 1951 Cambridge).

Paweł Włodkowic (Paulus Vladimiri, * ca. 1370; † October 9, 1435).

Josef W. Wohinz (Bohinc, * 1943 Knittelfeld between Judenburg and Leoben in Styria).

Jan Nepomuk Woldrich (* 1834; † 1906 Prague).

Maximilian Wolf (Max, * 1863 Heidelbarg; † 1932 Heidelbarg) the pioneer of astrophotography.

Nataniel Mateusz Wolf (Nathanael Matthäus von Wolf, Wolfe, * 1724 Chojnice; † 1784 Gdansk).

Christian Wolff (* 24 January 1679 Breslau; † 9 April 1754).

Jacob Wolff de Pforzheim (Jacobus von Pfortzen, * Pforzheim (Pfortzen) between Stuttgart and Karlsruhe; † 1519 Basel).

William Hyde Wollaston (* 1766 Dereham, United Kingdom; † 1828 Chislehurst, United Kingdom).

Arthur E. Woodruff (Kim, * August 18, 1928 New Haven, Conn.; † September 11, 2004 San Francisco), published on history of science in 1954-1968.

Peter Woulfe (* 1727; † 1803).

Pierre Wouters (* 1702; † 1792).

Andrej Wretschko (Vrečko, * November 14, 1846 Planina (Montpreis) castle 10 km northwest of Sevnica and 10 km south of Šentjur by Celje in Styria owned and renovated by dr. Jožef Gorišek from 1830 until 1851). Vrečko studied at the grammar school and at the University of Vienna, where in 1870 he passed the proficiency test for mathematics and physics while he was J. Stefan's assistant at the Institute of Physics. He was briefly a substitute teacher in Vienna in 1871, then teacher at real school in Maribor and from 1873 a professor at a German grammar school in Brno. From 1885 he worked in Celje, where he was appointed inspector two years later.

dr. Mathias Wretschko (Matija, * 23 February 1834 Jurkloštər or 10 km northwest Sveti Lenart nad Laškim (Sankt Leonhard by Tüffer, now Vrh and Laškim) in Lower Styria; † 18 November 1918 Eichgraben 30 km west of Vienna 1919), the botanist, taught mathematics-physics at Ljubljana Grammar school in 1861-1865, member of Viennese zoological-botanical society, school inspector for Inner Austrian mathematics-Natural History courses at the Viennese Ministry of Commerce (Handels Ministerium) in 1869-1893, knighted in 1883.

Arthur Williams Wright (* 1836; † 1915).

Joseph Wright of Derby (* 1734; † 1797).

Szygmunt Florenty Wroblewski (* 1845; † 1888).

Adolph Wüllner (* 1835 Düsseldorf; † 1908 Aachen).

Gundaker Count Wurmbrand (Ladislaus Gundaccar Gregor Alois von Wurmbrand-Stuppach, * 1838 Vienna; † 1901 Graz).

Michael Wurner (* 30 December 1829 Ljubljana; † 31 January 1891 Feldhof by Graz).

Y

Pavel Nikolayevich Yablochkov (Jabločkov, Jablochkoff, Павел Николаевич Яблочков, * 1847; † 1894).

Charles B. Yarling (* abt. 1950 USA) left Varian Ion Implant Systems to join Process Product Corporation for the rapid thermal processing in 1991.

Natan Aronovich Yavlinsky (Javlinsky, Yavlinskii, Натан Аронович Явлинский, * 1912 Kharkov; † 1962).

Julius Conrad Count Yelin (* 1771; † 1826).

Trygve Dewey Yensen (* 1884; † 1950 Pittsburgh).

Thomas Young (1773; † 1829).

St. Francis Xavier (* 1506; † 1552).

Yu Xi (虞喜, courtesy name Zhongning (仲寧), born in Shaoxing at Zhejiang province, fl. 307-345), a Han Chinese astronomer.

Adolph-Andrei Pavlovich Yushkevich (Adolf Pavlovič Jushkevich, Адóльф-Андрéй Пáвлович Юшкéвич, * 1906 Odessa; † 1993 Moscow).

Z

Giacomo Zabarella (* 5 September 1533 Padova; † 25 October 1589 Padova).

Augusto Zacco (Augusto Antonio M. Zacchi, * 10 November 1662 Padua; † 18 February 1739 Treviso).

Franz Xaver baron Zach (* 1754 Pest, Hungary; † 1832 Paris, France).

Aleksander Zahlbrucker (* 1860; † May 8, 1938).

Karl Zahlbrucker (* 1858 Bratislava; † 7 November 1931 Maribor).

Albert Francis Zahm (* 1862 New Lexington, Ohio; † 1954).

Joannes Zahn (* 1633 Karlstadt; monk Premonstratensians (The Order of Canons Regular of Prémontré); † 1707).

Neža Zajc (* 1979).

Anton Zalar (* 1943; † 2006).

Stanislaw Zalenski (* 1843; SJ 5 November 1857 Baumgartenberg; † 1908).

Bojan Zaletel (* 1920 Postojna; † 1981 Kranjska Gora).

Franz Seraphim Zallinger zum Thurn (Francisco Zallinger ad Turrim, Seraphin, Seraph Zeilinger, * 14 February 1743 Bolzano; SJ 9 October 1760 Upper German Province; † 2 October 1828 Innsbruck) published as Tyrolean professor on mathematics, mechanics, Tyrolean floods and electricity of Tyrolean tourmaline in 1772-1808.

Franz's brother Jakob Anton von Zallinger zum Thurn (* 26 July 1735 Oberbozen (Bolzano) in South Tyrol; SJ 9 December 1753; † 11/16 January 1813 Bozen (Botzen, Bolzano)) published on theology, Newtonianism and Kantianism in 1773-1799.

Franz's brother Joannes Baptist Zallinger zum Thurn (Joann Batista, Giovanni Battista, * August 16, 1731 Bolzano; SJ 9 October 1747 Upper German Province?; † 11 July 1785 Bolzano), published on botany-agriculture as the Jesuitical and ex-Jesuitical professor in 1766-1780.

Marko Zalokar (* July 14, 1918 Ljubljana; † September 4, 2012 Seattle, WA.).

Count Francesco Zambeccari (* 1752 Bologna; † 1812 Bologna).

Giuseppe Zamboni (* 1776; † 1846).

Brne Zamagna (Brno Zamanja, Bernard Džamanjić, * 1735 Dubrovnik; SJ; † 1820 Dubrovnik).

Ludwik Lejzer Zamenhof (Ludwik Łazarz Zamenhof, * 1859; † 1917).

Josip von Zanchi (* 23 August 1710 Rijeka, † 1786 Gorizia).

Gian Girolamo Zannichelli (Joanne Hieronymo, * 1662; † 1729).

Francesco Maria Zanotti (* 1692; † 1777).

Francesco Zantedeschi (* 1797; † 1873).

Pieter Zeeman (* 1865 Zonnemaire on the island of Schowen; † 1943).

Miroslav Zei (* 1914 Nabrežina (Aurisina) by Trieste; † 2006).

Josef Zeilinger (Zeillinger, * 1815).

Theresa married Zeilinger (Zeillinger, * 1824).

Heinrich Zeising (Zeisingk, Zeisenck, † 1610 or a little earlier).

Carl Friedrich Zeiss (* 1816; † 1888).

Vladimir Vasiljevič Zheleznjakov (Zheleznyakov, * 1931 Nizhny Novgorod).

Raffaelle Zelli (Rafael Zell, * 20 August 1772 Jacobuzzi in Italy; = Raffaelle Zelli (Rafael Zell Jacobuzzi, Jacobuzi, Jacobacio, * 20 August 1772 Viterbo 70 km north of Rome;

Bernard Zendrini (Bernardo, * 1679 Saviore by Brescia; † 1747 Venezia).

Jonathan Zenneck (* 1871; † 1959).

Ferdinand von Zeppelin (* 1839; † 1917).

Andrej Zergol (Tergol, Cergol, Zergoll, * 8 September 1595 St. Križ by Vipava (Heilegenkreuz); SJ 8 September 1614; † 23 January 1645 Millstatt by Celovec).

Franz Zergoll von Zergollern (* 1613; † 4 May 1657 Ljubljana).

Philipp von Zesen (Filip Caesio, * 1619; † 1689).

Lazarius Zetzner (* 1551; † 1616 Strasbourg).

Gustav Zeuner (* 1828; † 1907).

Avrelij Zevko (Čeuko, Zheuko, Frans Aurelium Zhenkho, OFM; † 1746 Ljubljana).

Zheng He (鄭和, * 1371; † 1433/35).

Jakob Ziegler (* 1470/71 Landau; † August 1549 Passau).

Baccio Ziliotto (* 1880 Trieste; † 1961).

Marc-Antonio Zimara (Marc Anton, * about 1460 S. Pietro in the Galati (Lecce); † 1532 Padua).

Burkard Zink (* 1396 Memmingen; † 1474 Augsburg).

Johannes Zink (Zengg, * Memmingen; † 1415).

Gilbert J. Zinsmeister (* 1929 (1930) Triesen, Liechtenstein) worked for Balzers Vaduz, Liechtenstein.

Teofil Zinsmeister (Franc, Theophilus, * November 2, 1777 Bavaria; OFMobs October 10, 1796; Entered Carniolan province in 1803; † November 12, 1817 Novo Mesto (Franciscans of Ljubljana's diary, 1658/1660-1828, folio 159)).

Károly Zipernowsky (* 1853 Vienna; † 1942 Budapest).

Vinko Zlatić (* 1974).

Georgius de Zobel (* abt. 1737 Vienna) studied philosophy in Graz in 1754-1755 as a resident of the imperial convict Ferdiandeum in Graz, probably the younger brother of Joannes Georgius de Zobel who obtained his PhD in philosophy in the Viennese Jesuitical class of Franciscus Ginthör (Gindhör, * 1714) in June 1752.

Johann (Ivan Branimir) Zoch (Иван Бранислав Зох, Čika Apik, * 1843 Jasenová in north Slovakia; † 1921 Modra in eastern Slovakia).

Karel Zois (Karl, * 1756; † 1799 Trieste).

Žiga Zois (Sigismund, * 23 January 1747 Trieste; † 10 November 1819 Ljubljana).

Alfred Zöller (Zoeller, † Bavaria?) researched in Charlottenburg by Berlin in 1913-1924. On 1 September 1945 the master mechanic Alfred Zoller founded the Zoller company as a mechanical workshop in Ludwigsburg 12 kilometers north of Stuttgart city center, now headed by Eberhard Zöller (Zoller, * 1 September 1941 Stuttgart?) as a firm for measuring, inspecting and managing cutting tools named E. Zoller GmbH & Co. KG Einstell- und Messgeräte in Pleidelsheim by Stuttgart. Related to the son of Bavarian immigrants in the USA Robert Alfred Zoeller (* 1869 Tarboro, Edgecombe County, NC; † 1954).

Johann Karl Friedrich Zöllner (* 1834; † 1882).

Ivana Zorić, curator of the Nikola Tesla museum in Belgrade

John Vitéz de Zredna (Zrednai Vitéz János, Ivan Vitez od Sredne, * c. 1408 Sredna by Križevci; † 8 August 1472).

Juraj Zrinski (* 12 April 1549 Čakovec; † 4 May 1603).

Count Petar Zrinski (* 1621; † 1671)

Nicoló Zucchi (* 1586; SJ; † 1670).

Mark Zuckerberg (* 1984).

Diego de Zúñiga of Salamanca (Didacus a Stunica, * 1536 Salamanca; Augustinian Hermit; † 1597/1598 Toledo).

Črt Zupančič (Črtomir, * 1928 Ljubljana; † 2018 Munich), the Ljubljana Classical Grammar School classmate of the father of author of this book.

Ivan Zupančič (* 1930 Ljubljana; † 1999 Ljubljana).

Janez Anton Suppanschitsch (Zupančič, * 1785 Ljubljana; † 1833 Koper).

Zvonka Zupanič Slavec (* 1958 Maribor).

Eduard Otto Zwietusch (Edie, * 1866 Milwaukee; † 1931 Berlin).

Otto Zwietusch (* 1832 Germany).

Theodor Zwinger the Elder (* 2 August 1533 Basel; † 10 March 1588 Basel).

Fran Zwitter (* 1905 Bela Cerkev in Carniola; † 1988 Ljubljana).

Vladimir Kosmič Zworykin (Влади́мир Козьми́ч Зворы́кин, * 1889 Murom (Муром) southeast of Moscow; † 1982 Princeton).

Ž

Anton Žabkar (Tone, * 1949 Ljubljana; † 1997 Trzin by Ljubljana) whose father was from Raka by Krško.

Avgust Žáček (* 1886; † 1961).

Jan Žižka z Trocnova a Kalicha (Johann Ziska, John Zizka of Trocnov and the Chalice, * c. 1360; † 1424).

Jože Žontar (* 1932 Kranj) the archivist-historian, son of the historian Josip Žontar (* 1895 Jesenice; † 1982 Kranj).

Darko Žubrinić (* 1956 Zagreb), full professor at Department of Applied Mathematics on Faculty of Electrical Engineering and Computing in Zagreb.

Mirjana Žumer married Pregelj.

Slobodan Žumer (Daša, * 1945), Mirjana's brother.

Lea Županc Mežnar worked at Inštitut za tehnologijo površin in optoelektroniko, Teslova 30, Ljubljana, later Kolektor at Pro d.o.o., Vojkova 10, Idrija.

Andraž Marjan Žvab (* 1980 Kranj; † 2020).
