möcht' er laborieren oder kollaborieren.“*

Jean Paul's Letters as Data for Various Research Domains in the Context of the National Research Data Infrastructure Text+

Digital editions, text collections, and lexical resources each have their very own tradition in the (digital) humanities. At the same time, the data domains share common methods and practices of indexing, modeling, and analysis. The **Text+** consortium in the German National Research Data Infrastructure (NFDI) is dedicated to the **handling of research data** in these three research domains and is **exploring methods and practices of cross-domain use** of datasets and the resulting **collaboration** between research fields.

Jean Paul (1763–1825) was a renowned German writer known for his innovative literary style and profound philosophical insights. His **extensive correspondence** with fellow writers, scholars, and rulers played a significant role in shaping his intellectual development and literary output. Through letters, he engaged in **intellectual debates**, shared **literary ideas**, and sought **patronage** from influential individuals. These correspondences provided him with valuable insights into the intellectual currents of his time and allowed him to establish meaningful **connections** within literary circles. Jean Paul's letters not only reveal his intellectual prowess but also highlight the **importance of written communication** as a medium for intellectual exchange and artistic collaboration during his era.

LIFE CYCLE OF THE (ORIGINAL) EDITION OF LETTERS AND ITS RESEARCH DATA

EDITION

The digital edition of Jean Paul's letters edited by **Eduard Berend** comprises 5.526 letters in full text and as registers. The edition developed by **TELOTA** is published on the platform *Jean Paul – Sämtliche Briefe digital* and makes the letters available as a retro-digitisation **accessible beyond the book structure**, dynamically links the indexes to the letter texts, and offers combinable **filters** as well as a **full text search** for research.

The letters are encoded in XML/TEI, oriented to the guidelines of the DTA “Base Format” (DTABf). **Standardised metadata** (including GND) were recorded for each letter. The project has published the digital edition not only via a **web site**, but has also made the records available under a CC BY-SA licence, and offers, among other things various BEACON APIs for **networking** with other resources.

TEXT COLLECTION

As a text collection, the *Briefe von Jean Paul* in the **DTA infrastructure** comprise 985,703 tokens. All documents available in full text and clearly dated were selected from the digital edition. In addition to the original version, the compiled corpus offers a **normalisation of the historical spellings**, enabling **complex search queries** based on linguistic analyses, as well as **diachronic collocation analyses** with the tool DiaCollo. The research data are also integrated into the large DWDS corpus “Historical Corpora” (1.5 billion tokens).

Das Korpus „Briefe von Jean Paul“ umfasst 5004 Briefe, die der Schriftsteller Jean Paul (Jean Paul Friedrich Richter, 1763–1825) zwischen 1780 und 1825 verfasste. Die Briefe richten sich an insgesamt 627 verschiedene Empfänger/innen und dokumentieren die Korrespondenz des Autors mit bekannten Persönlichkeiten wie Heinrich Jacobi, Caroline und Johann Gottfried Herder, Charlotte von Kalb und Johann Wilhelm Ludwig Gleim, der preußischen Königin Luise und Rahel Levin Varnhagen sowie mit Familie und Freunden/innen.

LEXICAL RESOURCE

As a **lexical resource**, corpora are an important basis for many dictionaries. They show **frequencies**, **variety**, and **change of meaning**, **linguistic niches**, different **spellings** – whether historically or regionally located –, and the word context being important for **collocation information**. And they provide data for **real examples** of the use of a word. The DWDS and the ZDL project *Wortgeschichte digital* as corpus-based **dictionaries are founded on these digital editions and collections**, and also integrate the text collection of Jean Paul's letters.

1822

Gestern waren zum **Thée** bei Elisa an 30 Menschen (worunter über 10 Gräfinnen), deren Namen ich meistens schon eh' die Reihe präsentiert war, zusammt den Gesichtern vergaß (Schöne weibliche sind hier seltener als in Baireut); und ich mußte neben Elisa sitzend vor dem ausgedehnten Zirkel mich hören und sehen lassen. Es ist kein Spaß.

– Jean Paul an Caroline Richter, Dresden, 8. 5. 1822. In: Digitale Neuausgabe der Briefe von Jean Paul in der Fassung der von E. Berend herausgegebenen 3. Abt. der Historisch-kritischen Ausgabe (1952–1964), überarbeitet von M. Bernauer, N. Miller, F. Neuber, 2018, S. 170. (jeanpaul-edition.de)
