

# FAIRsharing for you: journal publishers

For your data policy, for your authors

FAIRsharing guides your authors in...

FAIRsharing assists you in...

**1** identifying the right standards to report their data\*

**2** finding the right databases to deposit their data

**3** improving your guidance to your authors

## FAIRsharing supports you to:

**Create** your interrelated list of databases to recommend, with the standards they implement, and **revise** it over time to adapt to authors' needs and community practices

**Advise** your authors by providing you with a trusted source on the evolving landscape of databases and standards across disciplines

**Make** your data policy discoverable by humans and machines

## To support FAIRsharing you can:

**Signpost** FAIRsharing in your guidelines and policies for authors

**Recommend** that authors register their newly-developed databases and standards in FAIRsharing

**Encourage** authors to use the FAIRsharing DOIs to cite the standards and databases in their manuscript text, or in their Data Availability Statement

**Register** or claim your data policy in FAIRsharing, making transparent the databases and standards you recommend

Reach out to FAIRsharing to collaborate on guidance and collections of standards and databases specific to the needs of your organisation and authors

\* data and metadata for **datasets, software, materials** and **other digital objects**
