Imprint

3rd updated and revised edition of the EU Food Safety Almanac, 2014

Publisher: Federal Institute for Risk Assessment (BfR), Berlin, Germany (www.bfr.bund.de/en)

Editors: Klaus Jürgen Henning, Dr. Stefanie Freyberg, Susann Stehfest, Susanne Kaus and PD Dr. Gaby-Fleur Böhl

Graphics: www.kaisermatthies.com

Typesetting: www.tangram.de

Printing: www.formatdruck.de

No. of copies printed: 6.000

The information provided in this booklet was compiled with the kind support of the Focal Point Network of the European Food Safety Authority (EFSA). The content of this booklet is subject to constant change and reflects to the best of our knowledge the status quo in the autumn of 2013. Some minor changes have been made to the online version.

The EU Food Safety Almanac is available online (www.bfr.bund.de/en) or as printed copy in English or German language.

Reprint allowed with permission of the publisher.

ISBN 978-3-943963-06-2

ISSN 1614-5070 (Print)

ISSN 1614-5089 (Online)

Country profiles – how to read the EU Almanac

Each country profile provides a three page overview of public authorities in the area of food and feed safety.

Diagram depicting the structure of governmental authorities:

Each country profile starts with a simplified diagram that depicts the structure of governmental authorities and hierarchies. Authorities are referred to by their national acronym. The list of abbreviations (chapter 6) contains full names of all authorities listed in the Almanac (in English as well as in the respective national language). Institutions at central/federal level are illustrated in blue caskets, regional/local institutions in turquoise ones.

Legal foundation: Brief description of national legal foundations in the area of food and feed safety at the beginning of the chapter.

In Germany the central legal foundation for food legislation is the Food and Feed Code (Lebensmittel und Futtermittelgesetzbuch). In Germany risk assessment and risk management ...

Institutions at central level (shown in blue caskets): Tasks and activities of each authority are described in a separate section for each authority. The blue box at the beginning of each section contains the acronym and the full name of the authority. The grey box below contains the main tasks in the area of food and feed safety, followed by the city the authority is based in and the authority website.

BfR
Federal Institute for Risk Assessment

- ▶ Risk assessment
- ▶ Risk communication
- ▶ EFSA Focal Point
- ▶ Research

Seat: Berlin
<http://www.bfr.bund.de>

Responsibility: Ten pictograms illustrate the individual areas of responsibility of the respective authority.

| | | | | | | | |
|--|---------------------------|--|------------------|--|---|--|--------------|
| | Plant protection products | | Drinking water | | Genetic engineering | | Contaminants |
| | Feed | | Food supplements | | Residues of veterinary medicinal products | | |
| | Mineral water | | Novel foods | | Zoonoses | | |

Regional and local level: Authorities at regional and local level are described in a separate section. They are introduced by turquoise caskets.

Regional and local levels

Germany consists of 16 federal states, with large individual differences with regards to the size of each state (between 1 and 20 million inhabitants per state). ...

EFSA network: Regulation (EC) No 178/2002 establishing the European Food Safety Authority (EFSA) states that organisations operating in the fields within the authority's mission are to form a network. Organisations that fall under this category are listed under the heading "Institutions involved in the EFSA network".

- Institutions involved in the EFSA network pursuant to Article 36 Reg. (EC) No. 178/2002:**
1. Federal Institute for Risk Assessment (BfR)
 2. Federal Office of Consumer Protection and Food Safety (BVL)

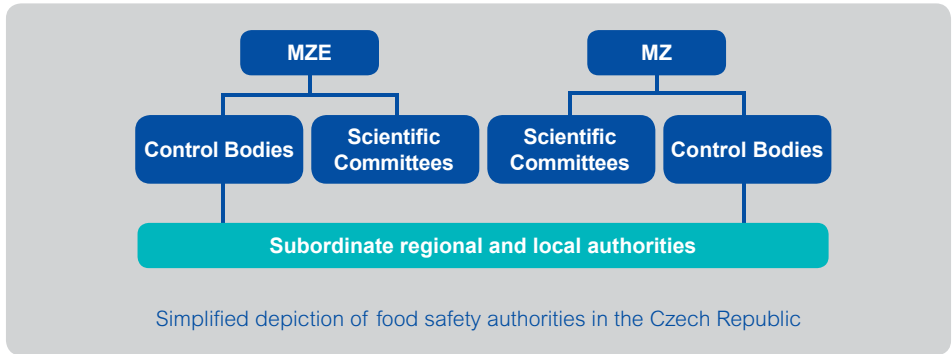

The list of institutions involved in the EFSA Network pursuant to Article 36 Reg. (EC) No. 178/2002 at the end of each country profile is subject to revision. The up-to-date list of each country is available on the internet at: www.efsa.europa.eu/en/scdocs/doc/art36listg.pdf

3.6 Czech Republic

Czech Republic

Act No. 110/1997 Coll. on food and tobacco products is the central legal foundation for food legislation in the Czech Republic. The Food Safety and Nutrition Strategy for 2010–2013 is a key document of the Czech Republic in the field of food safety and nutrition.

Infringement of food regulations can lead to measures under criminal law and consumer damage claims under civil law, whereby the final decision rests with the courts. Government measures with regard to food safety are often based on scientific risk assessment. However, the final decision on the legality of governmental measures rests with the courts.

In the Czech Republic there is no institutional separation of risk assessment from risk management, however there is procedural separation of risk assessment and risk management. Risk assessments are published on the Internet unless there are statutory provisions that prohibit this.

MZE
Ministry of Agriculture

- ▶ Risk assessment
- ▶ Risk communication
- ▶ Risk management
- ▶ Codex Contact Point
- ▶ EFSA Focal Point
- ▶ RASFF Contact Point

Seat: Prague
<http://eagri.cz>

The MZE deals with agricultural policy and food safety in the Czech Republic. It is responsible for foods of animal and plant origin and also for state food inspections.

The portfolio of the MZE also includes food and feed, animal welfare and health, veterinary medicinal products and plant protection products and their residues, contaminants, drinking water, GMOs and food labelling.

The MZE is in charge of supervision especially in the following areas:

- ▶ Czech Agricultural and Food Inspection Authority – food of plant origin, retail of food products of animal origin.

- ▶ State Veterinary Administration – production, processing and distribution of food and feed of animal origin, animal health and welfare, border inspection.
- ▶ Central Institute for Supervising and Testing in Agriculture – hygiene of production, processing, distribution and retail of feedstuffs.
- ▶ State Phytosanitary Administration – phytosanitary matters, plant protection products. The State Phytosanitary Administration is the regulatory authority for plant protection products.
- ▶ Czech Breeding Inspection – animal identification and registration.
- ▶ Institute for State Control of Veterinary Biologicals and Medicines (in collaboration with State Phytosanitary Administration) – veterinary medicinal products and some aspects of plant protection products. The Institute for State Control of Veterinary Biologicals and Medicines is the regulatory authority for veterinary drugs.

Risk communication is another main area of the MZE remit. The Food Safety Information Centre was set up to provide information, accessible to the general public, on all aspects of food safety ("from farm to fork").

Some National Reference Laboratories are attached to relevant competent authorities, which come within the portfolio of the MZE and the MZ, pursuant to Regulation (EC) No. 882/2004.

MZ Ministry of Health

- ▶ Risk assessment
- ▶ Risk communication
- ▶ Risk management
- ▶ Food hygiene

Seat: Prague
<http://www.mzcr.cz>

The MZ deals with public health protection and food safety in the Czech Republic. The portfolio of the MZ includes novel foods, food contact materials, contaminants, additives, mineral water and food supplements.

The inspection competence of the MZ is restricted to food contact materials, food hygiene and, more particularly, the catering trade. The relevant competent authorities are Public Health Authorities (National Institute of Public Health and Regional Public Health Institute).

Some National Reference Laboratories are attached to the MZ.

Regional and local levels

The Czech Republic consists of 14 regions which are further divided into districts.

Food and feed inspections are the responsibility of the regions. In all 14 regions there are regional offices of the State Veterinary Administrations and Public Health Authorities. In seven regions there are regional offices of the Czech Agricultural and Food Inspection Authority and the State Phytosanitary Administration, and in six regions there are regional offices of the Central Institute for Supervising and Testing in Agriculture.

Animal welfare is the responsibility of the municipalities, i. e. to inspect, take measures and deal with infringements.

Institutions involved in the EFSA network pursuant to Article 36 Reg. (EC) No. 178/2002:

1. Mendel University in Brno, Faculty of Agronomy, Department of Animal Breeding
2. National Institute of Public Health
3. Veterinary Research Institute
4. Crop Research Institute
5. Institute of Animal Science
6. Regional Public Health Institute of Ústí nad Labem
7. Czech University of Life Sciences Prague, Faculty of Agrobiological Sciences, Department of Quality of Agricultural Products
8. Food Research Institute Prague
9. Institute of Chemical Technology Prague, Faculty of Food and Biochemical Technology
10. Regional Public Health Institute of Ostrava
11. Biology Centre, Academy of Sciences (BCAS)
12. Faculty of Veterinary Hygiene and Ecology, University of Veterinary and Pharmaceutical Sciences Brno

5 Glossary

| | |
|--|--|
| Biocide or biocidal product | Active substance (or preparations containing one or more active substances) intended to destroy, deter or exert a controlling effect on harmful organisms by chemical or biological means. The term biocide (or biocidal product) implies that the active substance(s) are present in a form or product which can be supplied to the user (cp. Directive 98/8/EC). |
| Codex Alimentarius | (Latin for “food code”) Collection of internationally adopted food standards, guidelines and codes of practice. Although the standards described in the “Codex Alimentarius” are not binding, they serve as a guideline for national food-law regulations. Codex Alimentarius follows the principle that consumers have a right to expect their food to be safe, of good quality and suitable for consumption. The Codex Alimentarius is prepared by the Codex Alimentarius Commission, a working group of the United Nations (FAO) and the World Health Organization (WHO), consisting of 180 member governments. |
| Codex Contact Point | Codex Contact Points act as the link between the Codex Alimentarius Secretariat and member countries. Codex Contact Points receive all Codex final texts (standards, codes of practice, guidelines and other advisory texts) and working documents of Codex sessions and ensure that they are circulated to those concerned within their own countries. |
| Competent authority | An organisation that has the legally delegated authority to perform a designated function. |
| Contaminant  | Any substance not intentionally added to food which is present in such food as a result of the production (including operations carried out in crop husbandry, animal husbandry and veterinary medicine), manufacture, processing, preparation, treatment, packing, packaging, transport or holding of such food, or as a result of environmental contamination. Extraneous matter, such as, for example, insect fragments, animal hair, etc, is not covered by this definition. (Regulation (EEC) No 315/93). |
| Drinking water  | Water from the tap, intended for human consumption. |
| EFSA Focal Point | EFSA Focal Points act as link between the European Food Safety Authority (EFSA) and EU Member States. |
| EU Directive | EU Directives are legislative acts of the EU, which have to be implemented into national law by the Member States. |
| EU regulation | EU regulations apply directly in all Member States of the EU without the Member State having to enact national laws. |
| Feed or Feedingstuff  | Any substance or product, including additives, whether processed, partially processed or unprocessed, intended to be used for oral feeding to animals (Commission Recommendation 2011/25/EU). |
| Food or Foodstuff | Processed, partially processed or unprocessed product or substance intended or reasonably expected to be ingested by humans. (Regulation (EC) No 178/2002) |

| | |
|---|---|
| Food hygiene | Five keys of food hygiene defined by WHO: 1) Prevention of contaminating food with pathogens spreading from people, pets and pests; 2) Separation of raw and cooked foods to prevent contaminating the cooked foods; 3) Cooking of foods for the appropriate length of time and at the appropriate temperature to kill pathogens; 4) Storage of food at the proper temperature; 5) Use of safe water and raw materials. |
| Food safety | Food safety ensures that food consumption (according to its intended use) does not cause harm and/or foodborne illness to the consumer. Appropriate food hygiene contributes towards food safety; however the term food safety also includes the absence of harmful substances such as environmental contaminants or residues of veterinary medicinal products. |
| Food supplements | Nutrients or other substances with a nutritional or physiological effect aimed to supplement the normal diet. Food supplements are usually on the market as capsules, pastilles, tablets, pills, sachets of powder, ampoules of liquids, drop dispensing bottles, and other similar forms of liquids and powders designed to be taken in measured small unit quantities (Directive 2002/46/EC). |
| Genetic engineering | All modern molecular biology techniques used to isolate, manipulate and transfer genes from one organism to another. |
| Institutions involved in the EFSA network pursuant to Article 36 Reg. (EC) No. 178/2002 | Organisations which are approved to undertake work on behalf of EFSA (i. e. data collection, preparatory work for the development of scientific opinions or other scientific and technical support). EFSA distributes “calls for proposals” which describe EFSA’s research questions that need to be answered, and “Article 36 organisations” can apply for the “job”. |
| Mineral water | Bottled water for human consumption either a) natural mineral water, b) natural spring water or c) processed tap water. Natural mineral water is groundwater that has emerged from the ground and contains a certain amount of minerals. Spring water is also groundwater that has emerged from the ground but contains a lower amount of minerals. The icon does not refer to bottled water that is intended for medicinal purposes. |
| Multi annual control plans | A multi annual control plan describes how certain aspects of governmental control and inspection in the area of food and feed safety are organised, conducted and/or implemented. This includes the frequency of inspections, the distribution of inspections amongst business sectors and operators and number of samples to be analysed. |
| Novel food | Novel foods are foods and food ingredients that have not been used for human consumption to a significant degree within the EU before 15 May 1997. In order to ensure the highest level of protection of human health, novel foods must undergo a safety assessment before being placed on the EU market. Only those products considered to be safe for human consumption are authorised for marketing. |

| | |
|--|---|
| <p>Plant protection products or Pesticides</p>  | <p>Active substances and preparations containing one or more active substances intended to protect plants (or plant products) against harmful organisms. The term plant protection product (or pesticide) implies that the active substance(s) are present in a form or product which can be supplied to the user.</p> <p>Active substances in plant protection products may also destroy undesired plants or influence life processes of plants in a way other than as a nutrient (for example growth regulators).</p> |
| <p>Primary food production</p> | <p>Growth, cultivation, harvesting, collection or catching of food, for example harvesting, slaughter, milking or fishing. The term primary food production does not include substantial transformation of food, for example manufacturing or canning, or sale or service of food directly to the public.</p> |
| <p>RASFF Contact Point</p> | <p>The Rapid Alert System for Food and Feed (RASFF) is an information exchange tool for national control authorities within the EU. RASFF has 33 members. Each member has an RASFF Contact Point. When a RASFF member has any information about a serious health risk from food or feed, it must immediately notify the European Commission using RASFF. In particular, Member States have to notify the Commission if they take measures such as withdrawing or recalling food or feed products from the market in order to protect consumers' health and if rapid action is required. The Commission immediately transmits the notification to all members of the network through the contact points.</p> |
| <p>Residue</p> | <p>Substance present in or on plants, plant products, edible animal products or drinking water resulting from the use of plant protection products or veterinary drugs, including their metabolites, breakdown or reaction products.</p> |
| <p>REACH</p> | <p>Regulatory framework for the registration, evaluation and authorisation of chemicals to ensure greater safety in the manufacture and use of chemical substances.</p> |
| <p>Risk assessment</p> | <p>Scientific activity consisting of hazard identification, hazard characterisation, exposure assessment and risk characterisation.</p> |
| <p>Risk communication</p> | <p>Interactive exchange of information of risk assessors, risk managers, consumers, feed and food businesses, academic community and other interested parties with regard to risks, hazards and risk perceptions. Risk communication also includes explanation of scientific risk assessment and risk management decisions.</p> |
| <p>Risk management</p> | <p>Process of weighing policy alternatives, taking decisions and implementing control and inspection procedures to handle risk associated with the food chain.</p> |
| <p>Zoonosis</p> | <p>Any disease and/or infection which is naturally transmissible directly or indirectly between animals and humans.</p> |
