## Key note of handwritten book

This preprint book is helpful for production engineers, textile engineers, students, researchers, professors and professionals in the field of textile engineering and software-based management in textile industry. This handbook is written from author's notebook for exam preparation in Bachelor of Science in Textile Engineering.

A HVI file may contain 15 or more fibre properties. The QAM (Quality assurance manager) finds out the bales out of acceptable range and not down the range of values of important properties.

To observe your important data do the followings:

01. New View → Inventory
02. Select lot ID
03. Select Garment area
04. Set Limit property = None
05. Set data type = values
06. Set view type = Report
07. OK

09. Mix Criteria Definition

Only three properties can be used for  
for prod<sup>n</sup>: [Strength, length Mic]

HVS data file may read 15 or more fibre properties but a target product may not have equal importance to all those properties. The GAM takes the decision about which properties the software should take into account during planning and sets up those properties in the software.

To set the mix criteria do the following:

- 01. configure → Mix criteria
- 02. Select "add a new mix"

05. Category Definition:

In this step, for better uniformity, the  
GAM defines the number of categories.

The software should divide the Bales.

He also sets:

1. Highest value of first category.

2. Interval.

1. Highest value of first group

2. Distance between the selected value  
↓

02. Select the property
03. Set highest value of first category.
04. Set Interval
05. Set numbers of categories.
06. Update → OK → Exit.

06. Equalizing Histogram:

For uniform distribution, the GAM, in this step tries to equalize no of bars in different categories.

If your histogram is not equal enough do the following:

01. change parameters on category definition
  - a. Highest value of first category.
  - b. Interval
02. Define low limit & High limit  
View → inventory

- c. Select Histogram
- d. Select Limit.

ex. Making a Mix:

After setting all parameters, this is time to get result.  
For this step, the CAM tells the computer the numbers of Bales he needs for 1 kg.  
The numbers of Bales must be an even number.

To make your first mix. Do the following.

- 01. Mix - Make
- 02. Give numbers of Bales you need (Even)
- 03. ok

(a) Bales in stock under a particular combined category and Bales to be used.

(b) Total no of Bales

(c) Bales position.

eg. Acceptance :

In this step, the QAM finds out Bale ID from several Bales under a particular combined category.

He also informs the software the ID of the bale he is using to avoid fake Bales in planning.

To find out bale ID : open your inventory Page in category mode.

(a) View → Inventory

(b) Select lot ID, Growth Area

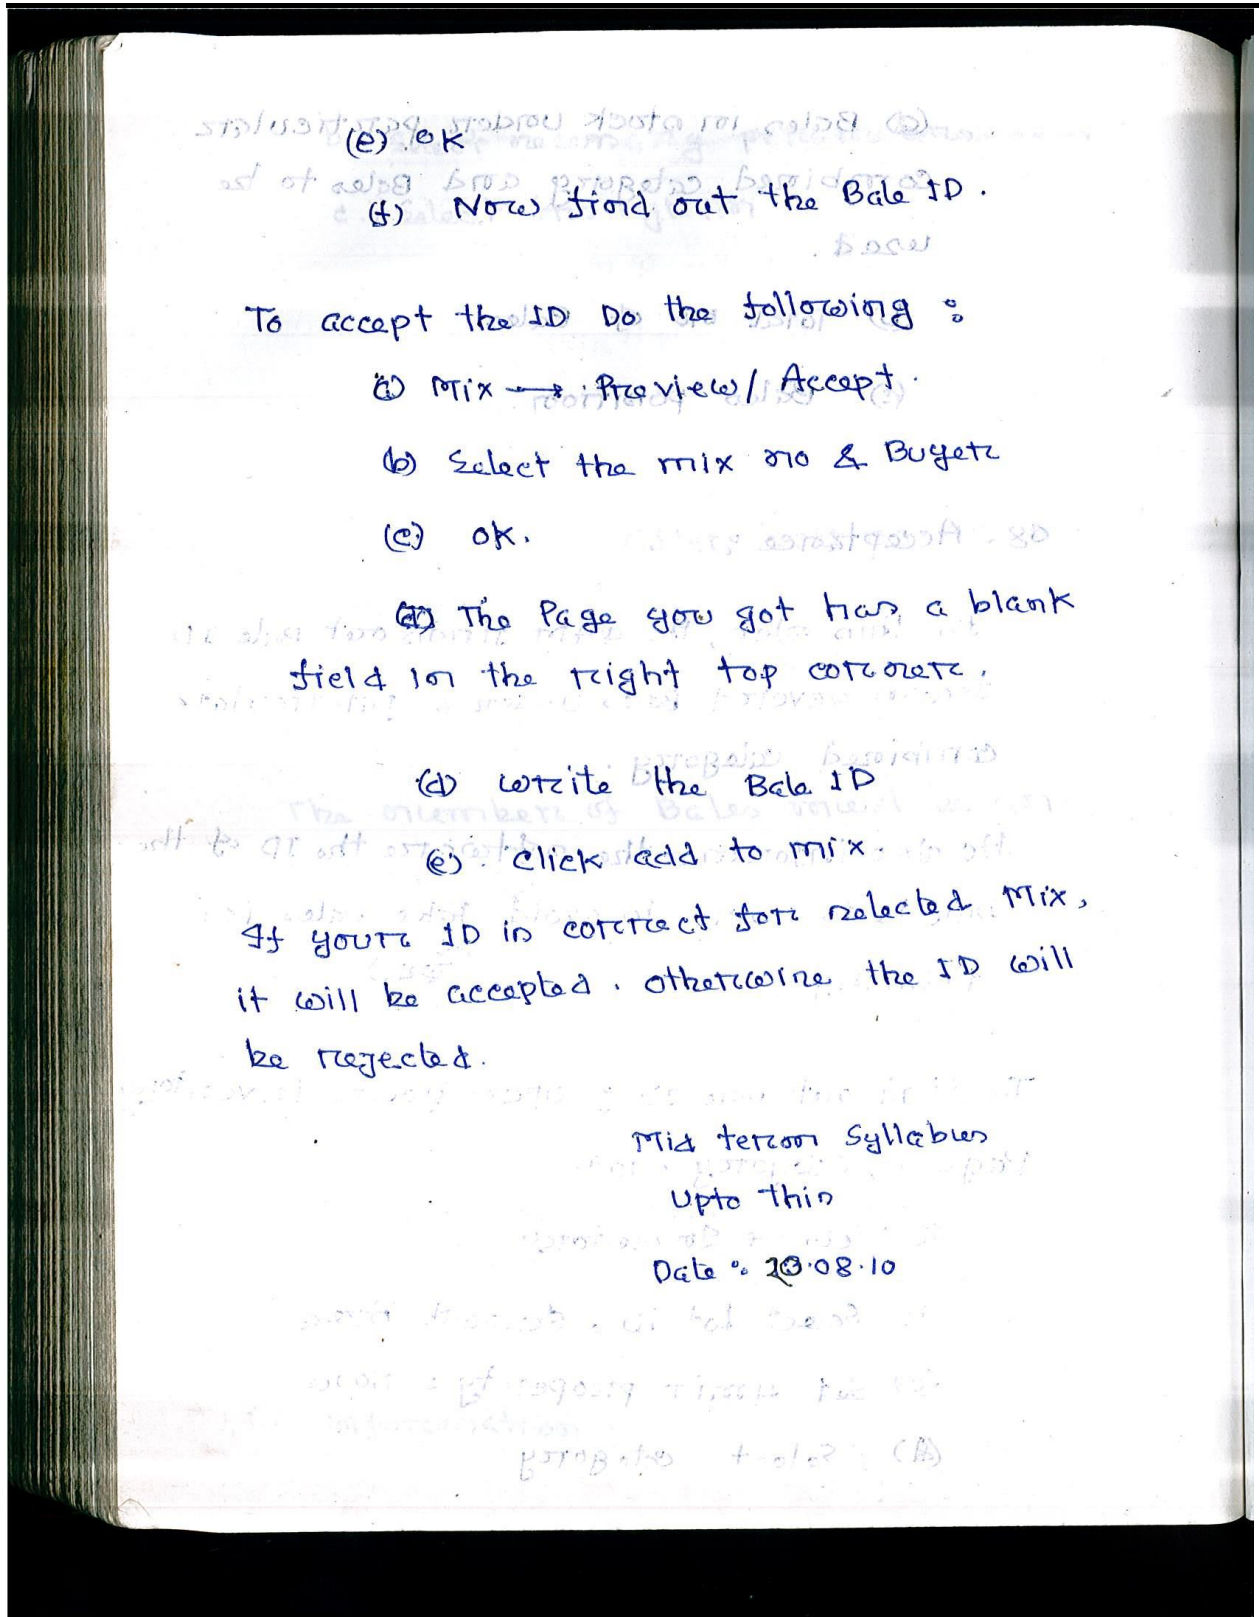

(c) Set limit property = None

(d) Select category
