

Minute-Average_LICOR_LI-7810_Background_Data_20XX-XX

EpochTime_s	• The number of seconds from midnight on 1st January 1970, in UTC, corrected for any time offset and lag time • This is the central time of a 60-second time interval
CorrectedWetCH4_ppm	• Wet methane mole fraction, in parts per million • This value was derived by re-introducing water into dry corrected methane mole fraction • The dry value was corrected from raw dry sampling, using a laboratory calibration • A water correction was also applied to the dry value • An average value taken from all individual values 30 seconds before and 30 seconds ahead of this point in time
CorrectedDryCH4_ppm	• Dry methane mole fraction, in parts per million • This value has been corrected from raw dry sampling, using a laboratory calibration • A water correction was also applied to the dry value • An average value taken from all individual values 30 seconds before and 30 seconds ahead of this point in time
AveragingValues	• This represents the number of individual values used to derive each 60-second average value
