**Abstract.** In this article, the influence of the sectors on small business development, rolan in its social-economic development and clonal statistical data are studied.

**Keywords:** small business, entrepreneurship, Investments, competition, socio-economic development.

**To enter.** The development of small and private business in the republic before the beginning of reforms in the domestic market with products and services of filling first and foremost it was made to look as the solution of the problem. And it is noteworthy to say today, small business full of goals and objectives established before their structures are performing. Small business and private structures they are building new business areas themselves without large financial resources, a shortage of goods, the possibility of reduction in the domestic market, the competitive environment and agriculture an important role in the decision they take has an absolute advantage find some of the territorial unit in the republic, which represented the main source of local budget revenues with his expected results. This with along get who go to many analysis according to yet up to the national economy and its territorial unit in small business development for the available potential in practice full their expression find not.

Small business in today's day in the development of this sector of the regions and economic sectors of development, great attention is paid. Because, mohiyatan, a small business first and foremost local consumer satisfaction and territorial unit of the economic potential of effective use to, this it the regions of development of the issue on the order puts. Same as the aspect also small business and private entrepreneurship in the regions at the level of studies to issue an actual character acquires.

**The main part.**

Mohiyatan small business entrepreneurial and business skills of the population, the development of economic activity, high respects, and the same means that have the potential to irritability of the population are adapted to boosts the level of market conditions. Small business of a society like this of socio-economic, and political relations in the system of the position, especially in the context of the transition period for developing countries plays an important role. Of this republic 's first president, in 2006 the country's socio-economic development of deepening economic reforms in priority areas dedicated in 2007 to the cabinet of ministers “to move from the path of renewal and sustainable development more consistent, abundant living conditions for the people we create basic task” based on deep analysis of mutual small business named on the report given showing three lived in harmony:

- the necessary goods in the internal market (services) and fill with the improvement of the structural basis of the economy in the same manner, increase the level of employment and income of the population;

- mobility, less capital spending in exchange for the organization of production, modernization, expansion of the product range able to get the feature, according to the market through the same power and flexibility to quickly change and growing competition from the aspect of improving quality at the same time as an active participant in the cultivation of embodied relations;

- small business and private entrepreneurship in the developing countries, the most active part of the population – the middle class, they bring the functions in the formation of proprietors of the layer can be based on the example[1].

Given the president by showing these three featured role in the development of small business in the country, according to the aspect in the economic evaluation and future effect not remain confined only expected of him should. Accordingly, each secured in the field of small business as a result of his social life tasks, instead of at the same time also economic, social and political also plays a role.

Exactly the same quality, according to the small business structures related to the development of wide-ranging economic reforms are recognized as priority factor. As a

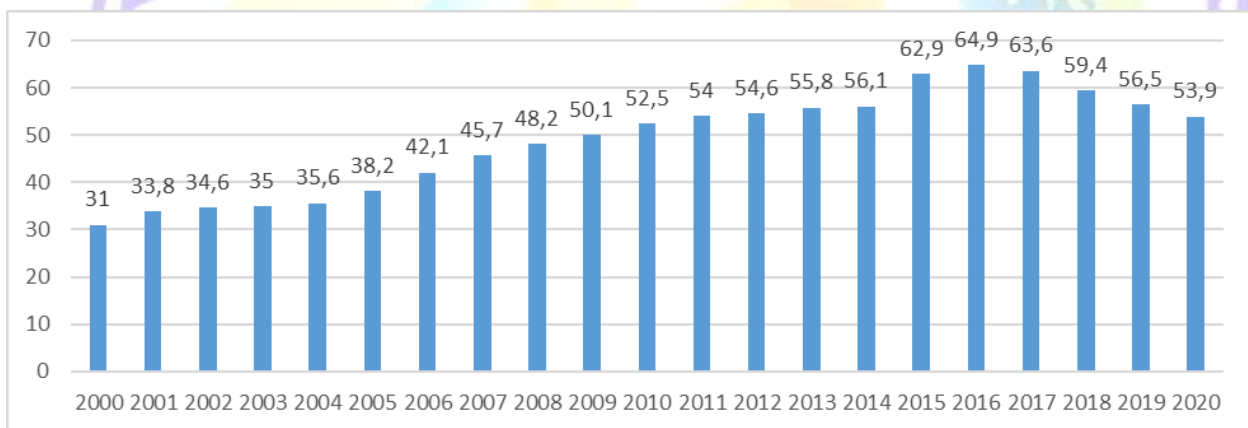

result, today the role of small business and private entrepreneurship in the national economy of the structures has increased significantly. Thus, in the years of independence in uzbekistan following the development of small business through a number of practical outcomes vividly structures can be expressed as:

Small business in gdp, the share of the increase in them by therefore, the reforms carried out in terms of increasing the size of the products is the result. By the way, the recent years (2010 – 2020)at a small business in gdp, the share 25,5 percent to handle increased in the year 2020 53,9 percent up made (1st picture).

**1-picture**

**Small business and private entrepreneurship in the structure dynamic analysis of the share of the gross domestic product of the country, in percent[2]**

Because in the next years the share of industrial production growing at a fast pace in the national economy in conditions of the small business network small business in uzbekistan is exactly in the structure of the industry did not take a position on the level of potential available in the sector. About this target of the president of the country induced transition according to the following review: “another issue that requires particular attention in our country at the present time the small business and private entrepreneurship, mainly in trade and services in the field of communications, are found more on the development of agricultural products processing.

But, at the same time, industry in the field of modern high technology, which require the organization of production networks, innovation and nanotexnologiya of pharmacology

and pharmaceutical, information and communications, biotechnology, the use of a type in the field of alternative energy, in short words, small business and private entrepreneurship, the development of advanced science based on the achievements of the way to wide open,”we need to[3].

1 table.

**Small business and private entrepreneurship on the territory included in the volume of investments into the main capital of the share, in percent[2]**

Country	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019
O‘of uzbekistan uzbekistan , the republic of	up to 28.5	31,9	's 35.3	32,7	35,4	40,3	40,9	38,1	38	47

Tashkent city.	32,8	36,1	38,3	49,2	56,4	58,2	51,8	52,2	up to 53.6	46,6

Small business and private entrepreneurship of the activities of the statistical analysis of the results , we see that this area is uneven investment in the region separates the network incisions can. Total capital investment in year 2019 included in our republic, the major KBXTning if the share was 47%, while on the territory of the republic of karakalpakstan to the lower region of the republic of the figure (it became 32.1), Kashkadarya(29,7), Navoi (19,3), Tashkent (33,9), tashkent (46,6) percent. The remaining regions , while the republic ko‘from rsatkich large that we can(1 table).

Kinside business and private entrepreneurship in the structure of the employment relationship allows the analysis of produced another important conclusion, that is, the structure in the past years the growth in the number of those who are employed in general compared to the number of employed in the economy is greater than the growth rate of 4.8 times. That is, those who are employed in other areas of earlier social production of their business a substantial portion of small business and private entrepreneurship structures also changed. This in turn represents the structural changes that will take place in the economy significantly.

Respublika small and private businesses in the area of the fountains of the gross domestic product contributing to the production of that we have observed in the analysis of the annual growth, regional aspects of the development of this sector in the country to afford variations is removed. These variations in the regions of the country and currently specializes in the development of the specialization of small business network in the network vary from each other in the level of efficiency is caused by. Consequently, Navoi, navoi region, mainly in industrial production specialization fountains network mining, chemical, oil and gas sectors like the basis for competence in the processing industry, as well as the number and the density of the population in this region is relatively low for other regions, they are natural conditions of the region and the ratio of employment to the network in the

production of gross regional product of this contribution remains at low level, some of the small businesses.

The role of small business in the social life of the country being large full scale marketing with its current growth rate in relation to the level of the potential available acquires imbalance. This can be explained by the following circumstances.

Bugungi days rendered one of the main problems in small business creation and development – small business jabhadagi the number of entities that work in the jobs they've created, pay attention to the growth of production volume, as well as the benefits towards them, powerful qolinayotganligidir limited to the improvement of the protection system. In this regard hobby at the same time change the quality to achieve a task.

In this place it's simple primary processing of raw materials, high-tech production has been about the need to transition to the production says," were noted[1].

The practical execution of the task that was put by the president of the country in many ways the region, local and network small business development approach in the economy to rethink radically the program's exit, makes improvements requires. We, now being developed in the program for the development of regional and local small businesses on small business network tashkillanishi network and reduction of regional disparities; economic and legal economy in the formation of skills of running a business; small business sector and the size of the investment that will be attracted to their composition, source solutions, a description of the current technology in their enterprises, and the effectiveness on local and regional level; the program during the duration of the study and regulation of their activities to the control condition, the number of complaints and applications, and content analysis; the condition of the offenders has been put by way of small businesses, the organization of small businesses, be discontinued, re-registration, and the causes of their condition temporary stop of activity should be also taken into account. Approach to the improvement of the software: a) to strengthen the legal system of running the farm; b) increase the level of guaranteeing the freedom of the activities of business organizations; v) investment to support the participation of small business in the market; g) and small business

in all kinds of business entities with the responsibility to commit their views to the formation of economic activity creates the opportunity.

At the same time, the network only share the small business industry in the next five years steady, consistent grew at a pace that can be observed.

Of course, the core sectors of industrial production – mining qazlov, metal processing, machine building, oil-chemical production mainly tend to be major in some developed countries, includingapon according to the practice, and effectiveness of the activities of many of these large producers continuous cooperation with aspects of their small business depends on. Accordingly, in this sector of the industry, component parts, yarimfabrikat, and production of secondary products, the delivery aspects such as small business entities to organize resources in industrial production and the activities of small business development in the area of cooperation with them creates a wide opportunity. In this regard, the country that first adopted in 2006 by the president on the development of the work from home model, the function of specific orders are performing.

Also at the complex at the same time, traditional areas of small business development in today's agricultural production – farms and small farms should continue to improve the activities of consistent work. This is first and foremost, qualitatively at small business development network development, as well as fulfilling some kind of farms in rural areas, social and personal services the company previously come now the responsibility of local government entities associated with the passage of time without the need for additional financial resources to meet the needs of the local budget can be expressed by.

But still, this have been recorded in the relevant territorial unit as and does not express the content of the small business network

- oqsayotganligi of the activities of major industrial development agencies (this in turn, first and foremost the sharp decline in their share in the gross regional product in exchange for going to be, as well as specific major economic entities in the territory of “pole” and have the same potential to play the role of negative influence caused by the decrease of the prosperity of small business);

- some who are unable to achieve a positive and significant structural shift in the industry in the union has the advantage of regional and local agricultural production;
- traditional transitional economy countries who have extensive track direction, that is, small business services, trade and the high share of agriculture sector in uzbekistan as for the cases in the country that is typical regional and regional small business development network is recognized as allowing the development of a set of variations from the aspect factor.

Islam is the 19th anniversary of the constitution of the republic on 6 December 2010 qilinganligining own part in the celebrations of the year in 2011 “the year of small business and private entrepreneurship” and the state program for accepted from dwell about the issues that this should take place on the following priorities and the focus of particular attention:

- the revision of the regulatory framework in the field of small business and private entrepreneurship, improvement;
- create a more favourable environment for small business and private entrepreneurship;
- for small business in the field of tax and other payments, as well as create convenience and light;
- small businesses and technological modernization of production to give further improvement of the system update for the medium and long term loans;
- activation of small business entities involved in the field of foreign economic activity;
- industry in the field of modern high technology, which require the organization of production networks, innovation and nanotexnologiya of pharmacology and pharmaceutical, information and communications, biotechnology, the use of a type in the field of alternative energy, in short words, advanced science based on the achievements of small business and private entrepreneurship development give way to wide open.[3]

We, as reflected in the life of this task and in this regard the organization of regional and local authorities of these government entities and small business development is largely associated with the increase active in the area of clearly defined functions plays an important role.

**Conclusion.** Liberalization of the economy of the process of the enhancement of the regions of the economy development in the area of a number of important task solution of the resolution will find out - comes. Chunonchi, the tasks can maintain the rule of

- the region 's economic independence and strengthen;
- state budget removable dotatsiya by which is covered local budget was a shortage there is the inside from potential using without fill;
- the region and thus increase the income level of the population to raise the level of living of the population;
- the employment level of the population, the increase of business;
- explain faster and deeper to find a resolution in the region of market relations;
- inside the region the territory of the local market and increase export capacity and resources, such as enriched at the expense of others appears.

Of course, the main responsibility in this regard the contribution made without denying the importance of the structure of the major production and fall on the shoulders of small and private business in many ways it should be noted a special place to be.
