*UGM repository for relevant material:*

<https://github.com/MDAnalysis/UGM2023>

# An overview of the MDAnalysis library

simulation trajectory

dcd, xtc, trr,  
ncdf, trj, pdb,  
pqr, gro, crd,  
dms, trz, mol2,  
xyz, config,  
history, gms, ...

psf, tpr,  
prmtop, dms,  
mol2, hoomd  
xml, ...

“accessible”  
structured data  
`numpy.ndarray()`

analysis  
algorithm

Insights &  
publication!

# The MDAnalysis library

- Open source (GPLv2+) **Python** library for handling simulation data
  - Focus on analysing molecular dynamics data
  - ... but really any  $N=\text{const}$  particle-based “trajectories”
- Components to build custom analyses and workflows
  - High level: complete analysis classes (RMSD, RMSF, density, dihedrals/Ramachandran, ENCORE, HOLE,  $g(r)$ , ...)
  - Low level: trajectory data, distance calculations (with PBC), ...
- Platform agnostic
  - All major OS (Linux, macOS, Windows)
  - All major CPU architectures
  - All major MD engine file formats

# The MDAnalysis library

- Support for over 40 file formats
  - **Topologies** (read-only) & **coordinates** (single frame & trajectories)
  - Extensible via *Chemfiles* converter
  - Extensible via own classes (no source code modification necessary)
- MD package independence
  - own internal unit convention (Å, ps ,...)
  - consistent numbering
  - seamless conversion

```
import MDAnalysis as mda
u = mda.Universe("in.prmtpop", "in.nc")

u.atoms.write("out.xtc", frames="all")
```

Software	File Type
AMBER	PRMTOP, RST7, TRJ, NETCDF
GROMACS	ITP, TPR, GRO, TRR, XTC
CHARMM	PSF, DCD, CRD
NAMD	DCD, COOR, NAMDBIN
LAMMPS	CONFIG, DATA, DUMP, DCD
DL_POLY	CONFIG, HISTORY
HOOMD	XML, GSD
GAMESS	GMS
DESRES	DMS
Others	XYZ, TXYZ, PDB, PDBQT, PQR, TRZ, MOL2, MMTF, FHIAIMS, H5MD, etc...

# An overview of the MDAnalysis Organization

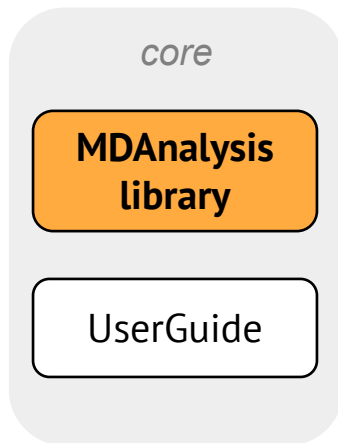

*core*

**MDAnalysis  
library**

# An overview of the MDAnalysis Organization

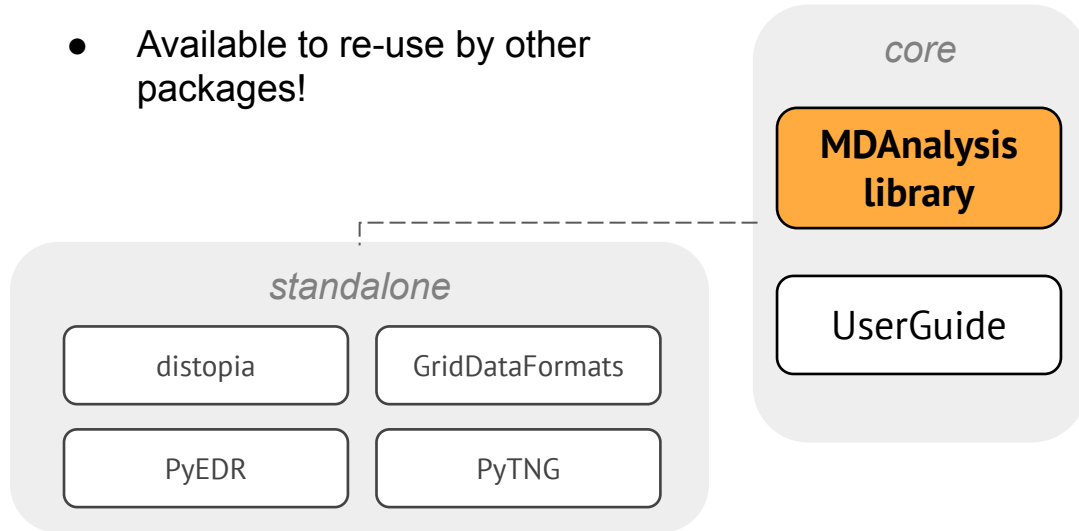

- **User Guide:** Provides worked examples and information about how to use the MDAnalysis library
- Starting to build out comprehensive developer documentation

# An overview of the MDAnalysis Organization

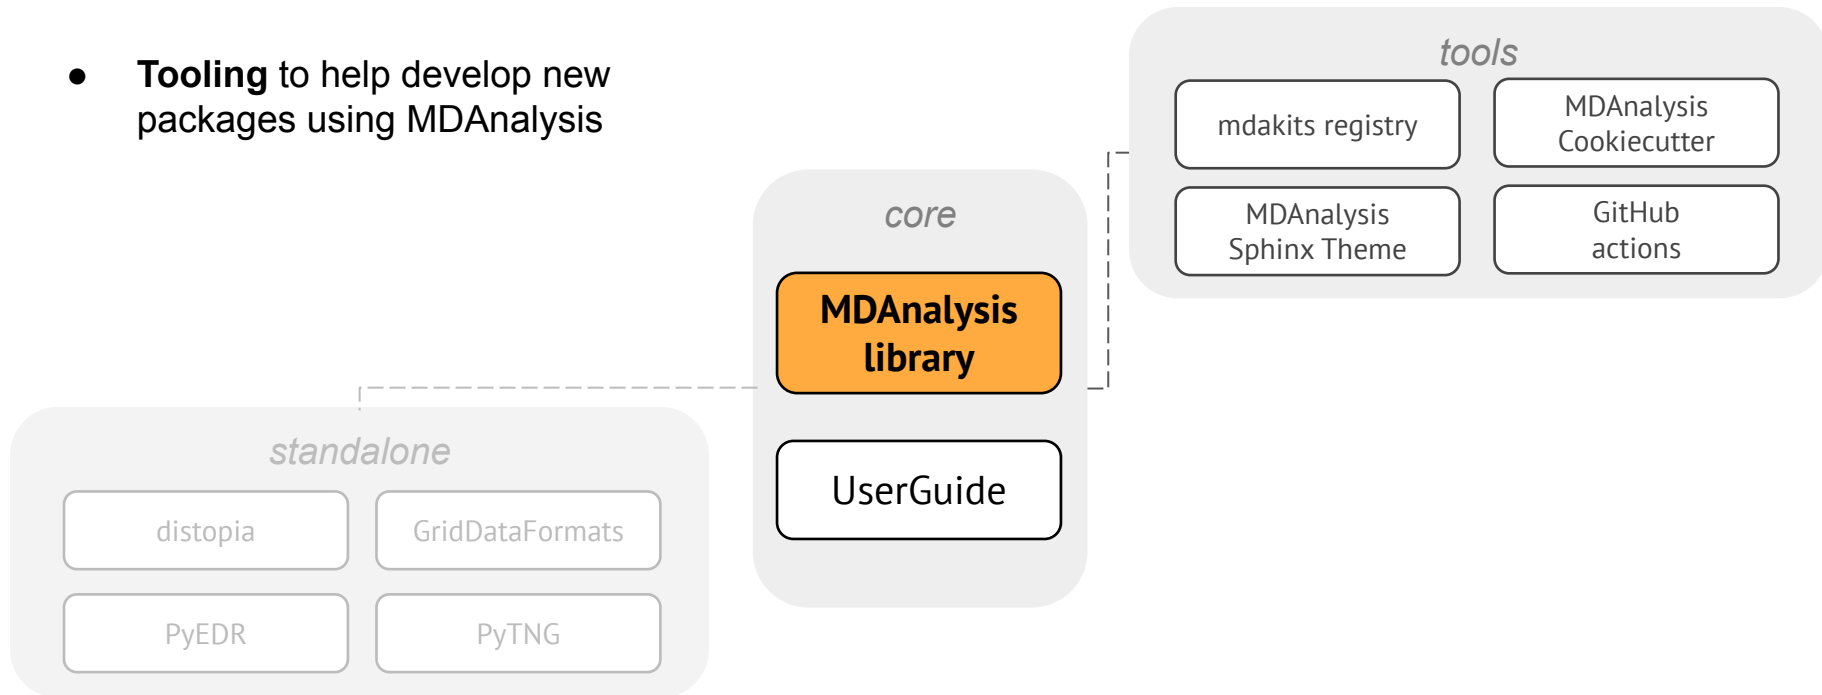

- **Standalone packages** used by the MDAnalysis library
- Available to re-use by other packages!

# An overview of the MDAnalysis Organization

- **Tooling** to help develop new packages using MDAnalysis

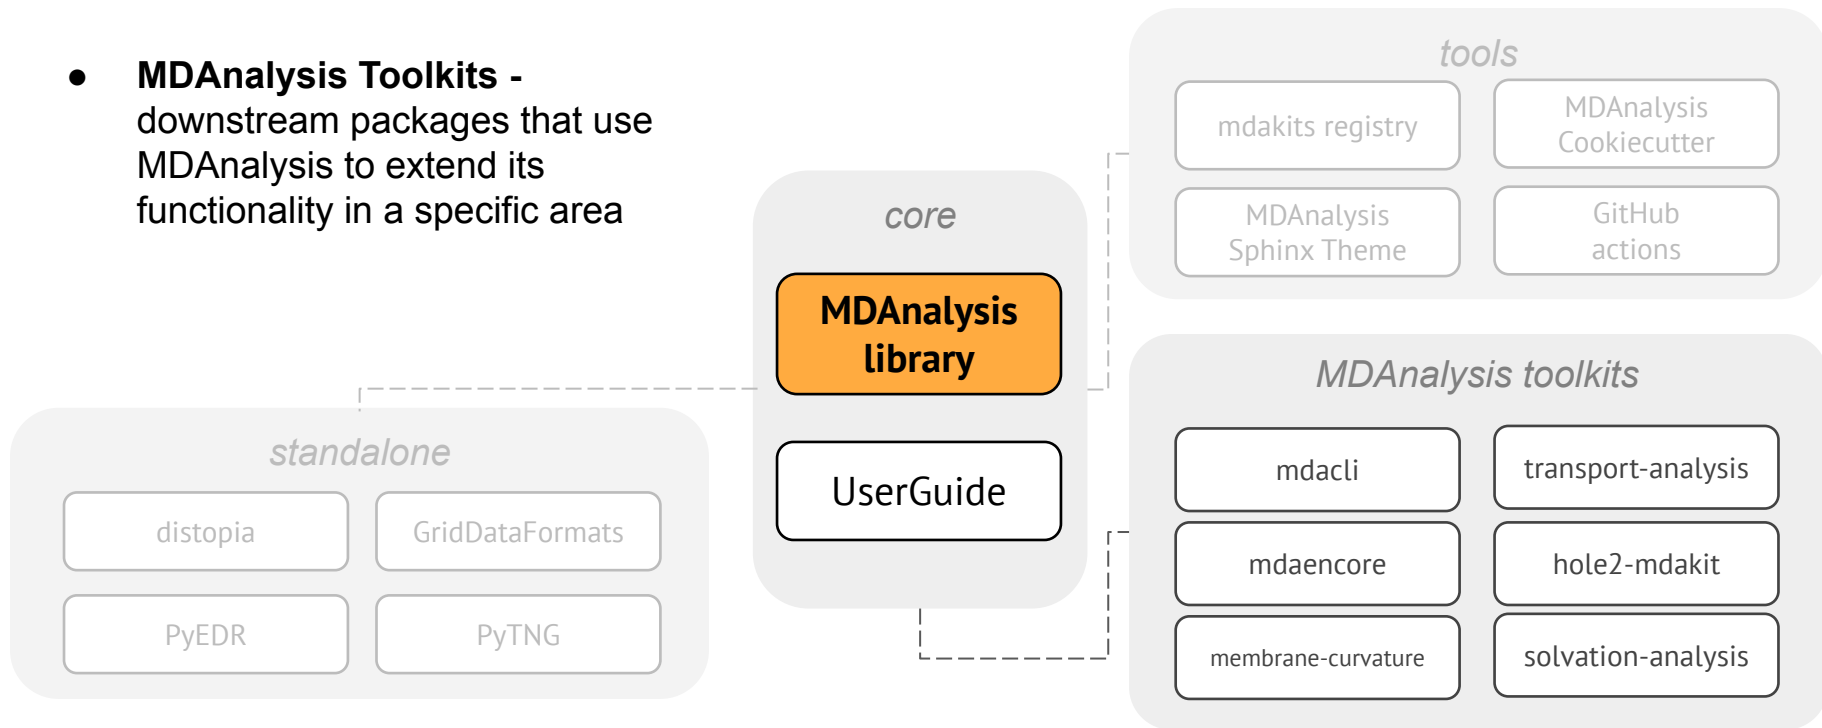

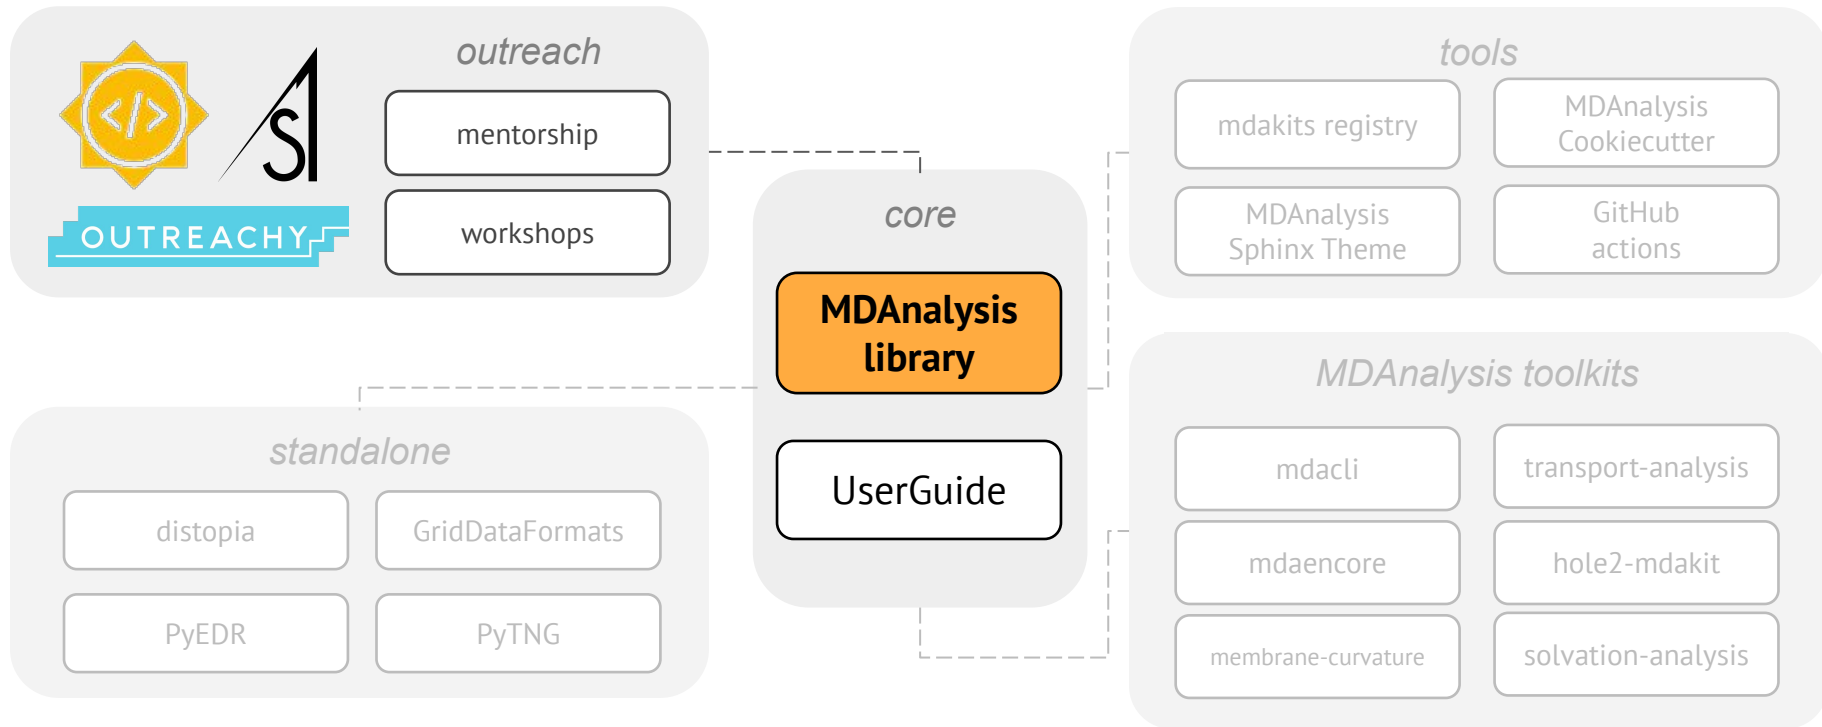

# An overview of the MDAAnalysis Organization

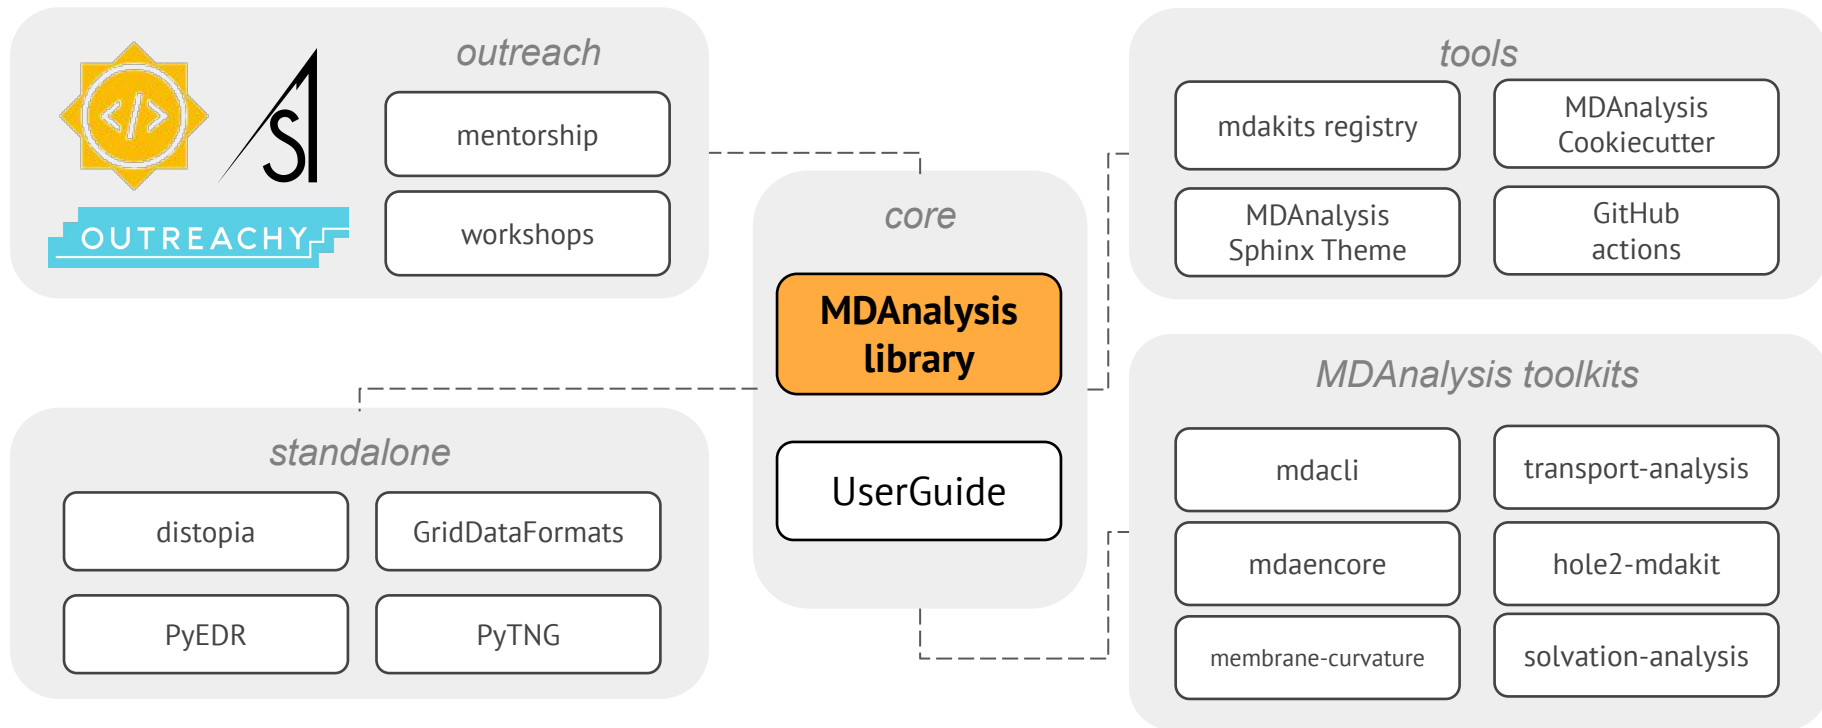

- **MDAnalysis Toolkits** - downstream packages that use MDAnalysis to extend its functionality in a specific area

# An overview of the MDAnalysis Organization

# An overview of the MDAalysis Organization

And much more!

# Who is MDAnalysis?

## 188 code contributors and countless community members

How are we doing?  
*(focusing on the core library)*

# Health of the Project: Citations

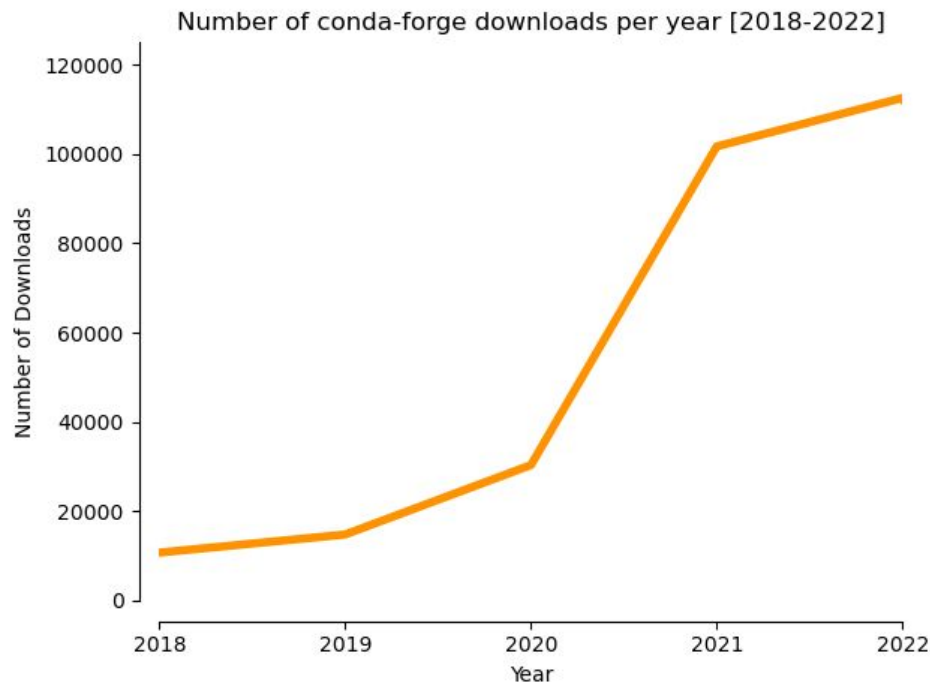

Yearly citations [2006-2022]

- Scopus citation search of MDAnalysis references
- Caveat: does not index all sources (e.g. JOSS)

# Health of the Project: Downloads

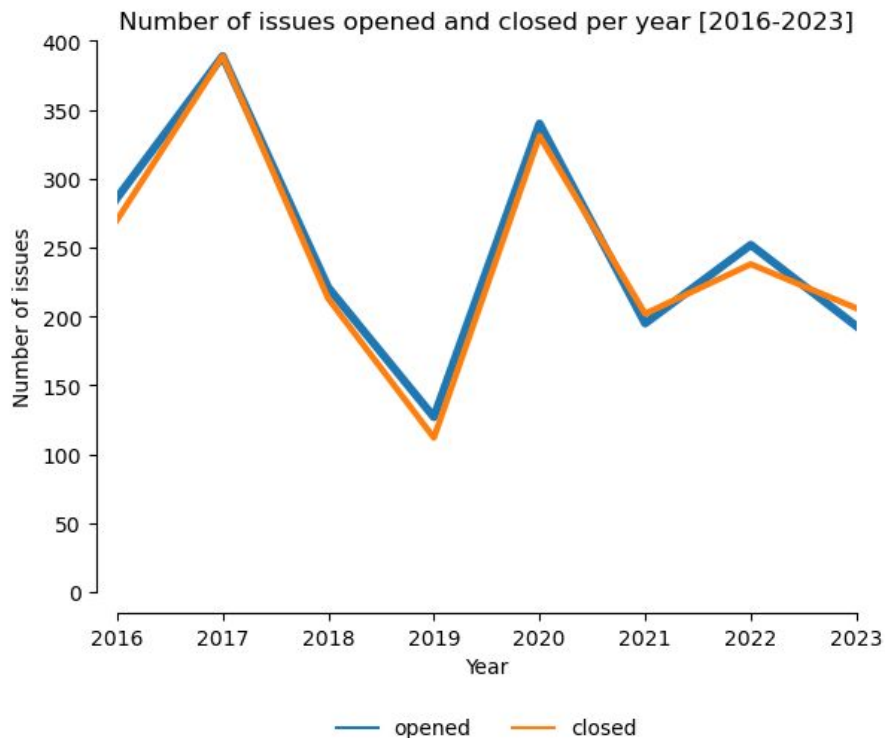

## Conda downloads:

- Yearly downloads over 2018 to 2022
  - Obtained through condastats
- Caveats
  - Includes CI, bots, etc..
  - Concurrent with increasing reliance on conda use

## Other metrics:

- 22430 PyPI monthly downloads
- 120 downstream packages (GitHub)

# Health of the Project: Issues

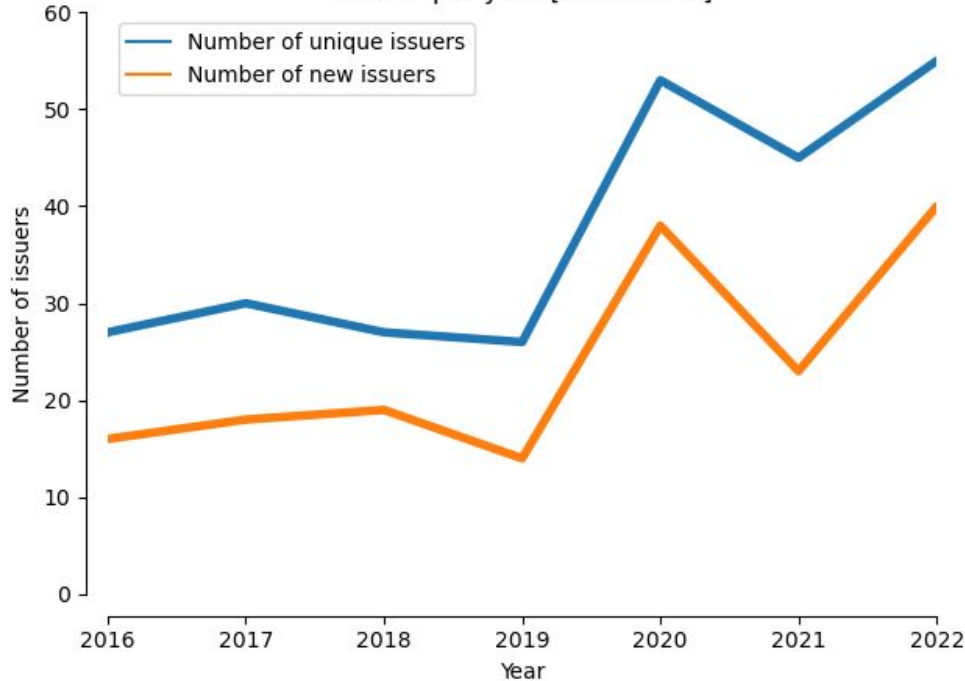

## 410 issues currently open

- Average issue retention time of **37 days**
- Long-standing issues causes:
  - Lower priority features
    - “Nice to have”
  - Obscure bugs
    - Hard to debug
    - Lack of expertise
  - API break needing changes
  - Known limitations

# Health of the Project: Issues

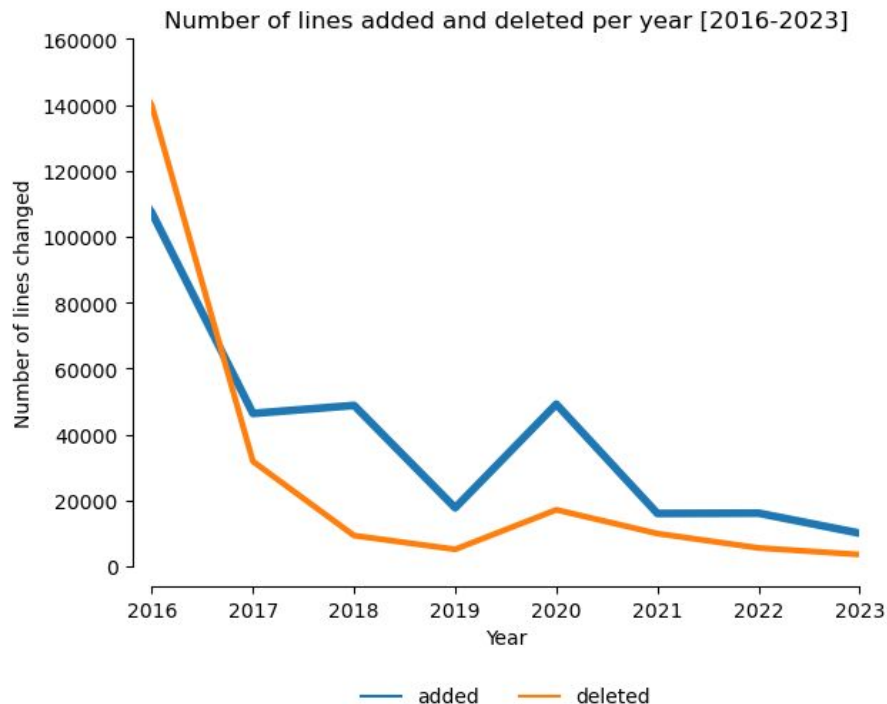

Issuers per year [2016-2022]

## Using issues as a metric for activity

- Unique issuers:
  - Per year, the number of unique individuals raising issues
- New issuers
  - Issuers who have never made an issue before
- Slowly increasing amount of activity
  - Small proportion of total issues raised

# Health of the Project: Contributions

## Activity based on code additions / deletions

- Note: change in which files get merged circa 2016
- Apparent slowdown in volume of code contributions
- Potential causes
  - Shift towards contributing to other packages in ecosystem (standalone tools & MDAKits)
  - Increasing maintenance overhead
  - Changes in API stability priorities post v1.0 release (~ 2020)

# Health of the Project: Contributions - PRs

Number of pull requests opened, closed, and merged per year [2016-2023]

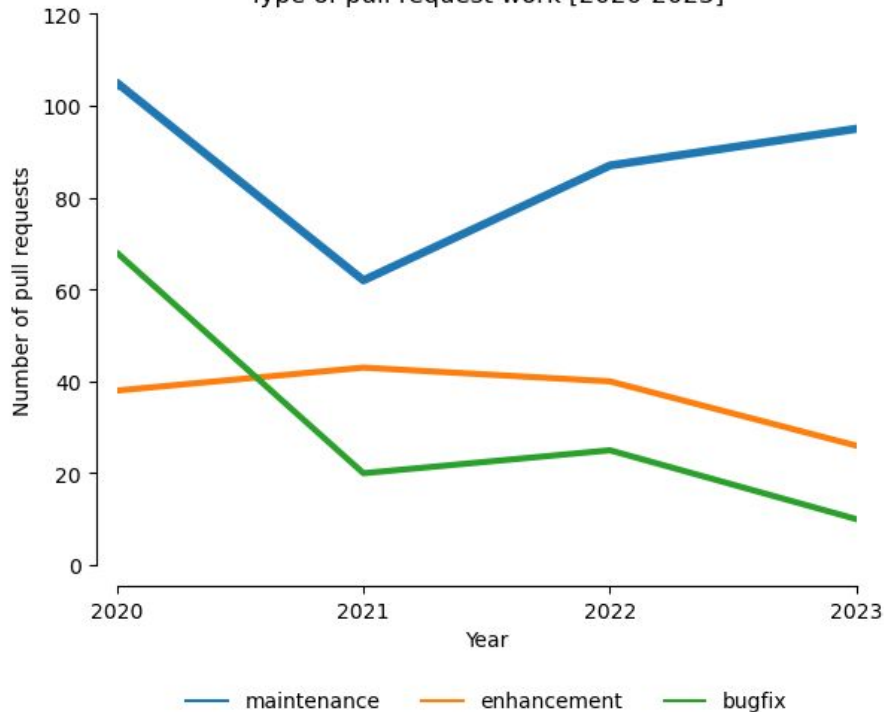

**Pull Requests are a direct indicator of developer activity**

- Most PRs make it to merged status
- Mostly sustained but slightly declining rate of contribution
- Peaks of activity near major releases (e.g. v1.0 in 2020)

# Health of the Project: Contributions - PRs

Type of pull request work [2020-2023]

## Breaking down contribution by type

- Maintenance
  - Work to keep up with ecosystem changes, continuous integration, deployment, etc..
- Enhancement
  - Addition of new features or improvement of existing ones
- Bugfix
  - Fixing pre-existing issues in codebase

# Health of the Project: Contributions - PRs

Type of pull request work [2020-2023]

## Breaking down contribution by type

- Note peak in 2020 due to v1.0 and 2.0 releases
  - Lots of historical code removals counted as maintenance
- Seeing a steady increase in maintenance over time
  - Ever rapidly changing ecosystem
  - Support for more OS, hardware, etc..
  - More code leads to more maintenance

# Health of the Project: Contributions - PRs

**Maintenance**

**Bugfix**

**Enhancement**

## Developer contribution diversity by type (2020-2023)

- Generally quite diverse contributor set for bug fixes and enhancements
- Maintenance tends to fall to a smaller set of contributors
  - ~ 75% of all contributions by 3 developers
  - Tend to be less glamorous & advertised tasks
    - Releases, CI, packaging, etc...

# Health of the Project: Funding

## Chan Zuckerberg Initiative grants:

*EOSS4: Faster, Extensible Molecular Analysis for Reproducible Science (2022)*

*EOSS5: Growing the MDAnalysis community sustainably (2023)*

## NSF CSSI Elements (upcoming):

*Streaming Molecular Dynamics Simulation Trajectories for Direct Analysis (2023+)*

## Smaller grants & funding sources:

### *NumFOCUS small development grants*

- Up to \$10,000, call opens three times a year
- Looking for project ideas!

### *Google Summer of Code / Season of Docs*

- Supports 1-2 new contributor projects per year

# Some key ongoing work

MDAnalysis has been quite busy over the years!

Some key ongoing areas of work:

- Towards a **faster** library
  - Low level code optimization
  - Analysis parallelisation
- Towards a **slimmer, more maintainable**, library
  - Building an ecosystem of packages through MDAKits
  - Migrating difficult to maintain codes out of the core library
  - License changes

# Towards a **faster** MDAnalysis: Cythonization

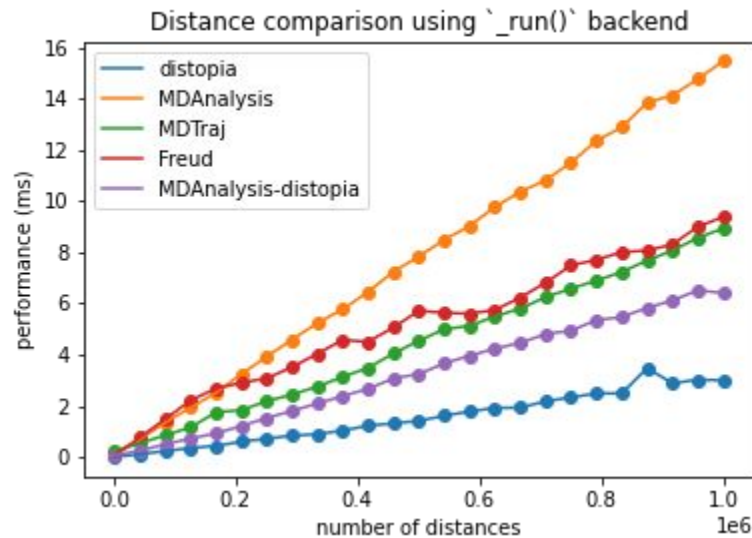

- Overcoming Python limitations
  - **Poor memory access** to underlying NumPy arrays
  - Hard to optimally leverage hardware features
- Ongoing work to **Cythonize key data structures**
  - Better C/C++ interface (libmdanalysis)
  - Timestep and other coordinate handling objects
  - Towards fast Cythonized readers & writers

# Towards a **faster** MDAnalysis: Distopia

- Stand-alone replacement for aging ``MDAnalysis.lib.distances``
- Heavily leverages **vector instructions**
- Showing a performance improvement of **4-10x**
- Currently an optional backend to library (v2.5+), will automatically switch in the future

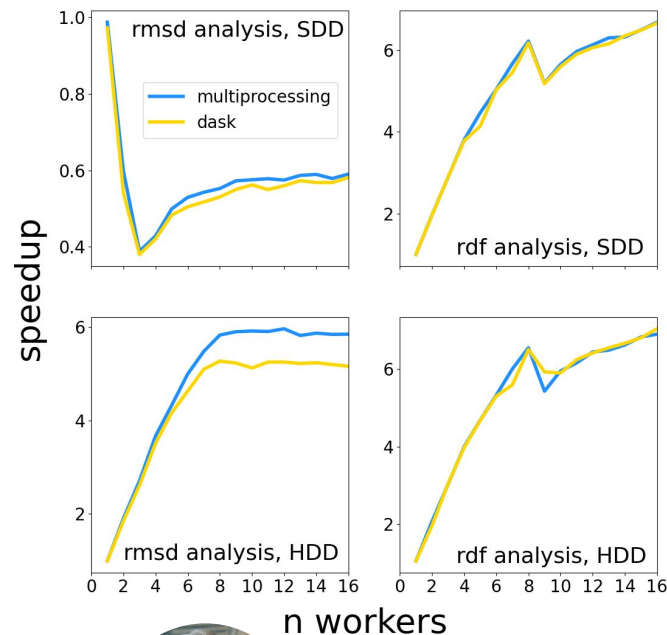

# Towards a **faster** MDAnalysis: Parallelisation

Leverage **multi-core parallelism** for analysis methods

- Enable analysis methods to directly leverage multicore parallelism backends (e.g. Dask and Multiprocessing)
  - Including cluster support
  - Quasi-invisible to users
- **5-8x** speedup when not IO-bound (e.g. SSD)

*See Egor's talk tomorrow afternoon!*

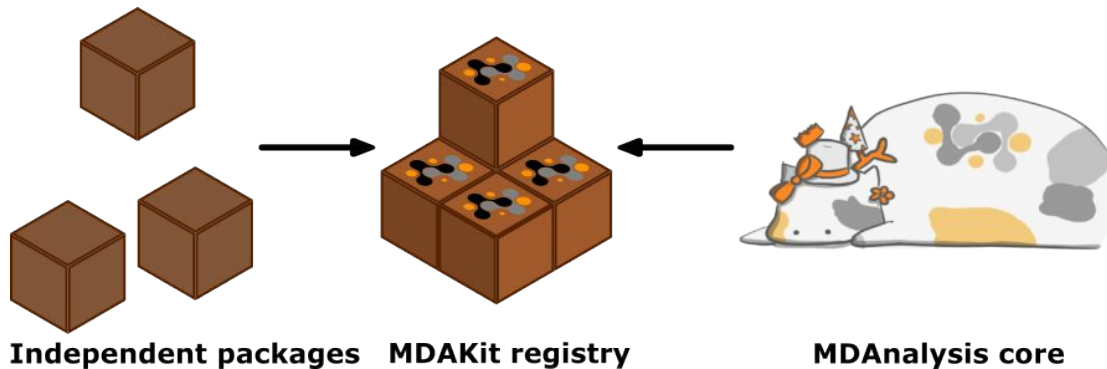

# Towards a **slimmer** MDAnalysis library

- Core library maintenance is becoming increasingly burdensome
  - Rapid Python & upstream release schedule (e.g. NEP29)
  - Many hardware flavours to support
- Adding new features is a slow and intensive process
  - Need to keep to strict packaging rules
  - Limited core developer knowledge
- Looking to de-bloat the MDAnalysis library by encouraging an ecosystem of MDAnalysis-using packages

# MDAnalysis Toolkits (MDAKits)

Providing tooling and documentation to support package developers

- Cookiecutter and Registry

*See Ian's talk tomorrow morning!*

<https://mdakits.mdanalysis.org/mdakits.html>

MDAKit	Keywords	Authors	CI badges
hole2-mdakit	pores, ion channels, transporters, HOLE	hole2-mdakit authors	latest develop passed
lipyds	lipids, membranes	lilyminium	latest develop passed
mda-tui	transformations, TUI	mda-tui authors	latest develop passed
mdachecker	structure analysis, conformation checks	IAlibay	latest develop passed
mdactl	command line interface, molecular-dynamics	mdactl authors	latest develop passed
mdaencore	ensemble, similarity, covariance, PCA	mdaencore authors	latest develop passed
openmm-mdanalysis-reporter	OpenMM, Reporters	openmm-mdanalysis-reporter authors	latest develop passed

# MDAnalysis' new MDAKits

- ***mdaccli***: a command-line interface to MDAnalysis Analysis classes
- ***solvation-analysis***: methods for analyzing the solvation structure of liquids
- ***membrane-curvature***: analysis of membrane curvatures
- ***transport-analysis***: tools for computing and analyzing transport properties

**Philip & Joao**  
@picocentauri  
@joaomcteixeira

**Orion**  
@orionarcher

**Estefania**  
@ojeda-e

**Xu Hong**  
@xhgchen

# Upcoming library changes

- Lowering the number of core dependencies
  - allowing smaller minimal packages
  - networkX, matplotlib, biopython
- Moving harder to maintain components to downstream packages
  - encore
  - HOLE2
  - waterdynamics
  - Converters
  - .. others?

*mdaencore*

*hole2-mdakit*

# Easier downstream development: relicensing!

- Current GNU Public License v2+ too restrictive
  - Copyleft applied on `import MDAnalysis`
  - Restricts licenses you can release under
- Starting the slow process of relicensing to LGPL v2.1+
  - Allow freedom of import
  - Retain copyleft for direct code changes
  - Will be contacting all historical developers
  - Email [licensing@mdanalysis.org](mailto:licensing@mdanalysis.org) for questions

*Read our latest blog post!*

# Other ongoing works

- Interoperability through converters
  - OpenMM, **RDKit**, Parmed
  - *Coming soon*: ASE, MDTraj, and OpenFF Tk
- Better guessers
  - Inferring from file format information (e.g. PDB)
  - Provide better clarity on guessed attributes
- New readers
  - New **auxiliary** readers (EDR, etc..)
  - Large XTC formats, various LAMMPS improvements, H5MD...

**Cedric**  
@cbouy

See Cedric's talk tomorrow!

**Aya**  
@aya9aladdin

**Bjarne**  
@BFedder

# Future plans: v3.0 and beyond

Join us at **tomorrow at 4 pm** for a discussion on MDAnalysis' future!

Some potential ideas:

- New data processing paradigms
  - cloud streaming, faster bond handling, ...
- Support for new analyses
  - DSSP, SASA, etc..
- Better chemical perception & consistency
  - Unit handling via *pint*, improved guessers, better cheminformatics
- Your own needs and ideas!

# Community building and engagement

MDAnalysis is not just about code!

- Mentorship programs
- Upcoming workshops!
  - October 25th - *sold out*
  - More later in the year (next ~ mid November)
  - Looking for tutors and partner projects!
- Next UGM in **2024!**

CompChemURG  
(The Binding Site)

# Getting involved

MDAnalysis is always looking for new contributors!

- Join in on user discussions and meetings!
- Submit issues
- Tackle of our many issues
- Create your own MDAKit
- Teach a workshop
- Participate in a mentorship program

*See Friday's Hackathon session  
for various ways to get started  
with contributing!*

***<https://github.com/MDAnalysis/UGM2023/tree/main/hackathon>***
