

# MONAPipe: Modular Natural Language Processing Pipeline for Digital Humanities

- natural language processing pipeline based on Python library spaCy<sup>1</sup>
- jointly developed by partners in Text+ task area Collections as a software service
- originally created in the project „Modes of Narration and Attribution“ (MONA)<sup>2</sup>

- part of the Text+ data processing pipelines portfolio
- with involvement of the Text+ task area Infrastructure Operations
- upcoming: Python Package and integration into Text+ infrastructure

custom component	implementation 1
default component	implementation 2 (transparency indicates implementation is in development or requires training)
implementation	implementation
